One needs the functions from `mathmlPlot` in `examples/`.

MathML.nw 1

```
1a  < * 1a>≡  
    inFile <- system.file("data/mathmlQuadratic.xml","XML")  
    d <- xmlTreeParse(inFile)  
    plot(1:10, type="n")  
    text(5,5, mathmlPlot(d))
```

```
1b  < 1b>≡  
    u <- xmlTreeParse("data/mathmlRoot.xml")  
    text(5,7,mathmlPlot(u))
```

```
1c  < 1b>+≡  
    u <- xmlTreeParse("data/mathmlSet.xml")  
    text(5,9,mathmlPlot(u))
```

```
< 1b>  
< * 1a>
```
