|                                             | <p>[<i>Example</i>: The horizontal and vertical coordinate space ranges from -100 to +100 because the coordinate space (coordsize) is 200 by 200 and the top left coordinate is (-100,-100). The (0,0) origin lies at the center of the shape's bounding box, as evidenced by the position of the shape's path within the coordinate space:</p> <pre>&lt;v:shape ... coordsize="200,200"   coordorigin="-100,-100"   path="m 0,0 l 0,50, 50,50, 50,0 x e"&gt; &lt;/v:shape&gt;</pre>  <p><i>end example</i>]</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                                                                                                                                                                                                                       |
| <b>coordsize</b><br>(Coordinate Space Size) | <p>Specifies the size of the shape's coordinate space in coordinate units. Default is "1000,1000".</p> <p>The physical size of a coordinate unit length is determined by both the size of the coordinate space (coordsize) and the size of the shape (style width and height). The coordsize attribute defines the number of horizontal and vertical subdivisions into which the shape's bounding box is divided. The combination of coordsize and style width/height effective scales the shape anisotropically.</p> <p>[<i>Example</i>: The path is 50 units wide and tall, which is 25% of the size of the coordinate space:</p> <pre>&lt;v:shape ... coordsize="200,200"   coordorigin="-100,-100"   path="m 0,0 l 0,50, 50,50, 50,0 x e"&gt; &lt;/v:shape&gt;</pre>  <p><i>end example</i>]</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p> |
| <b>cropbottom</b> (Image Bottom Crop)       | <p>Specifies the how much to crop the image from the bottom up as a fraction of picture size. Default is 0. This numeric value can also be specified in 1/65536-ths if a trailing "f" is supplied. For example, a value of "52429f" represents 52429/65536 or 0.8.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

|            |                          | <ul style="list-style-type: none"> <li>• page</li> <li>• text</li> <li>• line</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|            | mso-wrap-distance-bottom | Specifies the distance from the bottom of the shape to the text that wraps around it. Default is 0 pt. This property is different from the CSS margin property, which changes the origin of the shape to include the margin areas. This property does not change the origin.                                                                                                                                                                                                                                                        |
|            | mso-wrap-distance-left   | Specifies the distance from the left side of the shape to the text that wraps around it. Default is 0 pt. This property is different from the CSS margin property, which changes the origin of the shape to include the margin areas. This property does not change the origin.                                                                                                                                                                                                                                                     |
|            | mso-wrap-distance-right  | Specifies the distance from the right side of the shape to the text that wraps around it. Default is 0 pt. This property is different from the CSS margin property, which changes the origin of the shape to include the margin areas. This property does not change the origin.                                                                                                                                                                                                                                                    |
|            | mso-wrap-distance-top    | Specifies the distance from the top of the shape to the text that wraps around it. Default is 0 pt. This property is different from the CSS margin property, which changes the origin of the shape to include the margin areas. This property does not change the origin.                                                                                                                                                                                                                                                           |
|            | mso-wrap-edited          | Specifies whether the wrap coordinates were customized by the user. If the wrap coordinates are generated by an editor, this property is true; otherwise they were customized by a user. Default is false.                                                                                                                                                                                                                                                                                                                          |
|            | mso-wrap-style           | <p>Specifies the wrapping mode for text in shapes in WordprocessingML documents. Default is square. Allowed values are:</p> <ul style="list-style-type: none"> <li>• square - Wraps text inside the shape in a square.</li> <li>• none - Text does not wrap.</li> </ul>                                                                                                                                                                                                                                                             |
|            | position                 | <p>Specifies the kind of positioning used to place an element. Default is static. When the element is contained inside a group, this property shall be absolute. Allowed values are:</p> <ul style="list-style-type: none"> <li>• static - The element is positioned according to the normal flow of the page. The top and left properties are ignored. If the object is anchored inline, this value is used.</li> <li>• absolute - The element is positioned relative to the parent, using the top and left properties.</li> </ul> |

| Attributes | Description |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|------------|-------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|            |             | <ul style="list-style-type: none"> <li>• <b>relative</b> - The element is positioned according to the normal flow of the page, but the top and left properties are used. The overlap of overlapping elements is governed by the z-index property.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|            | rotation    | Specifies the angle that a shape is rotated, in degrees. Default is 0. Positive angles are clockwise.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|            | top         | <p>Specifies the position of the top of the containing block of the shape relative to the element above it in the flow of the page. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. This property shall not be used for shapes anchored inline. Allowed values are:</p> <ul style="list-style-type: none"> <li>• <b>auto</b> - Default position of an element in the flow of the page.</li> <li>• <b>&lt;units&gt;</b>- A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• <b>&lt;percentage&gt;</b>- Value expressed as a percentage of the parent object's height.</li> </ul> |
|            | visibility  | <p>Specifies whether a shape is displayed. Only <b>inherit</b> and <b>hidden</b> are used; any other values are mapped to <b>inherit</b>. Default is <b>inherit</b>. Allowed values are:</p> <ul style="list-style-type: none"> <li>• <b>hidden</b> - The shape is not visible, but is still part of the flow of the objects in the browser. Mouse events are not processed.</li> <li>• <b>inherit</b> - The visibility state is inherited from the parent of the shape.</li> </ul>                                                                                                                                                                                                                                                                                              |
|            | width       | <p>Specifies the width of the containing block of the shape. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. Allowed values are:</p> <ul style="list-style-type: none"> <li>• <b>auto</b> - Default position of an element in the flow of the page.</li> <li>• <b>&lt;units&gt;</b>- A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• <b>&lt;percentage&gt;</b>- Value expressed as a percentage of the parent object's width.</li> </ul>                                                                                                                                     |
|            | z-index     | <p>Specifies the display order of overlapping shapes. Default is 0. This property shall not be used for shapes anchored inline. Allowed values are:</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |

| Attributes | Description                                                                 |                                                                                                                                                                                                                                                                                                                                                                                                                         |

| <p>title (Shape Title)</p>                                                                              | <p>Specifies the text displayed when the mouse pointer moves over the shape. Default is no value.</p> <p>[Example:</p> <pre>&lt;v:shape ... title="tooltip" ... &gt; &lt;/v:shape&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                                                                                       |
| <p>userdrawn (Exists In Master Slide)</p> <p>Namespace:<br/>urn:schemas-microsoft-com:office:office</p> | <p>Specifies whether the user has added the shape to a master slide. Default is false. Used by PresentationML.</p> <p>[Example:</p> <pre>&lt;v:shape ... o:userdrawn="true" ... &gt; &lt;/v:shape&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p>                                                                                                                                 |
| <p>userhidden (Hide Script Anchors)</p> <p>Namespace:<br/>urn:schemas-microsoft-com:office:office</p>   | <p>Specifies whether a script anchor is hidden. Default is false. If true, script anchors stay hidden even if the shape is otherwise visible. A script anchor is the visual representation of a script that when displayed in an application.</p> <p>[Example:</p> <pre>&lt;v:shape ... o:userhidden="true" ... &gt; &lt;/v:shape&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p> |
| <p>wrapcoords (Shape Bounding Polygon)</p>                                                              | <p>Specifies the bounding polygon that surrounds a shape. This is specified using a comma-delimited list of x and y coordinates: "x1,y1,x2,y2,x3,y3,..." This is used when text is</p>                                                                                                                                                                                                                                                                                        |

| Attributes | Description                                                                                                                                                                                                                                                                                                                                                                      |
|------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|            | <p>tightly wrapped around a shape. Default is no value until the mso-wrap-mode style attribute is set to <i>tight</i> or <i>through</i>.</p> <p>[Example:</p> <pre>&lt;v:shape ...   wrapcoords="0,0 0,200, 200,200, 200,0" ... &gt; &lt;/v:shape&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p> |

[Note: The W3C XML Schema definition of this element's content model ([CT\\_Image](#)) is located in §A.6.1. end note]

#### 19.1.2.11 imagedata (Image Data)

This element is used to draw an image that has been loaded from an external source. There is an implied rectangle that is the same size as the image. Any stroke or fill is applied to this implied rectangle. The stroke is drawn on top of the image. The fill is behind the image and therefore only visible through transparent areas of the image. Image transparency is either encoded in the file or defined via a color value using the chromakey attribute. Unlike the image element (§19.1.2.10), the imagedata element shall have a parent element.

[Example:

```
<v:shape style="position:relative;top:1;left:1;width:50;height:50"
  path="m 0,0 l 1000,0 1000,1000 0,1000 x e" fillcolor="blue">
  <v:imagedata src="myimage.gif"/>
</v:shape>
```

end example]

| cliptowrap (Clip to Wrapping Polygon)<br><br>Namespace:<br>urn:schemas-microsoft-com:office:office | <p>Specifies that the clipping region for the shape aligns with the wrapping polygon that tightly surrounds the entire shape (essentially, that the shape shall not be drawn beyond its wrapping polygon's extents – if it does, the shape shall be clipped). Default is false.</p> <p>[Example:</p> <pre>&lt;v:shape ... o:cliptowrap="true"&gt; &lt;/v:shape&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p>                                                                                                                                                                                                                                                                                                                                                                            |
| connectortype (Shape Connector Type)<br><br>Namespace:<br>urn:schemas-microsoft-com:office:office  | <p>Specifies the kind of connector used for joining shapes. Default is straight.</p> <p>[Example:</p> <pre>&lt;v:shape ... o:connectortype="elbow" ... &gt; &lt;/v:shape&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_ConnectorType simple type (§19.2.3.7).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
| coordorigin (Coordinate Space Origin)                                                              | <p>Specifies the coordinate of the top left corner of the shape's coordinate space. This determines the position of the (0,0) coordinate space origin within the shape's bounding box. Default is "0,0", which places the (0,0) origin at the top left corner of the bounding box.</p> <p>This affects shape properties that specify coordinate positions, such as the path attribute. Thus a path can be defined against a generic (0,0) origin and the coordorigin value translates the entire path within the shape's bounding space.</p> <p>[Example: The horizontal and vertical coordinate space ranges from -100 to +100 because the coordinate space (coordsize) is 200 by 200 and the top left coordinate is (-100,-100). The (0,0) origin lies at the center of the shape's bounding box, as evidenced by the position of the shape's path within the coordinate space:</p> |

Default is true.</p> <p>[Example:</p> <pre>&lt;v:shape ... print="false" ... &gt; &lt;/v:shape&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p>                                                                                                                                                                                                                         |
| <p>regroupid (Regroup ID)</p> <p>Namespace:<br/>urn:schemas-microsoft-com:office:office</p>                  | <p>Specifies a previous group for a shape. An ID number is used to identify groups of shapes that are no longer grouped. This allows shapes to be regrouped programmatically.</p> <p>[Example: The shape was part of a group identified by the ID 040754:</p> <pre>&lt;v:shape ... o:regroupid="040754" ... &gt; &lt;/v:shape&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the W3C XML Schema integer datatype.</p>                                          |
| <p>spid (Optional String)</p> <p>Namespace:<br/>urn:schemas-microsoft-com:office:office</p>                  | <p>Specifies an optional string that an application can use to identify the particular shape. Default is no value.</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                                                                                                                                                                                                                |
| <p>spt (Optional Number)</p>                                                                                 | <p>Specifies an optional number that an application can use to associate the particular shape with a defined shape type. Default is 0.</p>                                                                                                                                                                                                                                                                                                                                                             |

| Attributes                                            | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|-------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Namespace:<br>urn:schemas-microsoft-com:office:office | The possible values for this attribute are defined by the W3C XML Schema float datatype.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| strokecolor (Shape Stroke Color)                      | <p>Specifies the primary color of the brush to use to stroke the path of the shape. Default is black. The color attribute of the stroke element (§19.1.2.21) overrides this. Colors are typically specified as either a named color, such as red, or six hexadecimal digits representing the red, green and blue values of the color, such as #00FF30. Full details are specified in the simple type description.</p> <p>[Example:</p> <pre>&lt;v:shape ... strokecolor="red" ...&gt; &lt;/v:shape&gt;</pre>  <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_ColorType simple type (§20.1.2.3).</p> |
| stroked (Shape Stroke Toggle)                         | <p>Specifies whether the path defining the shape is stroked with a solid line. The stroke element (§19.1.2.21) defines other strokes. The on attribute of the stroke element overrides this attribute. Default is true.</p> <p>[Example:</p> <pre>&lt;v:shape ... fillcolor="red"   stroked="false" strokecolor="blue"...&gt; &lt;/v:shape&gt;</pre>  <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p>                                                                                                                                                       |
| strokeweight (Shape Stroke Weight)                    | <p>Specifies the width of the brush to use to stroke the path. Default is 1 point. If a number is given without units, the emu is used. The weight attribute of the stroke element (§19.1.2.21) overrides this attribute.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| Attributes                       | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |          |             |      |                                                                                                                                                                                                                                                                                                                                                                                            |        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

| style (Shape Styling Properties) | <p>Specifies the CSS2 styling properties of the shape. The CSS2 (Cascading Style Sheets, Level 2) specification, a Recommendation of the World Wide Web Consortium, is available here: <a href="http://www.w3.org/TR/REC-CSS2">http://www.w3.org/TR/REC-CSS2</a>.</p> <p>This attribute uses a semi-colon delimited list of “name:value” pairs, the syntax defined by section 4.1.8 of the CSS2 specification for grouped declarations (without the surrounding braces). The following tables define the allowed properties and the VML treatment of each.</p> <p>[Example:</p> <pre>&lt;v:shape ... style='position:absolute;width:100pt;height:50pt' ... &gt; &lt;/v:shape&gt;</pre> <p>end example]</p> <table border="1" data-bbox="415 1251 1481 1862"> <thead> <tr> <th data-bbox="415 1251 664 1297">Property</th><th data-bbox="664 1251 1481 1297">Description</th></tr> </thead> <tbody> <tr> <td data-bbox="415 1297 664 1566">flip</td><td data-bbox="664 1297 1481 1566"> <p>Specifies that the orientation of a shape is flipped. Default is no value. Allowed values are:</p> <ul style="list-style-type: none"> <li>• x - Flip along the y-axis, reversing the x-coordinates.</li> <li>• y - Flip along the x-axis, reversing the y-coordinates.</li> <li>• xy - Flip along both the y- and x-axis.</li> <li>• yx - Flip along both the x- and y-axis.</li> </ul> </td></tr> <tr> <td data-bbox="415 1566 664 1862">height</td><td data-bbox="664 1566 1481 1862"> <p>Specifies the height of the containing block of the shape. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt;- A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or</li> </ul> </td></tr> </tbody> </table> | Property | Description | flip | <p>Specifies that the orientation of a shape is flipped. Default is no value. Allowed values are:</p> <ul style="list-style-type: none"> <li>• x - Flip along the y-axis, reversing the x-coordinates.</li> <li>• y - Flip along the x-axis, reversing the y-coordinates.</li> <li>• xy - Flip along both the y- and x-axis.</li> <li>• yx - Flip along both the x- and y-axis.</li> </ul> | height | <p>Specifies the height of the containing block of the shape. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt;- A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or</li> </ul> |
| Property                         | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |          |             |      |                                                                                                                                                                                                                                                                                                                                                                                            |        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| flip                             | <p>Specifies that the orientation of a shape is flipped. Default is no value. Allowed values are:</p> <ul style="list-style-type: none"> <li>• x - Flip along the y-axis, reversing the x-coordinates.</li> <li>• y - Flip along the x-axis, reversing the y-coordinates.</li> <li>• xy - Flip along both the y- and x-axis.</li> <li>• yx - Flip along both the x- and y-axis.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |          |             |      |                                                                                                                                                                                                                                                                                                                                                                                            |        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

|            | mso-position-horizontal          | <p>Specifies the horizontal positioning data for objects in WordprocessingML documents. Default is absolute. Allowed values are:</p> <ul style="list-style-type: none"> <li>• absolute</li> <li>• left</li> <li>• center</li> <li>• right</li> <li>• inside</li> <li>• outside</li> </ul>                                                                                                                                                                                                                                                                                                                                                                           |
|            | mso-position-horizontal-relative | <p>Specifies relative horizontal position data for objects in WordprocessingML documents. This modifies the mso-position-horizontal property. Default is text. Allowed values are:</p> <ul style="list-style-type: none"> <li>• margin</li> <li>• page</li> <li>• text</li> <li>• char</li> </ul>                                                                                                                                                                                                                                                                                                                                                                   |
|            | mso-position-vertical            | <p>Specifies the vertical positioning data for objects in WordprocessingML documents. Default is absolute. Allowed values are:</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| Attributes | Description                    |                                                                                                                                                                                                                                                                                               |
|------------|--------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|            |                                | <ul style="list-style-type: none"> <li>• absolute</li> <li>• top</li> <li>• center</li> <li>• bottom</li> <li>• inside</li> <li>• outside</li> </ul>                                                                                                                                          |
|            | mso-position-vertical-relative | <p>Specifies relative vertical position data for objects in WordprocessingML documents. This modifies the mso-position-vertical property. Default is text. Allowed values are:</p> <ul style="list-style-type: none"> <li>• margin</li> <li>• page</li> <li>• text</li> <li>• line</li> </ul> |
|            | mso-wrap-distance-bottom       | <p>Specifies the distance from the bottom of the shape to the text that wraps around it. Default is 0 pt. This property is different from the CSS margin property, which changes the origin of the shape to include the margin areas. This property does not change the origin.</p>           |
|            | mso-wrap-distance-left         | <p>Specifies the distance from the left side of the shape to the text that wraps around it. Default is 0 pt. This property is different from the CSS margin property, which changes the origin of the shape to include the margin areas. This property does not change the origin.</p>        |
|            | mso-wrap-distance-right        | <p>Specifies the distance from the right side of the shape to the text that wraps around it. Default is 0 pt. This property is different from the CSS margin property, which changes the origin of the shape to include the margin areas. This property does not change the origin.</p>       |
|            | mso-wrap-distance-top          | <p>Specifies the distance from the top of the shape to the text that wraps around it. Default is 0 pt. This property is different from the CSS margin property, which changes the origin of the shape to include the margin areas. This property does not change the origin.</p>              |
|            | mso-wrap-edited                | <p>Specifies whether the wrap coordinates were customized by the user. If the wrap coordinates are generated by an editor, this property is true; otherwise they were customized by a user. Default is false.</p>                                                                             |
|            | mso-wrap-style                 | <p>Specifies the wrapping mode for text in shapes in WordprocessingML documents. Default is square. Allowed</p>                                                                                                                                                                               |

| Attributes | Description |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|------------|-------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|            |             | <p>values are:</p> <ul style="list-style-type: none"> <li>• square - Wraps text inside the shape in a square.</li> <li>• none - Text does not wrap.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|            | position    | <p>Specifies the kind of positioning used to place an element. Default is <i>static</i>. When the element is contained inside a group, this property shall be <i>absolute</i>. Allowed values are:</p> <ul style="list-style-type: none"> <li>• <i>static</i> - The element is positioned according to the normal flow of the page. The <i>top</i> and <i>left</i> properties are ignored. If the object is anchored inline, this value is used.</li> <li>• <i>absolute</i> - The element is positioned relative to the parent, using the <i>top</i> and <i>left</i> properties.</li> <li>• <i>relative</i> - The element is positioned according to the normal flow of the page, but the <i>top</i> and <i>left</i> properties are used. The overlap of overlapping elements is governed by the <i>z-index</i> property.</li> </ul> |
|            | rotation    | <p>Specifies the angle that a shape is rotated, in degrees. Default is 0. Positive angles are clockwise.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|            | top         | <p>Specifies the position of the top of the containing block of the shape relative to the element above it in the flow of the page. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. This property shall not be used for shapes anchored inline. Allowed values are:</p> <ul style="list-style-type: none"> <li>• <i>auto</i> - Default position of an element in the flow of the page.</li> <li>• <i>&lt;units&gt;</i> - A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• <i>&lt;percentage&gt;</i> - Value expressed as a percentage of the parent object's height.</li> </ul>                                                   |
|            | visibility  | <p>Specifies whether a shape is displayed. Only <i>inherit</i> and <i>hidden</i> are used; any other values are mapped to <i>inherit</i>. Default is <i>inherit</i>. Allowed values are:</p> <ul style="list-style-type: none"> <li>• <i>hidden</i> - The shape is not visible, but is still part of the flow of the objects in the browser. Mouse events are not processed.</li> <li>• <i>inherit</i> - The visibility state is inherited from the parent of the shape.</li> </ul>                                                                                                                                                                                                                                                                                                                                                  |

| Attributes                                                                         | Description    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |

|                                                                                    | width          | <p>Specifies the width of the containing block of the shape. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt;- A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's width.</li> </ul> |
|                                                                                    | z-index        | <p>Specifies the display order of overlapping shapes. Default is 0. This property shall not be used for shapes anchored inline. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Uses the order that the shapes appear in the page, bottom to top.</li> <li>• &lt;order&gt;- A number that represents the stacking precedence. Shapes with higher numbers are placed on top of those with lower numbers. Negative numbers are allowed.</li> </ul>                                                                                                                                                |
| <p>The following properties are only used by the textbox element (§19.1.2.22):</p> |                |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|                                                                                    | Property       | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|                                                                                    | direction      | <p>Specifies the direction of the text in the textbox. Default is ltr. This property is superseded by the mso-direction-alt property if that is specified. Allowed values are:</p> <ul style="list-style-type: none"> <li>• ltr - Text is displayed left-to-right.</li> <li>• rtl - Text is displayed right-to-left.</li> </ul>                                                                                                                                                                                                                                                                                         |
|                                                                                    | layout-flow    | <p>Determines the flow of the text layout in a textbox. Default is horizontal. Allowed values are:</p> <ul style="list-style-type: none"> <li>• horizontal - Text is displayed horizontally.</li> <li>• vertical - Text is displayed vertically.</li> <li>• vertical-ideographic - Ideographic text is displayed vertically.</li> <li>• horizontal-ideographic - Ideographic text is displayed horizontally.</li> </ul>                                                                                                                                                                                                 |
|                                                                                    | mso-direction- | <p>Specifies an alternate direction for text in textboxes. Overrides</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| Attributes                                                                   | Description           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|------------------------------------------------------------------------------|-----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                              | alt                   | the direction property. The only allowed value is context.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|                                                                              | mso-fit-shape-to-text | Specifies whether the shape stretches to fit the text in the textbox. Default is false.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|                                                                              | mso-fit-text-to-shape | Specifies whether the text stretches to fit the textbox. Default is false.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|                                                                              | mso-layout-flow-alt   | Specifies the alternate layout flow for text in textboxes. This property is used instead of layout-flow when the layout flow is from bottom to top for non-ideographic languages. Its only value is bottom-to-top.                                                                                                                                                                                                                                                                                                                                                                         |
|                                                                              | mso-next-textbox      | Specifies the ID of the next textbox in a series. Used to keep track of a set of linked textboxes. Default is no value.                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|                                                                              | mso-rotate            | <p>Specifies a specific rotation value for text in a textbox. Default is 0. Allowed values are:</p> <ul style="list-style-type: none"> <li>• 0</li> <li>• 90</li> <li>• 180</li> <li>• -90</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                      |
|                                                                              | mso-text-scale        | Specifies the scaling factor for fitting text to shapes. Default is 0. This property is only used if mso-fit-text-to-shape is true.                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|                                                                              | v-text-anchor         | <p>Specifies the vertical anchoring of text in a textbox. Default is top. The alignment of a text anchor only becomes evident if mso-fit-text-to-shape is false. This property is different from the vertical-align CSS property, which is used for ideographic languages. Allowed values are:</p> <ul style="list-style-type: none"> <li>• top</li> <li>• middle</li> <li>• bottom</li> <li>• top-center</li> <li>• middle-center</li> <li>• bottom-center</li> <li>• top-baseline</li> <li>• bottom-baseline</li> <li>• top-center-baseline</li> <li>• bottom-center-baseline</li> </ul> |
| The following properties are only used by the textpath element (§19.1.2.23): |                       |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| Attributes | Description          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |       |             |        |                      |         |     |     |     |     |      |                  |

|            | Property             | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |       |             |        |                      |         |     |     |     |     |      |                  |
|            | font                 | Specifies a compound value of font settings. Default is no value. The values are the same as those of the CSS font property. The order of definitions in the string is: font-style, font-variant, font-weight, font-size, line-height, font-family.                                                                                                                                                                                                                                      |       |             |        |                      |         |     |     |     |     |      |                  |
|            | font-family          | Specifies the family of the font. Default is no value. The values are the same as those of the CSS font-family property.                                                                                                                                                                                                                                                                                                                                                                 |       |             |        |                      |         |     |     |     |     |      |                  |
|            | font-size            | Specifies the size of the font. Default is no value. The font size is defined in points. The values are the same as those of the CSS font-size property.                                                                                                                                                                                                                                                                                                                                 |       |             |        |                      |         |     |     |     |     |      |                  |
|            | font-style           | Specifies the amount of slant for a font. Default is normal. The values are the same as those of the CSS font-style property. Allowed values are: <ul style="list-style-type: none"><li>normal</li><li>italic</li><li>oblique - Treated the same as italic.</li></ul>                                                                                                                                                                                                                    |       |             |        |                      |         |     |     |     |     |      |                  |
|            | font-variant         | Specifies the variant style of a font. Default is normal. The values are the same as those of the CSS font-variant property. Allowed values are: <ul style="list-style-type: none"><li>normal</li><li>small-caps</li></ul>                                                                                                                                                                                                                                                               |       |             |        |                      |         |     |     |     |     |      |                  |
|            | font-weight          | Specifies the thickness of the letters of the font. Default is normal. The values are the same as those of the CSS font-weight property. Allowed values are: <table><tr><th>Value</th><th>Description</th></tr><tr><td>normal</td><td rowspan="6">Treated as non-bold.</td></tr><tr><td>lighter</td></tr><tr><td>100</td></tr><tr><td>200</td></tr><tr><td>300</td></tr><tr><td>400</td></tr><tr><td>bold</td><td rowspan="2">Treated as bold.</td></tr><tr><td>bolder</td></tr></table> | Value | Description | normal | Treated as non-bold. | lighter | 100 | 200 | 300 | 400 | bold | Treated as bold. |
| Value      | Description          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |       |             |        |                      |         |     |     |     |     |      |                  |

| bolder     |                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |       |             |        |                      |         |     |     |     |     |      |                  |

| Attributes            | Description |                                                                                                                                                                                                                                                                                                                                                   |
|-----------------------|-------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                       |             | <div>500</div> <div>600</div> <div>700</div> <div>800</div> <div>900</div>                                                                                                                                                                                                                                                                        |
| mso-text-shadow       |             | Specifies whether a shadow is applied to the text on a text path. Default is false.                                                                                                                                                                                                                                                               |
| text-decoration       |             | <p>Specifies the style of text decoration. Default is none. The values are the same as those of the CSS text-decoration property. Allowed values are:</p> <ul style="list-style-type: none"> <li>• none</li> <li>• underline</li> <li>• overline</li> <li>• line-through</li> <li>• blink</li> </ul>                                              |
| v-rotate-letters      |             | Specifies whether the letters of the text are rotated counterclockwise by 90 degrees. Default is false.                                                                                                                                                                                                                                           |
| v-same-letter-heights |             | Specifies whether all letters are the same height regardless of initial case. If true, the lowercase letters are stretched to the height of the uppercase letters. Default is false.                                                                                                                                                              |
| v-text-align          |             | <p>Specifies the alignment of text. Default is left. Allowed values are:</p> <ul style="list-style-type: none"> <li>• left</li> <li>• right</li> <li>• center</li> <li>• justify</li> <li>• letter-justify - Distributes the extra space between the letters.</li> <li>• stretch-justify - Stretches the letters to fill in the space.</li> </ul> |
| v-text-kern           |             | Specifies whether kerning is turned on. Default is false.                                                                                                                                                                                                                                                                                         |
| v-text-reverse        |             | Specifies whether the layout order of rows is reversed. Default is false. This is used for vertical text layout.                                                                                                                                                                                                                                  |
| v-text-               |             | Specifies the mode for letter spacing. Default is tightening. This property determines whether space is removed between                                                                                                                                                                                                                           |

| Attributes                        | Description                                                                                                                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                  |       |             |              |                                                                                  |        |                                                                                                 |
|-----------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------|-------------|--------------|----------------------------------------------------------------------------------|--------|-------------------------------------------------------------------------------------------------|
|                                   | spacing-mode                                                                                                                                                                                                                                                                                                                                                                                                             | each letter (tightening) or added between each letter (tracking). The amount of letter spacing change is defined by the v-text-spacing property. Allowed values are: <ul style="list-style-type: none"><li>tightening</li><li>tracking</li></ul> |       |             |              |                                                                                  |        |                                                                                                 |
|                                   | v-text-spacing                                                                                                                                                                                                                                                                                                                                                                                                           | Specifies the amount of spacing for text in 100ths of single line spacing. Default is 100.                                                                                                                                                       |       |             |              |                                                                                  |        |                                                                                                 |
|                                   | The line (§19.1.2.12), polyline (§19.1.2.15) and curve (§19.1.2.3) elements ignore the following properties: <ul style="list-style-type: none"><li>top</li><li>left</li><li>width</li><li>height</li></ul>                                                                                                                                                                                                               |                                                                                                                                                                                                                                                  |       |             |              |                                                                                  |        |                                                                                                 |
|                                   | The following properties are not inherited by an element that references a shapetype element (§19.1.2.20) via the id attribute: <ul style="list-style-type: none"><li>flip</li><li>height</li><li>left</li><li>margin-left</li><li>margin-top</li><li>position</li><li>rotation</li><li>top</li><li>visibility</li><li>width</li><li>z-index</li></ul>                                                                   |                                                                                                                                                                                                                                                  |       |             |              |                                                                                  |        |                                                                                                 |
|                                   | The possible values for this attribute are defined by the W3C XML Schema string datatype.                                                                                                                                                                                                                                                                                                                                |                                                                                                                                                                                                                                                  |       |             |              |                                                                                  |        |                                                                                                 |
| target (Hyperlink Display Target) | Specifies a frame or window that a URL is displayed in. Default is no value. Allowed values are: <table><tr><th>Value</th><th>Description</th></tr><tr><td>&lt;targetname&gt;</td><td>String containing the name of the frame or window in which to load the document.</td></tr><tr><td>_blank</td><td>Specifies that the linked document is loaded into a new blank window. This window is not named.</td></tr></table> |                                                                                                                                                                                                                                                  | Value | Description | <targetname> | String containing the name of the frame or window in which to load the document. | _blank | Specifies that the linked document is loaded into a new blank window. This window is not named. |
| Value                             | Description                                                                                                                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                  |       |             |              |                                                                                  |        |                                                                                                 |
| <targetname>                      | String containing the name of the frame or window in which to load the document.                                                                                                                                                                                                                                                                                                                                         |                                                                                                                                                                                                                                                  |       |             |              |                                                                                  |        |                                                                                                 |
| _blank                            | Specifies that the linked document is loaded into a new blank window. This window is not named.                                                                                                                                                                                                                                                                                                                          |                                                                                                                                                                                                                                                  |       |             |              |                                                                                  |        |                                                                                                 |

[Note: The W3C XML Schema definition of this element's content model ([CT\\_Line](#)) is located in §A.6.1. *end note*]

#### 19.1.2.13 oval (Oval)

This element draws an oval sized according to the CSS2 style content width and height.

[Example:

```
<v:oval fillcolor="blue"
  style="position:relative;top:1;left:1;width:150;height:50">
</v:oval>
```

*end example]*

| coordorigin<br>(Coordinate Space Origin)                                                                     | <p>Specifies the coordinate of the top left corner of the shape's coordinate space. This determines the position of the (0,0) coordinate space origin within the shape's bounding box. Default is "0,0", which places the (0,0) origin at the top left corner of the bounding box.</p> <p>This affects shape properties that specify coordinate positions, such as the path attribute. Thus a path can be defined against a generic (0,0) origin and the coordorigin value translates the entire path within the shape's bounding space.</p> <p>[Example: The horizontal and vertical coordinate space ranges from -100 to +100 because the coordinate space (coordsize) is 200 by 200 and the top left coordinate is (-100,-100). The (0,0) origin lies at the center of the shape's bounding box, as evidenced by the position of the shape's path within the coordinate space:</p> <pre>&lt;v:shape ... coordsize="200,200" coordorigin="-100,-100" path="m 0,0 l 0,50, 50,50, 50,0 x e"&gt; &lt;/v:shape&gt;</pre> <div data-bbox="415 1610 516 1711" data-label="Image"> </div> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p> |

| Attributes                                                     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|----------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>coordsize</b><br>(Coordinate Space Size)                    | <p>Specifies the size of the shape's coordinate space in coordinate units. Default is "1000,1000".</p> <p>The physical size of a coordinate unit length is determined by both the size of the coordinate space (coordsize) and the size of the shape (style width and height). The coordsize attribute defines the number of horizontal and vertical subdivisions into which the shape's bounding box is divided. The combination of coordsize and style width/height effective scales the shape anisotropically.</p> <p>[Example: The path is 50 units wide and tall, which is 25% of the size of the coordinate space:</p> <pre>&lt;v:shape ... coordsize="200,200"   coordorigin="-100,-100"   path="m 0,0 l 0,50, 50,50, 50,0 x e"&gt; &lt;/v:shape&gt;</pre>  <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p> |
| <b>dgmlayout</b><br>(Diagram Node Layout Identifier)           | <p>Specifies the kind of automatic layout to apply to the diagram node. This is only meaningful if the shape is a node in an organization chart, which is denoted by the orgchart value of the editas attribute of the group element.</p> <p>[Example:</p> <pre>&lt;v:shape ... dgmlayout="1"&gt; &lt;/v:shape&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_DiagramLayout simple type (§19.2.3.10).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>dgmlayoutmru</b><br>(Diagram Node Recent Layout Identifier) | <p>Specifies the kind of automatic layout most recently used on the child elements of the diagram node. This is only meaningful if the shape is a node in an organization chart, which is denoted by the orgchart value of the editas attribute of the group element.</p> <p>[Example:</p> <pre>&lt;v:shape ... dgmlayout="1"&gt; &lt;/v:shape&gt;</pre>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| Attributes                                                                                                                    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |

| <p>fillcolor (Fill Color)</p>                                                                                                 | <p>Specifies the color to use for the fill. Default is white. If the fill element (§19.1.2.5) is present, its color attribute takes precedence. Colors are typically specified as either a named color, such as red, or six hexadecimal digits representing the red, green and blue values of the color, such as #00FF30. Full details are specified in the simple type description.</p> <p>[Example: This shape is red if its fill is visible:</p> <pre>&lt;v:shape ... fillcolor="red" ... &gt; &lt;/v:shape&gt;</pre> <p>This is equivalent to:</p> <pre>&lt;v:shape ... fillcolor="#ff0000" ... &gt; &lt;/v:shape&gt;</pre> <p><i>end example]</i></p> |

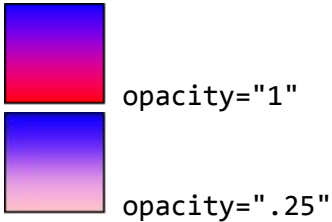

| Attributes                                                                                            | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                  |

| strokeweight<br>(Shape Stroke Weight) | <p>Specifies the width of the brush to use to stroke the path. Default is 1 point. If a number is given without units, the emu is used. The weight attribute of the stroke element (§19.1.2.21) overrides this attribute.</p> <p>[Example:</p> <pre>&lt;v:shape ... strokeweight="3pt" ... &gt; &lt;/v:shape&gt;</pre>  <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                                                                                                                                                                                                                                                                                                      |          |             |
| style (Shape Styling Properties)      | <p>Specifies the CSS2 styling properties of the shape. The CSS2 (Cascading Style Sheets, Level 2) specification, a Recommendation of the World Wide Web Consortium, is available here: <a href="http://www.w3.org/TR/REC-CSS2">http://www.w3.org/TR/REC-CSS2</a>.</p> <p>This attribute uses a semi-colon delimited list of “name:value” pairs, the syntax defined by section 4.1.8 of the CSS2 specification for grouped declarations (without the surrounding braces). The following tables define the allowed properties and the VML treatment of each.</p> <p>[Example:</p> <pre>&lt;v:shape ... style='position:absolute;width:100pt;height:50pt' ... &gt; &lt;/v:shape&gt;</pre> <p><i>end example]</i></p> <table border="1" data-bbox="414 1822 1477 1871"> <thead> <tr> <th data-bbox="414 1822 662 1871">Property</th><th data-bbox="662 1822 1477 1871">Description</th></tr> </thead> </table> | Property | Description |
| Property                              | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |          |             |

| Attributes | Description   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|------------|---------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|            | flip          | <p>Specifies that the orientation of a shape is flipped. Default is no value. Allowed values are:</p> <ul style="list-style-type: none"> <li>• x - Flip along the y-axis, reversing the x-coordinates.</li> <li>• y - Flip along the x-axis, reversing the y-coordinates.</li> <li>• xy - Flip along both the y- and x-axis.</li> <li>• yx - Flip along both the x- and y-axis.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                     |
|            | height        | <p>Specifies the height of the containing block of the shape. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt;- A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's height.</li> </ul>                                                                                                                                      |
|            | left          | <p>Specifies the position of the left of the containing block of the shape relative to the element left of it in the flow of the page. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. This property shall not be used for shapes anchored inline. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt; - A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's width.</li> </ul> |
|            | margin-bottom | <p>Specifies the position of the bottom of the containing block of the shape relative to the shape anchor. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt;- A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's height.</li> </ul>                                                                                         |

| Attributes | Description             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|------------|-------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|            | margin-left             | <p>Specifies the position of the left of the containing block of the shape relative to the shape anchor. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt;- A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's width.</li> </ul>   |
|            | margin-right            | <p>Specifies the position of the right of the containing block of the shape relative to the shape anchor. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt; - A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's width.</li> </ul> |
|            | margin-top              | <p>Specifies the position of the top of the containing block of the shape relative to the shape anchor. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt;- A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's height.</li> </ul>   |
|            | mso-position-horizontal | <p>Specifies the horizontal positioning data for objects in WordprocessingML documents. Default is absolute. Allowed values are:</p> <ul style="list-style-type: none"> <li>• absolute</li> <li>• left</li> <li>• center</li> <li>• right</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                  |

| Attributes | Description                      |                                                                                                                                                                                                                                                                                                   |
|------------|----------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|            |                                  | <ul style="list-style-type: none"> <li>• inside</li> <li>• outside</li> </ul>                                                                                                                                                                                                                     |
|            | mso-position-horizontal-relative | <p>Specifies relative horizontal position data for objects in WordprocessingML documents. This modifies the mso-position-horizontal property. Default is text. Allowed values are:</p> <ul style="list-style-type: none"> <li>• margin</li> <li>• page</li> <li>• text</li> <li>• char</li> </ul> |
|            | mso-position-vertical            | <p>Specifies the vertical positioning data for objects in WordprocessingML documents. Default is absolute. Allowed values are:</p> <ul style="list-style-type: none"> <li>• absolute</li> <li>• top</li> <li>• center</li> <li>• bottom</li> <li>• inside</li> <li>• outside</li> </ul>           |
|            | mso-position-vertical-relative   | <p>Specifies relative vertical position data for objects in WordprocessingML documents. This modifies the mso-position-vertical property. Default is text. Allowed values are:</p> <ul style="list-style-type: none"> <li>• margin</li> <li>• page</li> <li>• text</li> <li>• line</li> </ul>     |
|            | mso-wrap-distance-bottom         | <p>Specifies the distance from the bottom of the shape to the text that wraps around it. Default is 0 pt. This property is different from the CSS margin property, which changes the origin of the shape to include the margin areas. This property does not change the origin.</p>               |
|            | mso-wrap-distance-left           | <p>Specifies the distance from the left side of the shape to the text that wraps around it. Default is 0 pt. This property is different from the CSS margin property, which changes the origin of the shape to include the margin areas. This property does not change the origin.</p>            |
|            | mso-wrap-                        | <p>Specifies the distance from the right side of the shape to the text</p>                                                                                                                                                                                                                        |

| Attributes | Description           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|------------|-----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|            | distance-right        | that wraps around it. Default is 0 pt. This property is different from the CSS margin property, which changes the origin of the shape to include the margin areas. This property does not change the origin.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|            | mso-wrap-distance-top | Specifies the distance from the top of the shape to the text that wraps around it. Default is 0 pt. This property is different from the CSS margin property, which changes the origin of the shape to include the margin areas. This property does not change the origin.                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|            | mso-wrap-edited       | Specifies whether the wrap coordinates were customized by the user. If the wrap coordinates are generated by an editor, this property is true; otherwise they were customized by a user. Default is false.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|            | mso-wrap-style        | <p>Specifies the wrapping mode for text in shapes in WordprocessingML documents. Default is square. Allowed values are:</p> <ul style="list-style-type: none"> <li>• square - Wraps text inside the shape in a square.</li> <li>• none - Text does not wrap.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|            | position              | <p>Specifies the kind of positioning used to place an element. Default is static. When the element is contained inside a group, this property shall be absolute. Allowed values are:</p> <ul style="list-style-type: none"> <li>• static - The element is positioned according to the normal flow of the page. The top and left properties are ignored. If the object is anchored inline, this value is used.</li> <li>• absolute - The element is positioned relative to the parent, using the top and left properties.</li> <li>• relative - The element is positioned according to the normal flow of the page, but the top and left properties are used. The overlap of overlapping elements is governed by the z-index property.</li> </ul> |
|            | rotation              | Specifies the angle that a shape is rotated, in degrees. Default is 0. Positive angles are clockwise.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|            | top                   | <p>Specifies the position of the top of the containing block of the shape relative to the element above it in the flow of the page. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. This property shall not be used for shapes anchored inline. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> </ul>                                                                                                                                                                                                                                                                               |

| Attributes | Description                                                                                                                                                                                                                                                                                                                                                            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |          |             |           |
|------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|----------|-------------|-----------|
|            |                                                                                                                                                                                                                                                                                                                                                                        | <ul style="list-style-type: none"><li>• &lt;units&gt;- A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li><li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's height.</li></ul>                                                                                                                                                                                                                                                                                      |          |             |           |
|            | visibility                                                                                                                                                                                                                                                                                                                                                             | <p>Specifies whether a shape is displayed. Only inherit and hidden are used; any other values are mapped to inherit. Default is inherit. Allowed values are:</p> <ul style="list-style-type: none"><li>• hidden - The shape is not visible, but is still part of the flow of the objects in the browser. Mouse events are not processed.</li><li>• inherit - The visibility state is inherited from the parent of the shape.</li></ul>                                                                                                                                                                              |          |             |           |
|            | width                                                                                                                                                                                                                                                                                                                                                                  | <p>Specifies the width of the containing block of the shape. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. Allowed values are:</p> <ul style="list-style-type: none"><li>• auto - Default position of an element in the flow of the page.</li><li>• &lt;units&gt;- A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li><li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's width.</li></ul> |          |             |           |
|            | z-index                                                                                                                                                                                                                                                                                                                                                                | <p>Specifies the display order of overlapping shapes. Default is 0. This property shall not be used for shapes anchored inline. Allowed values are:</p> <ul style="list-style-type: none"><li>• auto - Uses the order that the shapes appear in the page, bottom to top.</li><li>• &lt;order&gt;- A number that represents the stacking precedence. Shapes with higher numbers are placed on top of those with lower numbers. Negative numbers are allowed.</li></ul>                                                                                                                                               |          |             |           |
|            | <p>The following properties are only used by the textbox element (§19.1.2.22):</p> <table><tr><th>Property</th><th>Description</th></tr><tr><td>direction</td><td><p>Specifies the direction of the text in the textbox. Default is ltr. This property is superceded by the mso-direction-alt property if that is specified. Allowed values are:</p></td></tr></table> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Property | Description | direction |
| Property   | Description                                                                                                                                                                                                                                                                                                                                                            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |          |             |           |
| direction  | <p>Specifies the direction of the text in the textbox. Default is ltr. This property is superceded by the mso-direction-alt property if that is specified. Allowed values are:</p>                                                                                                                                                                                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |          |             |           |

| Attributes | Description           |                                                                                                                                                                                                                                                                                                                                                                                                                         |
|------------|-----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|            |                       | <ul style="list-style-type: none"> <li>• ltr - Text is displayed left-to-right.</li> <li>• rtl - Text is displayed right-to-left.</li> </ul>                                                                                                                                                                                                                                                                            |
|            | layout-flow           | <p>Determines the flow of the text layout in a textbox. Default is horizontal. Allowed values are:</p> <ul style="list-style-type: none"> <li>• horizontal - Text is displayed horizontally.</li> <li>• vertical - Text is displayed vertically.</li> <li>• vertical-ideographic - Ideographic text is displayed vertically.</li> <li>• horizontal-ideographic - Ideographic text is displayed horizontally.</li> </ul> |
|            | mso-direction-alt     | Specifies an alternate direction for text in textboxes. Overrides the direction property. The only allowed value is context.                                                                                                                                                                                                                                                                                            |
|            | mso-fit-shape-to-text | Specifies whether the shape stretches to fit the text in the textbox. Default is false.                                                                                                                                                                                                                                                                                                                                 |
|            | mso-fit-text-to-shape | Specifies whether the text stretches to fit the textbox. Default is false.                                                                                                                                                                                                                                                                                                                                              |
|            | mso-layout-flow-alt   | Specifies the alternate layout flow for text in textboxes. This property is used instead of layout-flow when the layout flow is from bottom to top for non-ideographic languages. Its only value is bottom-to-top.                                                                                                                                                                                                      |
|            | mso-next-textbox      | Specifies the ID of the next textbox in a series. Used to keep track of a set of linked textboxes. Default is no value.                                                                                                                                                                                                                                                                                                 |
|            | mso-rotate            | <p>Specifies a specific rotation value for text in a textbox. Default is 0. Allowed values are:</p> <ul style="list-style-type: none"> <li>• 0</li> <li>• 90</li> <li>• 180</li> <li>• -90</li> </ul>                                                                                                                                                                                                                   |
|            | mso-text-scale        | Specifies the scaling factor for fitting text to shapes. Default is 0. This property is only used if mso-fit-text-to-shape is true.                                                                                                                                                                                                                                                                                     |
|            | v-text-anchor         | Specifies the vertical anchoring of text in a textbox. Default is top. The alignment of a text anchor only becomes evident if mso-fit-text-to-shape is false. This property is different from the vertical-align CSS property, which is used for ideographic languages. Allowed values are:                                                                                                                             |

| Attributes | Description                                                                  |                                                                                                                                                                                                                                                                              |       |             |  |
|------------|------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------|-------------|--|
|            |                                                                              | <ul style="list-style-type: none"><li>• top</li><li>• middle</li><li>• bottom</li><li>• top-center</li><li>• middle-center</li><li>• bottom-center</li><li>• top-baseline</li><li>• bottom-baseline</li><li>• top-center-baseline</li><li>• bottom-center-baseline</li></ul> |       |             |  |
|            | The following properties are only used by the textpath element (§19.1.2.23): |                                                                                                                                                                                                                                                                              |       |             |  |
|            |                                                                              |                                                                                                                                                                                                                                                                              |       |             |  |
|            | Property                                                                     | Description                                                                                                                                                                                                                                                                  |       |             |  |
|            | font                                                                         | Specifies a compound value of font settings. Default is no value. The values are the same as those of the CSS font property. The order of definitions in the string is: font-style, font-variant, font-weight, font-size, line-height, font-family.                          |       |             |  |
|            | font-family                                                                  | Specifies the family of the font. Default is no value. The values are the same as those of the CSS font-family property.                                                                                                                                                     |       |             |  |
|            | font-size                                                                    | Specifies the size of the font. Default is no value. The font size is defined in points. The values are the same as those of the CSS font-size property.                                                                                                                     |       |             |  |
|            | font-style                                                                   | Specifies the amount of slant for a font. Default is normal. The values are the same as those of the CSS font-style property. Allowed values are: <ul style="list-style-type: none"><li>• normal</li><li>• italic</li><li>• oblique - Treated the same as italic.</li></ul>  |       |             |  |
|            | font-variant                                                                 | Specifies the variant style of a font. Default is normal. The values are the same as those of the CSS font-variant property. Allowed values are: <ul style="list-style-type: none"><li>• normal</li><li>• small-caps</li></ul>                                               |       |             |  |
|            | font-weight                                                                  | Specifies the thickness of the letters of the font. Default is normal. The values are the same as those of the CSS font-weight property. Allowed values are: <table><tr><th>Value</th><th>Description</th></tr><tr><td></td><td></td></tr></table>                           | Value | Description |  |
| Value      | Description                                                                  |                                                                                                                                                                                                                                                                              |       |             |  |
|            |                                                                              |                                                                                                                                                                                                                                                                              |       |             |  |

| Attributes | Description           |                                                                                                                                                                                                                                                                                                      |
|------------|-----------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|            |                       | <p>normal</p> <p>lighter</p> <p>100</p> <p>200</p> <p>300</p> <p>400</p> <p>Treated as non-bold.</p>                                                                                                                                                                                                 |
|            |                       | <p>bold</p> <p>bolder</p> <p>500</p> <p>600</p> <p>700</p> <p>800</p> <p>900</p> <p>Treated as bold.</p>                                                                                                                                                                                             |
|            | mso-text-shadow       | Specifies whether a shadow is applied to the text on a text path. Default is false.                                                                                                                                                                                                                  |
|            | text-decoration       | <p>Specifies the style of text decoration. Default is none. The values are the same as those of the CSS text-decoration property. Allowed values are:</p> <ul style="list-style-type: none"> <li>• none</li> <li>• underline</li> <li>• overline</li> <li>• line-through</li> <li>• blink</li> </ul> |
|            | v-rotate-letters      | Specifies whether the letters of the text are rotated counterclockwise by 90 degrees. Default is false.                                                                                                                                                                                              |
|            | v-same-letter-heights | Specifies whether all letters are the same height regardless of initial case. If true, the lowercase letters are stretched to the height of the uppercase letters. Default is false.                                                                                                                 |
|            | v-text-align          | <p>Specifies the alignment of text. Default is left. Allowed values are:</p> <ul style="list-style-type: none"> <li>• left</li> </ul>                                                                                                                                                                |

| Attributes                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Description         |                                                                                                                                                                                                                                                                                                                                                                                        |

|---------------------------------------------------------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>userdrawn (Exists In Master Slide)</p> <p>Namespace:<br/>urn:schemas-microsoft-com:office:office</p> | <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p> <p>Specifies whether the user has added the shape to a master slide. Default is <code>false</code>. Used by PresentationML.</p> <p>[Example:</p> <pre>&lt;v:shape ... o:userdrawn="true" ... &gt; &lt;/v:shape&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p>                                                                                                                                      |
| <p>userhidden (Hide Script Anchors)</p> <p>Namespace:<br/>urn:schemas-microsoft-com:office:office</p>   | <p>Specifies whether a script anchor is hidden. Default is <code>false</code>. If <code>true</code>, script anchors stay hidden even if the shape is otherwise visible. A script anchor is the visual representation of a script that when displayed in an application.</p> <p>[Example:</p> <pre>&lt;v:shape ... o:userhidden="true" ... &gt; &lt;/v:shape&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p>                                                                                          |
| <p>wrapcoords (Shape Bounding Polygon)</p>                                                              | <p>Specifies the bounding polygon that surrounds a shape. This is specified using a comma-delimited list of x and y coordinates: "x1,y1,x2,y2,x3,y3,..." This is used when text is tightly wrapped around a shape. Default is no value until the <code>mso-wrap-mode</code> style attribute is set to <code>tight</code> or <code>through</code>.</p> <p>[Example:</p> <pre>&lt;v:shape ...   wrapcoords="0,0 0,200, 200,200, 200,0" ... &gt; &lt;/v:shape&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p> |

[Note: The W3C XML Schema definition of this element's content model ([CT\\_Oval](#)) is located in §A.6.1. *end note*]

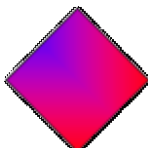

#### 19.1.2.14 path (Shape Path)

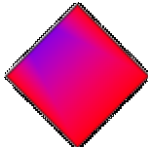

This element defines the path that makes up the shape. This is done through a string that contains a rich set of pen movement commands. This element also describes the limo-stretch point, inscribed textbox rectangle locations and connection site locations. The limo-stretch definition and the formulas element (§19.1.2.6) allow greater designer control of how the path scales. [Example: They allow, for example, definition of a true rounded corner rectangle where the corners remain circular even though the rectangle is scaled anisotropically. *end example*]

A given set of sub-paths (as delimited by end) is filled. Subsequent sets of sub-paths are filled independently and superimposed on existing ones. | t | rmoveto | 2* | Start a new sub-path at a coordinate relative to the current point, cp (cpx+x, cpy+y). | r | rlineto | 2* | Draw a line from the current point to the given relative coordinate (cpx+x, |

A given set of sub-paths (as delimited by end) is filled. Subsequent sets of sub-paths are filled independently and superimposed on existing ones. |            |             |   |        |   |                                                     |   |        |    |                                                                                                                                                                 |   |         |    |                                                                                                                                                                  |   |       |   |                                                                                                            |   |     |   |                                                                                                                                                                                      |   |         |    |                                                                                        |   |         |    |                                                                             |

|            | ae          | angleellipseto | 6* | Draws a segment of an ellipse as described using these parameters. A straight line is drawn from the current point to the start point of the segment. The parameters are: center (x,y), size(w,h), start angle, end angle.                                                                                                                                                                                                                                  |
|            | al          | angleellipse   | 6* | Same as angleellipseto except that there is an implied moveto the starting point of the segment.                                                                                                                                                                                                                                                                                                                                                            |
|            | at          | arcto          | 8* | A segment of the ellipse is drawn which starts at the angle defined by the start radius vector and ends at the angle defined by the end vector. A straight line is drawn from the current point to the start of the arc. The arc is always drawn in a counterclockwise direction. The parameters are: left, top, right, bottom, start(x,y), end(x,y). The first four values define the bounding box of an ellipse. The last four define two radial vectors. |
|            | ar          | arc            | 8* | Same as arcto except there is an implied moveto the start point of the arc.                                                                                                                                                                                                                                                                                                                                                                                 |
|            | wa          | clockwisearco  | 8* | Same as arcto but the arc is drawn in a clockwise direction.                                                                                                                                                                                                                                                                                                                                                                                                |

|            | qx                                                                                        | ellipticalquadrant<br>x | 2*   | A quarter ellipse is drawn from the current point to the given end point. The elliptical segment is initially tangential to a line parallel to the x-axis. (i.e. the segment starts out horizontal). The parameters are: end(x,y).                                                                                                                                                                                                                   |
|            | qy                                                                                        | ellipticalquadrant<br>y | 2*   | Same as ellipticalquadrantx except that the elliptical segment is initially tangential to a line parallel to the y-axis (i.e. the segment starts out vertical).                                                                                                                                                                                                                                                                                      |
|            | qb                                                                                        | quadraticbezier         | 2+2* | Defines one or more quadratic bézier curves by means of control points and an end point. Intermediate (on-curve) points are obtained by interpolation between successive control points as in the OpenType font specification. The sub-path need not be started in which case the sub-path is closed. In this case the last point of the sub-path defines the start point of the quadratic bézier. The parameters are: controlpoint(x,y)*, end(x,y). |
|            | The possible values for this attribute are defined by the W3C XML Schema string datatype. |                         |      |                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

[Note: The W3C XML Schema definition of this element's content model ([CT\\_Path](#)) is located in §A.6.1. *end note*]

#### 19.1.2.15 **polyline** (Multiple Path Line)

This element defines shapes made up of connected line segments.

[Example:

```
<v:polyline
  points="50pt,0pt 120pt,50pt 150pt,100pt 170pt,75pt 250pt,50pt">
</v:polyline>
```

*end example]*

Default is <code>false</code>.</p> <p>[Example:</p> <p style="padding-left: 40px;"><code>&lt;v:shape ... o:button="true" ... &gt;</code><br/> <code>&lt;/v:shape&gt;</code></p> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| bwmode (Black-and-White Mode)<br><br>Namespace:<br>urn:schemas-microsoft-com:office:office   | <p>Specifies how a shape renders for black-and-white output devices. When a shape is printed on a black-and-white printer or displayed in a black-and-white view in an application, several options are possible. Default is <code>auto</code>, which uses <code>o:bwnormal</code> for normal black-and-white rendering and <code>o:bwpure</code> for pure black-and-white rendering.</p> <p><code>bwnormal</code> and <code>bwpure</code> are subordinate to <code>bwmode</code>. If <code>bwmode</code> is <code>"auto"</code> then the value for <code>bwnormal</code> or <code>bwpure</code> is used depending on what the output format is. An application can define for itself what, if any, difference there is between normal B&amp;W and pure B&amp;W. [Example: Normal B&amp;W might allow greyscale and pure B&amp;W might not. <i>end example]</i></p> <p>[Example: This shape renders in grayscale in a black-and-white environment:</p> <p style="padding-left: 40px;"><code>&lt;v:shape ... o:bwmode="grayscale" ... &gt;</code><br/> <code>&lt;/v:shape&gt;</code></p> <p><i>end example]</i></p> |

| coordorigin<br>(Coordinate Space Origin) | <p>Specifies the coordinate of the top left corner of the shape's coordinate space. This determines the position of the (0,0) coordinate space origin within the shape's bounding box. Default is "0,0", which places the (0,0) origin at the top left corner of the bounding box.</p> <p>This affects shape properties that specify coordinate positions, such as the path attribute. Thus a path can be defined against a generic (0,0) origin and the coordorigin value translates the entire path within the shape's bounding space.</p> <p>[Example: The horizontal and vertical coordinate space ranges from -100 to +100 because the coordinate space (coordsize) is 200 by 200 and the top left coordinate is (-100,-100). The (0,0) origin lies at the center of the shape's bounding box, as evidenced by the position of the shape's path within the coordinate space:</p> <pre>&lt;v:shape ... coordsize="200,200"   coordorigin="-100,-100"   path="m 0,0 l 0,50, 50,50, 50,0 x e"&gt; &lt;/v:shape&gt;</pre>  <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p> |
| coordsize<br>(Coordinate Space Size)     | <p>Specifies the size of the shape's coordinate space in coordinate units. Default is "1000,1000".</p> <p>The physical size of a coordinate unit length is determined by both the size of the coordinate space (coordsize) and the size of the shape (style width and height). The coordsize attribute defines the number of horizontal and vertical subdivisions into which the shape's bounding box is divided. The combination of coordsize and style width/height effective scales the shape anisotropically.</p> <p>[Example: The path is 50 units wide and tall, which is 25% of the size of the coordinate space:</p> <pre>&lt;v:shape ... coordsize="200,200"   coordorigin="-100,-100"</pre>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

| Attributes                                                                                                                    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| <p>doubleclicknotify<br/>(Double-click Notification Toggle)</p> <p>Namespace:<br/>urn:schemas-microsoft-com:office:office</p> | <p>Specifies that an event message is sent when a shape is double-clicked. Default is false.</p> <p>[Example:</p> <pre>&lt;v:shape ... o:doubleclicknotify="true" ... &gt; &lt;/v:shape&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p>                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <p>fillcolor (Fill Color)</p>                                                                                                 | <p>Specifies the color to use for the fill. Default is white. If the fill element (§19.1.2.5) is present, its color attribute takes precedence. Colors are typically specified as either a named color, such as red, or six hexadecimal digits representing the red, green and blue values of the color, such as #00FF30. Full details are specified in the simple type description.</p> <p>[Example: This shape is red if its fill is visible:</p> <pre>&lt;v:shape ... fillcolor="red" ... &gt; &lt;/v:shape&gt;</pre> <p>This is equivalent to:</p> <pre>&lt;v:shape ... fillcolor="#ff0000" ... &gt; &lt;/v:shape&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_ColorType simple type (§20.1.2.3).</p> |
| <p>filled (Shape Fill Toggle)</p>                                                                                             | <p>Specifies whether the closed path is filled. Default is true. This attribute is overridden by the fill on attribute.</p> <p>[Example:</p> <pre>&lt;v:shape ... filled="f" fillcolor="red" ...&gt; &lt;/v:shape&gt;</pre>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

|                                                                                                              | <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                  |
| <p>points (Points for Compound Line)</p>                                                                     | <p>Specifies a set of straight line segments that are composed of a series of pairs of points. Default is "0,0 10,10".</p> <p>Points are specified in the coordinate system of the parent element. If the parent is not a VML element, the default unit is a pixel. Allowed units are in, cm, mm, pt, pc and px. While commas are not required, they should be used for easier readability.</p> <p>See above for an example.</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p> |
| <p>preferrelative (Relative Resize Toggle)</p> <p>Namespace:<br/>urn:schemas-microsoft-com:office:office</p> | <p>Specifies whether the original size of an object is saved after reformatting. Default is false. If true, the original size of the object is stored and all resizing is based on a percentage of that original size. Otherwise, each resizing resets the scale to 100%.</p> <p>[Example:</p> <pre>&lt;v:shape ... o:preferrelative="true" ... &gt; &lt;/v:shape&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p>                            |
| <p>print (Print Toggle)</p>                                                                                  | <p>Specifies whether the shape is printed. Default is true.</p> <p>[Example:</p> <pre>&lt;v:shape ... print="false" ... &gt; &lt;/v:shape&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p>                                                                                                                                                                                                                                                    |
| <p>regroupid (Regroup ID)</p> <p>Namespace:<br/>urn:schemas-microsoft-com:office:office</p>                  | <p>Specifies a previous group for a shape. An ID number is used to identify groups of shapes that are no longer grouped. This allows shapes to be regrouped programmatically.</p> <p>[Example: The shape was part of a group identified by the ID 040754:</p> <pre>&lt;v:shape ... o:regroupid="040754" ... &gt; &lt;/v:shape&gt;</pre>                                                                                                                                                                                           |

| Attributes                                                                                  | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

|                                       | <pre>stroked="false" strokecolor="blue"...&gt; &lt;/v:shape&gt;</pre>  <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |          |             |
| strokeweight<br>(Shape Stroke Weight) | <p>Specifies the width of the brush to use to stroke the path. Default is 1 point. If a number is given without units, the emu is used. The weight attribute of the stroke element (§19.1.2.21) overrides this attribute.</p> <p>[Example:</p> <pre>&lt;v:shape ... strokeweight="3pt" ... &gt; &lt;/v:shape&gt;</pre>  <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                                                                                                                                                                                                                                                                                                      |          |             |
| style (Shape Styling Properties)      | <p>Specifies the CSS2 styling properties of the shape. The CSS2 (Cascading Style Sheets, Level 2) specification, a Recommendation of the World Wide Web Consortium, is available here: <a href="http://www.w3.org/TR/REC-CSS2">http://www.w3.org/TR/REC-CSS2</a>.</p> <p>This attribute uses a semi-colon delimited list of “name:value” pairs, the syntax defined by section 4.1.8 of the CSS2 specification for grouped declarations (without the surrounding braces). The following tables define the allowed properties and the VML treatment of each.</p> <p>[Example:</p> <pre>&lt;v:shape ... style='position:absolute;width:100pt;height:50pt' ... &gt; &lt;/v:shape&gt;</pre> <p><i>end example]</i></p> <table border="1" data-bbox="415 1787 1477 1837"> <thead> <tr> <th data-bbox="415 1787 664 1837">Property</th><th data-bbox="664 1787 1477 1837">Description</th></tr> </thead> </table> | Property | Description |
| Property                              | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |          |             |

| Attributes | Description   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|------------|---------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|            | flip          | <p>Specifies that the orientation of a shape is flipped. Default is no value. Allowed values are:</p> <ul style="list-style-type: none"> <li>• x - Flip along the y-axis, reversing the x-coordinates.</li> <li>• y - Flip along the x-axis, reversing the y-coordinates.</li> <li>• xy - Flip along both the y- and x-axis.</li> <li>• yx - Flip along both the x- and y-axis.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                     |
|            | height        | <p>Specifies the height of the containing block of the shape. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt;- A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's height.</li> </ul>                                                                                                                                      |
|            | left          | <p>Specifies the position of the left of the containing block of the shape relative to the element left of it in the flow of the page. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. This property shall not be used for shapes anchored inline. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt; - A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's width.</li> </ul> |
|            | margin-bottom | <p>Specifies the position of the bottom of the containing block of the shape relative to the shape anchor. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt;- A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's height.</li> </ul>                                                                                         |

| Attributes | Description             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|------------|-------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|            | margin-left             | <p>Specifies the position of the left of the containing block of the shape relative to the shape anchor. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt;- A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's width.</li> </ul>   |
|            | margin-right            | <p>Specifies the position of the right of the containing block of the shape relative to the shape anchor. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt; - A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's width.</li> </ul> |
|            | margin-top              | <p>Specifies the position of the top of the containing block of the shape relative to the shape anchor. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt;- A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's height.</li> </ul>   |
|            | mso-position-horizontal | <p>Specifies the horizontal positioning data for objects in WordprocessingML documents. Default is absolute. Allowed values are:</p> <ul style="list-style-type: none"> <li>• absolute</li> <li>• left</li> <li>• center</li> <li>• right</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                  |

| Attributes | Description                      |                                                                                                                                                                                                                                                                                                   |
|------------|----------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|            |                                  | <ul style="list-style-type: none"> <li>• inside</li> <li>• outside</li> </ul>                                                                                                                                                                                                                     |
|            | mso-position-horizontal-relative | <p>Specifies relative horizontal position data for objects in WordprocessingML documents. This modifies the mso-position-horizontal property. Default is text. Allowed values are:</p> <ul style="list-style-type: none"> <li>• margin</li> <li>• page</li> <li>• text</li> <li>• char</li> </ul> |
|            | mso-position-vertical            | <p>Specifies the vertical positioning data for objects in WordprocessingML documents. Default is absolute. Allowed values are:</p> <ul style="list-style-type: none"> <li>• absolute</li> <li>• top</li> <li>• center</li> <li>• bottom</li> <li>• inside</li> <li>• outside</li> </ul>           |
|            | mso-position-vertical-relative   | <p>Specifies relative vertical position data for objects in WordprocessingML documents. This modifies the mso-position-vertical property. Default is text. Allowed values are:</p> <ul style="list-style-type: none"> <li>• margin</li> <li>• page</li> <li>• text</li> <li>• line</li> </ul>     |
|            | mso-wrap-distance-bottom         | <p>Specifies the distance from the bottom of the shape to the text that wraps around it. Default is 0 pt. This property is different from the CSS margin property, which changes the origin of the shape to include the margin areas. This property does not change the origin.</p>               |
|            | mso-wrap-distance-left           | <p>Specifies the distance from the left side of the shape to the text that wraps around it. Default is 0 pt. This property is different from the CSS margin property, which changes the origin of the shape to include the margin areas. This property does not change the origin.</p>            |
|            | mso-wrap-                        | <p>Specifies the distance from the right side of the shape to the text</p>                                                                                                                                                                                                                        |

| Attributes | Description           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|------------|-----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|            | distance-right        | that wraps around it. Default is 0 pt. This property is different from the CSS margin property, which changes the origin of the shape to include the margin areas. This property does not change the origin.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|            | mso-wrap-distance-top | Specifies the distance from the top of the shape to the text that wraps around it. Default is 0 pt. This property is different from the CSS margin property, which changes the origin of the shape to include the margin areas. This property does not change the origin.                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|            | mso-wrap-edited       | Specifies whether the wrap coordinates were customized by the user. If the wrap coordinates are generated by an editor, this property is true; otherwise they were customized by a user. Default is false.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|            | mso-wrap-style        | <p>Specifies the wrapping mode for text in shapes in WordprocessingML documents. Default is square. Allowed values are:</p> <ul style="list-style-type: none"> <li>• square - Wraps text inside the shape in a square.</li> <li>• none - Text does not wrap.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|            | position              | <p>Specifies the kind of positioning used to place an element. Default is static. When the element is contained inside a group, this property shall be absolute. Allowed values are:</p> <ul style="list-style-type: none"> <li>• static - The element is positioned according to the normal flow of the page. The top and left properties are ignored. If the object is anchored inline, this value is used.</li> <li>• absolute - The element is positioned relative to the parent, using the top and left properties.</li> <li>• relative - The element is positioned according to the normal flow of the page, but the top and left properties are used. The overlap of overlapping elements is governed by the z-index property.</li> </ul> |
|            | rotation              | Specifies the angle that a shape is rotated, in degrees. Default is 0. Positive angles are clockwise.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|            | top                   | <p>Specifies the position of the top of the containing block of the shape relative to the element above it in the flow of the page. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. This property shall not be used for shapes anchored inline. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> </ul>                                                                                                                                                                                                                                                                               |

| Attributes | Description                                                                                                                                                                                                                                                                                                                                                            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |          |             |           |

|            | visibility                                                                                                                                                                                                                                                                                                                                                             | <p>Specifies whether a shape is displayed. Only inherit and hidden are used; any other values are mapped to inherit. Default is inherit. Allowed values are:</p> <ul style="list-style-type: none"><li>• hidden - The shape is not visible, but is still part of the flow of the objects in the browser. Mouse events are not processed.</li><li>• inherit - The visibility state is inherited from the parent of the shape.</li></ul>                                                                                                                                                                                            |          |             |           |
|            | width                                                                                                                                                                                                                                                                                                                                                                  | <p>Specifies the width of the containing block of the shape. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. Allowed values are:</p> <ul style="list-style-type: none"><li>• auto - Default position of an element in the flow of the page.</li><li>• <b>&lt;units&gt;</b>- A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li><li>• <b>&lt;percentage&gt;</b>- Value expressed as a percentage of the parent object's width.</li></ul> |          |             |           |
|            | z-index                                                                                                                                                                                                                                                                                                                                                                | <p>Specifies the display order of overlapping shapes. Default is 0. This property shall not be used for shapes anchored inline. Allowed values are:</p> <ul style="list-style-type: none"><li>• auto - Uses the order that the shapes appear in the page, bottom to top.</li><li>• <b>&lt;order&gt;</b>- A number that represents the stacking precedence. Shapes with higher numbers are placed on top of those with lower numbers. Negative numbers are allowed.</li></ul>                                                                                                                                                      |          |             |           |
|            | <p>The following properties are only used by the textbox element (§19.1.2.22):</p> <table><tr><th>Property</th><th>Description</th></tr><tr><td>direction</td><td><p>Specifies the direction of the text in the textbox. Default is ltr. This property is superceded by the mso-direction-alt property if that is specified. Allowed values are:</p></td></tr></table> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | Property | Description | direction |
| Property   | Description                                                                                                                                                                                                                                                                                                                                                            |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |          |             |           |
| direction  | <p>Specifies the direction of the text in the textbox. Default is ltr. This property is superceded by the mso-direction-alt property if that is specified. Allowed values are:</p>                                                                                                                                                                                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |          |             |           |

| Attributes | Description           |                                                                                                                                                                                                                                                                                                                                                                                                                         |
|------------|-----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|            |                       | <ul style="list-style-type: none"> <li>• ltr - Text is displayed left-to-right.</li> <li>• rtl - Text is displayed right-to-left.</li> </ul>                                                                                                                                                                                                                                                                            |
|            | layout-flow           | <p>Determines the flow of the text layout in a textbox. Default is horizontal. Allowed values are:</p> <ul style="list-style-type: none"> <li>• horizontal - Text is displayed horizontally.</li> <li>• vertical - Text is displayed vertically.</li> <li>• vertical-ideographic - Ideographic text is displayed vertically.</li> <li>• horizontal-ideographic - Ideographic text is displayed horizontally.</li> </ul> |
|            | mso-direction-alt     | Specifies an alternate direction for text in textboxes. Overrides the direction property. The only allowed value is context.                                                                                                                                                                                                                                                                                            |
|            | mso-fit-shape-to-text | Specifies whether the shape stretches to fit the text in the textbox. Default is false.                                                                                                                                                                                                                                                                                                                                 |
|            | mso-fit-text-to-shape | Specifies whether the text stretches to fit the textbox. Default is false.                                                                                                                                                                                                                                                                                                                                              |
|            | mso-layout-flow-alt   | Specifies the alternate layout flow for text in textboxes. This property is used instead of layout-flow when the layout flow is from bottom to top for non-ideographic languages. Its only value is bottom-to-top.                                                                                                                                                                                                      |
|            | mso-next-textbox      | Specifies the ID of the next textbox in a series. Used to keep track of a set of linked textboxes. Default is no value.                                                                                                                                                                                                                                                                                                 |
|            | mso-rotate            | <p>Specifies a specific rotation value for text in a textbox. Default is 0. Allowed values are:</p> <ul style="list-style-type: none"> <li>• 0</li> <li>• 90</li> <li>• 180</li> <li>• -90</li> </ul>                                                                                                                                                                                                                   |
|            | mso-text-scale        | Specifies the scaling factor for fitting text to shapes. Default is 0. This property is only used if mso-fit-text-to-shape is true.                                                                                                                                                                                                                                                                                     |
|            | v-text-anchor         | Specifies the vertical anchoring of text in a textbox. Default is top. The alignment of a text anchor only becomes evident if mso-fit-text-to-shape is false. This property is different from the vertical-align CSS property, which is used for ideographic languages. Allowed values are:                                                                                                                             |

| Attributes | Description                                                                  |                                                                                                                                                                                                                                                                              |       |
|------------|------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------|
|            |                                                                              | <ul style="list-style-type: none"><li>• top</li><li>• middle</li><li>• bottom</li><li>• top-center</li><li>• middle-center</li><li>• bottom-center</li><li>• top-baseline</li><li>• bottom-baseline</li><li>• top-center-baseline</li><li>• bottom-center-baseline</li></ul> |       |
|            | The following properties are only used by the textpath element (§19.1.2.23): |                                                                                                                                                                                                                                                                              |       |
|            |                                                                              |                                                                                                                                                                                                                                                                              |       |
|            | Property                                                                     | Description                                                                                                                                                                                                                                                                  |       |
|            | font                                                                         | Specifies a compound value of font settings. Default is no value. The values are the same as those of the CSS font property. The order of definitions in the string is: font-style, font-variant, font-weight, font-size, line-height, font-family.                          |       |
|            | font-family                                                                  | Specifies the family of the font. Default is no value. The values are the same as those of the CSS font-family property.                                                                                                                                                     |       |
|            | font-size                                                                    | Specifies the size of the font. Default is no value. The font size is defined in points. The values are the same as those of the CSS font-size property.                                                                                                                     |       |
|            | font-style                                                                   | Specifies the amount of slant for a font. Default is normal. The values are the same as those of the CSS font-style property. Allowed values are: <ul style="list-style-type: none"><li>• normal</li><li>• italic</li><li>• oblique - Treated the same as italic.</li></ul>  |       |
|            | font-variant                                                                 | Specifies the variant style of a font. Default is normal. The values are the same as those of the CSS font-variant property. Allowed values are: <ul style="list-style-type: none"><li>• normal</li><li>• small-caps</li></ul>                                               |       |
|            | font-weight                                                                  | Specifies the thickness of the letters of the font. Default is normal. The values are the same as those of the CSS font-weight property. Allowed values are: <table><tr><th>Value</th><th>Description</th></tr></table>                                                      | Value |
| Value      | Description                                                                  |                                                                                                                                                                                                                                                                              |       |

|            |                       | <p>bold</p> <p>bolder</p> <p>500</p> <p>600</p> <p>700</p> <p>800</p> <p>900</p> <p>Treated as bold.</p>                                                                                                                                                                                             |
|            | mso-text-shadow       | Specifies whether a shadow is applied to the text on a text path. Default is false.                                                                                                                                                                                                                  |
|            | text-decoration       | <p>Specifies the style of text decoration. Default is none. The values are the same as those of the CSS text-decoration property. Allowed values are:</p> <ul style="list-style-type: none"> <li>• none</li> <li>• underline</li> <li>• overline</li> <li>• line-through</li> <li>• blink</li> </ul> |
|            | v-rotate-letters      | Specifies whether the letters of the text are rotated counterclockwise by 90 degrees. Default is false.                                                                                                                                                                                              |
|            | v-same-letter-heights | Specifies whether all letters are the same height regardless of initial case. If true, the lowercase letters are stretched to the height of the uppercase letters. Default is false.                                                                                                                 |
|            | v-text-align          | <p>Specifies the alignment of text. Default is left. Allowed values are:</p> <ul style="list-style-type: none"> <li>• left</li> </ul>                                                                                                                                                                |

| Attributes                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Description         |                                                                                                                                                                                                                                                                                                                                                                                        |

| <p>userdrawn (Exists In Master Slide)</p> <p>Namespace:<br/>urn:schemas-microsoft-com:office:office</p> | <p>Specifies whether the user has added the shape to a master slide. Default is false. Used by PresentationML.</p> <p>[Example:</p> <pre>&lt;v:shape ... o:userdrawn="true" ... &gt; &lt;/v:shape&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p>                                                                                                                                                                                                           |
| <p>userhidden (Hide Script Anchors)</p> <p>Namespace:<br/>urn:schemas-microsoft-com:office:office</p>   | <p>Specifies whether a script anchor is hidden. Default is false. If true, script anchors stay hidden even if the shape is otherwise visible. A script anchor is the visual representation of a script that when displayed in an application.</p> <p>[Example:</p> <pre>&lt;v:shape ... o:userhidden="true" ... &gt; &lt;/v:shape&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p>                                                                           |
| <p>wrapcoords (Shape Bounding Polygon)</p>                                                              | <p>Specifies the bounding polygon that surrounds a shape. This is specified using a comma-delimited list of x and y coordinates: "x1,y1,x2,y2,x3,y3,..." This is used when text is tightly wrapped around a shape. Default is no value until the mso-wrap-mode style attribute is set to tight or through.</p> <p>[Example:</p> <pre>&lt;v:shape ... wrapcoords="0,0 0,200, 200,200, 200,0" ... &gt; &lt;/v:shape&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p> |

[Note: The W3C XML Schema definition of this element's content model ([CT\\_PolyLine](#)) is located in §A.6.1. *end note*]

### 19.1.2.16 **rect** (Rectangle)

This element is used to draw a simple rectangle. The CSS2 style content width and height define the width and height of the rectangle.

[Example:

```
<v:rect fillcolor="red"
  style="position:relative;top:0;left:0;width:100;height:100">
</v:rect>
```

*end example]*

| <p>connectortype<br/>(Shape Connector Type)</p> <p>Namespace:<br/>urn:schemas-microsoft-com:office:office</p> | <p>Specifies the kind of connector used for joining shapes. Default is straight.</p> <p>[Example:</p> <pre>&lt;v:shape ... o:connectortype="elbow" ... &gt; &lt;/v:shape&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_ConnectorType simple type (§19.2.3.7).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
| <p>coordorigin<br/>(Coordinate Space Origin)</p>                                                              | <p>Specifies the coordinate of the top left corner of the shape's coordinate space. This determines the position of the (0,0) coordinate space origin within the shape's bounding box. Default is "0,0", which places the (0,0) origin at the top left corner of the bounding box.</p> <p>This affects shape properties that specify coordinate positions, such as the path attribute. Thus a path can be defined against a generic (0,0) origin and the coordorigin value translates the entire path within the shape's bounding space.</p> <p>[Example: The horizontal and vertical coordinate space ranges from -100 to +100 because the coordinate space (coordsize) is 200 by 200 and the top left coordinate is (-100,-100). The (0,0) origin lies at the center of the shape's bounding box, as evidenced by the position of the shape's path within the coordinate space:</p> <pre>&lt;v:shape ... coordsize="200,200" coordorigin="-100,-100" path="m 0,0 l 0,50, 50,50, 50,0 x e"&gt; &lt;/v:shape&gt;</pre>  <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p> |
| <p>coordsize<br/>(Coordinate Space)</p>                                                                       | <p>Specifies the size of the shape's coordinate space in coordinate units. Default is "1000,1000".</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| Attributes                                                                                                           | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|----------------------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Size)                                                                                                                | <p>The physical size of a coordinate unit length is determined by both the size of the coordinate space (coordsize) and the size of the shape (style width and height). The coordsize attribute defines the number of horizontal and vertical subdivisions into which the shape's bounding box is divided. The combination of coordsize and style width/height effective scales the shape anisotropically.</p> <p>[Example: The path is 50 units wide and tall, which is 25% of the size of the coordinate space:</p> <pre>&lt;v:shape ... coordsize="200,200"   coordorigin="-100,-100"   path="m 0,0 l 0,50, 50,50, 50,0 x e"&gt; &lt;/v:shape&gt;</pre>  <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p> |
| dgmlayout<br>(Diagram Node Layout Identifier)<br><br>Namespace:<br>urn:schemas-microsoft-com:office:office           | <p>Specifies the kind of automatic layout to apply to the diagram node. |            |                       | the origin.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|            | mso-wrap-distance-top | Specifies the distance from the top of the shape to the text that wraps around it. Default is 0 pt. This property is different from the CSS margin property, which changes the origin of the shape to include the margin areas. This property does not change the origin.                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|            | mso-wrap-edited       | Specifies whether the wrap coordinates were customized by the user. If the wrap coordinates are generated by an editor, this property is true; otherwise they were customized by a user. Default is false.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|            | mso-wrap-style        | <p>Specifies the wrapping mode for text in shapes in WordprocessingML documents. Default is square. Allowed values are:</p> <ul style="list-style-type: none"> <li>• square - Wraps text inside the shape in a square.</li> <li>• none - Text does not wrap.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|            | position              | <p>Specifies the kind of positioning used to place an element. Default is static. When the element is contained inside a group, this property shall be absolute. Allowed values are:</p> <ul style="list-style-type: none"> <li>• static - The element is positioned according to the normal flow of the page. The top and left properties are ignored. If the object is anchored inline, this value is used.</li> <li>• absolute - The element is positioned relative to the parent, using the top and left properties.</li> <li>• relative - The element is positioned according to the normal flow of the page, but the top and left properties are used. The overlap of overlapping elements is governed by the z-index property.</li> </ul> |
|            | rotation              | Specifies the angle that a shape is rotated, in degrees. Default is 0. Positive angles are clockwise.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|            | top                   | <p>Specifies the position of the top of the containing block of the shape relative to the element above it in the flow of the page. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. This property shall not be used for shapes anchored inline. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt;- A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> </ul>                                                                                    |

| Attributes | Description                                                                                                                                                                                                                                                                                                                                                                                                                  |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |             |           |                                                                                                                                                                                                                                                                                                                              |

The only allowed value is context.</p>                                                                                                                                                                                                                                                                       |
|            | <p><b>mso-fit-shape-to-text</b></p> <p>Specifies whether the shape stretches to fit the text in the textbox. Default is false.</p>                                                                                                                                                                                                                                                                                                        |
|            | <p><b>mso-fit-text-to-shape</b></p> <p>Specifies whether the text stretches to fit the textbox. Default is false.</p>                                                                                                                                                                                                                                                                                                                     |
|            | <p><b>mso-layout-flow-alt</b></p> <p>Specifies the alternate layout flow for text in textboxes. This property is used instead of layout-flow when the layout flow is from bottom to top for non-ideographic languages. Its only value is bottom-to-top.</p>                                                                                                                                                                               |
|            | <p><b>mso-next-textbox</b></p> <p>Specifies the ID of the next textbox in a series. Used to keep track of a set of linked textboxes. Default is no value.</p>                                                                                                                                                                                                                                                                             |
|            | <p><b>mso-rotate</b></p> <p>Specifies a specific rotation value for text in a textbox. Default is 0. Allowed values are:</p> <ul style="list-style-type: none"> <li>0</li> <li>90</li> <li>180</li> <li>-90</li> </ul>                                                                                                                                                                                                                    |
|            | <p><b>mso-text-scale</b></p> <p>Specifies the scaling factor for fitting text to shapes. Default is 0. This property is only used if mso-fit-text-to-shape is true.</p>                                                                                                                                                                                                                                                                   |
|            | <p><b>v-text-anchor</b></p> <p>Specifies the vertical anchoring of text in a textbox. Default is top. The alignment of a text anchor only becomes evident if mso-fit-text-to-shape is false. This property is different from the vertical-align CSS property, which is used for ideographic languages. Allowed values are:</p> <ul style="list-style-type: none"> <li>top</li> <li>middle</li> </ul>                                      |

| Attributes | Description                                                                  |                                                                                                                                                                                                                                                                              |       |             |        |                      |
|------------|------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------|-------------|--------|----------------------|
|            |                                                                              | <ul style="list-style-type: none"><li>• bottom</li><li>• top-center</li><li>• middle-center</li><li>• bottom-center</li><li>• top-baseline</li><li>• bottom-baseline</li><li>• top-center-baseline</li><li>• bottom-center-baseline</li></ul>                                |       |             |        |                      |
|            | The following properties are only used by the textpath element (§19.1.2.23): |                                                                                                                                                                                                                                                                              |       |             |        |                      |
|            | Property                                                                     | Description                                                                                                                                                                                                                                                                  |       |             |        |                      |
|            | font                                                                         | Specifies a compound value of font settings. Default is no value. The values are the same as those of the CSS font property. The order of definitions in the string is: font-style, font-variant, font-weight, font-size, line-height, font-family.                          |       |             |        |                      |
|            | font-family                                                                  | Specifies the family of the font. Default is no value. The values are the same as those of the CSS font-family property.                                                                                                                                                     |       |             |        |                      |
|            | font-size                                                                    | Specifies the size of the font. Default is no value. The font size is defined in points. The values are the same as those of the CSS font-size property.                                                                                                                     |       |             |        |                      |
|            | font-style                                                                   | Specifies the amount of slant for a font. Default is normal. The values are the same as those of the CSS font-style property. Allowed values are: <ul style="list-style-type: none"><li>• normal</li><li>• italic</li><li>• oblique - Treated the same as italic.</li></ul>  |       |             |        |                      |
|            | font-variant                                                                 | Specifies the variant style of a font. Default is normal. The values are the same as those of the CSS font-variant property. Allowed values are: <ul style="list-style-type: none"><li>• normal</li><li>• small-caps</li></ul>                                               |       |             |        |                      |
|            | font-weight                                                                  | Specifies the thickness of the letters of the font. Default is normal. The values are the same as those of the CSS font-weight property. Allowed values are: <table><tr><th>Value</th><th>Description</th></tr><tr><td>normal</td><td>Treated as non-bold.</td></tr></table> | Value | Description | normal | Treated as non-bold. |
|            | Value                                                                        | Description                                                                                                                                                                                                                                                                  |       |             |        |                      |
| normal     | Treated as non-bold.                                                         |                                                                                                                                                                                                                                                                              |       |             |        |                      |
|            |                                                                              |                                                                                                                                                                                                                                                                              |       |             |        |                      |

| Attributes | Description           |                                                                                                                                                                                                                                                                                               |
|------------|-----------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|

|            |                       | bold<br><br>bolder<br><br>500<br><br>600<br><br>700<br><br>800<br><br>900<br><br>Treated as bold.                                                                                                                                                                                             |
|            | mso-text-shadow       | Specifies whether a shadow is applied to the text on a text path. Default is false.                                                                                                                                                                                                           |
|            | text-decoration       | Specifies the style of text decoration. Default is none. The values are the same as those of the CSS text-decoration property. Allowed values are: <ul style="list-style-type: none"> <li>• none</li> <li>• underline</li> <li>• overline</li> <li>• line-through</li> <li>• blink</li> </ul> |
|            | v-rotate-letters      | Specifies whether the letters of the text are rotated counterclockwise by 90 degrees. Default is false.                                                                                                                                                                                       |
|            | v-same-letter-heights | Specifies whether all letters are the same height regardless of initial case. If true, the lowercase letters are stretched to the height of the uppercase letters. Default is false.                                                                                                          |
|            | v-text-align          | Specifies the alignment of text. Default is left. Allowed values are: <ul style="list-style-type: none"> <li>• left</li> <li>• right</li> <li>• center</li> </ul>                                                                                                                             |

| Attributes                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     | Description         |                                                                                                                                                                                                                                                                                                                                                                                        |

| <p>userdrawn (Exists In Master Slide)</p> <p>Namespace:<br/>urn:schemas-microsoft-com:office:office</p> | <p>Specifies whether the user has added the shape to a master slide. Default is <code>false</code>. Used by PresentationML.</p> <p>[Example:</p> <pre>&lt;v:shape ... o:userdrawn="true" ... &gt; &lt;/v:shape&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p>                                                                                                                                                                                                                                       |
| <p>userhidden (Hide Script Anchors)</p> <p>Namespace:<br/>urn:schemas-microsoft-com:office:office</p>   | <p>Specifies whether a script anchor is hidden. Default is <code>false</code>. If <code>true</code>, script anchors stay hidden even if the shape is otherwise visible. A script anchor is the visual representation of a script that when displayed in an application.</p> <p>[Example:</p> <pre>&lt;v:shape ... o:userhidden="true" ... &gt; &lt;/v:shape&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p>                                                                                          |
| <p>wrapcoords (Shape Bounding Polygon)</p>                                                              | <p>Specifies the bounding polygon that surrounds a shape. This is specified using a comma-delimited list of x and y coordinates: "x1,y1,x2,y2,x3,y3,..." This is used when text is tightly wrapped around a shape. Default is no value until the <code>mso-wrap-mode</code> style attribute is set to <code>tight</code> or <code>through</code>.</p> <p>[Example:</p> <pre>&lt;v:shape ...   wrapcoords="0,0 0,200, 200,200, 200,0" ... &gt; &lt;/v:shape&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p> |

[Note: The W3C XML Schema definition of this element's content model ([CT\\_Rect](#)) is located in §A.6.1. *end note*]

### 19.1.2.17 **roundrect** (Rounded Rectangle)

This element is used to draw a rectangle with rounded corners. The CSS2 style content width and height define the width and height of the rectangle.

[Example:

```
<v:roundrect fillcolor="red" arcsize="35%"
  style="position:relative;top:0;left:0;width:200;height:100">
</v:roundrect>
```

end example]

| <p>cliptowrap (Clip to Wrapping Polygon)</p> <p>Namespace:<br/>urn:schemas-microsoft-com:office:office</p> | <p>Specifies that the clipping region for the shape aligns with the wrapping polygon that tightly surrounds the entire shape (essentially, that the shape shall not be drawn beyond its wrapping polygon's extents – if it does, the shape shall be clipped). Default is false.</p> <p>[Example:</p> <pre>&lt;v:shape ... o:cliptowrap="true"&gt; &lt;/v:shape&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| <p>connectortype (Shape Connector Type)</p> <p>Namespace:<br/>urn:schemas-microsoft-com:office:office</p>  | <p>Specifies the kind of connector used for joining shapes. Default is straight.</p> <p>[Example:</p> <pre>&lt;v:shape ... o:connectortype="elbow" ... &gt; &lt;/v:shape&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_ConnectorType simple type (§19.2.3.7).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <p>coordorigin (Coordinate Space Origin)</p>                                                               | <p>Specifies the coordinate of the top left corner of the shape's coordinate space. This determines the position of the (0,0) coordinate space origin within the shape's bounding box. Default is "0,0", which places the (0,0) origin at the top left corner of the bounding box.</p> <p>This affects shape properties that specify coordinate positions, such as the path attribute. Thus a path can be defined against a generic (0,0) origin and the coordorigin value translates the entire path within the shape's bounding space.</p> <p>[Example: The horizontal and vertical coordinate space ranges from -100 to +100 because the coordinate space (coordsize) is 200 by 200 and the top left coordinate is (-100,-100). The (0,0) origin lies at the center of the shape's bounding box, as evidenced by the position of the shape's path within the coordinate space:</p> <pre>&lt;v:shape ... coordsize="200,200" coordorigin="-100,-100"</pre> |

| Attributes                                                                                                        | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

|                                                                                             | <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <p>regroupid (Regroup ID)</p> <p>Namespace:<br/>urn:schemas-microsoft-com:office:office</p> | <p>Specifies a previous group for a shape. An ID number is used to identify groups of shapes that are no longer grouped. This allows shapes to be regrouped programmatically.</p> <p>[Example: The shape was part of a group identified by the ID 040754:</p> <pre>&lt;v:shape ... o:regroupid="040754" ... &gt; &lt;/v:shape&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema integer datatype.</p>                                                                                                                             |
| <p>spid (Optional String)</p> <p>Namespace:<br/>urn:schemas-microsoft-com:office:office</p> | <p>Specifies an optional string that an application can use to identify the particular shape. Default is no value.</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                                                                                                                                                                                                                                                                                                          |
| <p>spt (Optional Number)</p> <p>Namespace:<br/>urn:schemas-microsoft-com:office:office</p>  | <p>Specifies an optional number that an application can use to associate the particular shape with a defined shape type. Default is 0.</p> <p>The possible values for this attribute are defined by the W3C XML Schema float datatype.</p>                                                                                                                                                                                                                                                                                                                                                       |
| <p>strokecolor (Shape Stroke Color)</p>                                                     | <p>Specifies the primary color of the brush to use to stroke the path of the shape. Default is black. The color attribute of the stroke element (§19.1.2.21) overrides this. Colors are typically specified as either a named color, such as red, or six hexadecimal digits representing the red, green and blue values of the color, such as #00FF30. Full details are specified in the simple type description.</p> <p>[Example:</p> <pre>&lt;v:shape ... strokecolor="red" ...&gt; &lt;/v:shape&gt;</pre>  |

| Attributes                                | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|-------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                           | <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_ColorType simple type (§20.1.2.3).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <p>stroked (Shape Stroke Toggle)</p>      | <p>Specifies whether the path defining the shape is stroked with a solid line. The stroke element (§19.1.2.21) defines other strokes. The on attribute of the stroke element overrides this attribute. Default is true.</p> <p>[Example:</p> <pre>&lt;v:shape ... fillcolor="red"   stroked="false" strokecolor="blue"...&gt; &lt;/v:shape&gt;</pre>  <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p> |
| <p>strokeweight (Shape Stroke Weight)</p> | <p>Specifies the width of the brush to use to stroke the path. Default is 1 point. If a number is given without units, the emu is used. The weight attribute of the stroke element (§19.1.2.21) overrides this attribute.</p> <p>[Example:</p> <pre>&lt;v:shape ... strokeweight="3pt" ... &gt; &lt;/v:shape&gt;</pre>  <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                   |
| <p>style (Shape Styling Properties)</p>   | <p>Specifies the CSS2 styling properties of the shape. The CSS2 (Cascading Style Sheets, Level 2) specification, a Recommendation of the World Wide Web Consortium, is available here: <a href="http://www.w3.org/TR/REC-CSS2">http://www.w3.org/TR/REC-CSS2</a>.</p> <p>This attribute uses a semi-colon delimited list of “name:value” pairs, the syntax defined by section 4.1.8 of the CSS2 specification for grouped declarations (without the</p>                                                                                                                  |

| Attributes    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |          |             |      |                                                                                                                                                                                                                                                                                                                                                                                            |        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |               |                                                                                                                                                                                                                    |

Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of</p> |
| Property      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |          |             |      |                                                                                                                                                                                                                                                                                                                                                                                            |        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |               |                                                                                                                                                                                                                    |
| flip          | <p>Specifies that the orientation of a shape is flipped. Default is no value. Allowed values are:</p> <ul style="list-style-type: none"> <li>• x - Flip along the y-axis, reversing the x-coordinates.</li> <li>• y - Flip along the x-axis, reversing the y-coordinates.</li> <li>• xy - Flip along both the y- and x-axis.</li> <li>• yx - Flip along both the x- and y-axis.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |          |             |      |                                                                                                                                                                                                                                                                                                                                                                                            |        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |               |                                                                                                                                                                                                                    |
| height        | <p>Specifies the height of the containing block of the shape. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt;- A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's height.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |          |             |      |                                                                                                                                                                                                                                                                                                                                                                                            |        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |               |                                                                                                                                                                                                                    |
| left          | <p>Specifies the position of the left of the containing block of the shape relative to the element left of it in the flow of the page. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. This property shall not be used for shapes anchored inline. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt; - A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's width.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |          |             |      |                                                                                                                                                                                                                                                                                                                                                                                            |        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |               |                                                                                                                                                                                                                    |
| margin-bottom | <p>Specifies the position of the bottom of the containing block of the shape relative to the shape anchor. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |          |             |      |                                                                                                                                                                                                                                                                                                                                                                                            |        |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |               |                                                                                                                                                                                                                    |

|            | mso-wrap-distance-               | <p>Specifies the distance from the bottom of the shape to the text that wraps around it. Default is 0 pt. This property is different</p>                                                                                                                                                          |

| Attributes | Description             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|------------|-------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|            | bottom                  | from the CSS margin property, which changes the origin of the shape to include the margin areas. This property does not change the origin.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|            | mso-wrap-distance-left  | Specifies the distance from the left side of the shape to the text that wraps around it. Default is 0 pt. This property is different from the CSS margin property, which changes the origin of the shape to include the margin areas. This property does not change the origin.                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|            | mso-wrap-distance-right | Specifies the distance from the right side of the shape to the text that wraps around it. Default is 0 pt. This property is different from the CSS margin property, which changes the origin of the shape to include the margin areas. This property does not change the origin.                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|            | mso-wrap-distance-top   | Specifies the distance from the top of the shape to the text that wraps around it. Default is 0 pt. This property is different from the CSS margin property, which changes the origin of the shape to include the margin areas. This property does not change the origin.                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|            | mso-wrap-edited         | Specifies whether the wrap coordinates were customized by the user. If the wrap coordinates are generated by an editor, this property is true; otherwise they were customized by a user. Default is false.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|            | mso-wrap-style          | <p>Specifies the wrapping mode for text in shapes in WordprocessingML documents. Default is square. Allowed values are:</p> <ul style="list-style-type: none"> <li>• square - Wraps text inside the shape in a square.</li> <li>• none - Text does not wrap.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|            | position                | <p>Specifies the kind of positioning used to place an element. Default is static. When the element is contained inside a group, this property shall be absolute. Allowed values are:</p> <ul style="list-style-type: none"> <li>• static - The element is positioned according to the normal flow of the page. The top and left properties are ignored. If the object is anchored inline, this value is used.</li> <li>• absolute - The element is positioned relative to the parent, using the top and left properties.</li> <li>• relative - The element is positioned according to the normal flow of the page, but the top and left properties are used. The overlap of overlapping elements is governed by the z-index property.</li> </ul> |

| Attributes | Description |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|------------|-------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|            | rotation    | Specifies the angle that a shape is rotated, in degrees. Default is 0. Positive angles are clockwise.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|            | top         | <p>Specifies the position of the top of the containing block of the shape relative to the element above it in the flow of the page. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. This property shall not be used for shapes anchored inline. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt;- A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's height.</li> </ul> |
|            | visibility  | <p>Specifies whether a shape is displayed. Only inherit and hidden are used; any other values are mapped to inherit. Default is inherit. Allowed values are:</p> <ul style="list-style-type: none"> <li>• hidden - The shape is not visible, but is still part of the flow of the objects in the browser. Mouse events are not processed.</li> <li>• inherit - The visibility state is inherited from the parent of the shape.</li> </ul>                                                                                                                                                                                                                                                                                                                   |
|            | width       | <p>Specifies the width of the containing block of the shape. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt;- A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's width.</li> </ul>                                                                                                                                     |
|            | z-index     | <p>Specifies the display order of overlapping shapes. Default is 0. This property shall not be used for shapes anchored inline. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Uses the order that the shapes appear in the page, bottom to top.</li> <li>• &lt;order&gt;- A number that represents the stacking precedence. Shapes with higher numbers are placed on</li> </ul>                                                                                                                                                                                                                                                                                                                                                   |

| Attributes | Description                                                                                                                                    |                                                                                                                                                                                                                                                                                                                                                                                                     |

|            |                                                                                                                                                | top of those with lower numbers. Negative numbers are allowed.                                                                                                                                                                                                                                                                                                                                      |
|            | The following properties are only used by the textbox element (§19.1.2.22):                                                                    |                                                                                                                                                                                                                                                                                                                                                                                                     |
|            | Property                                                                                                                                       | Description                                                                                                                                                                                                                                                                                                                                                                                         |
|            | direction                                                                                                                                      | Specifies the direction of the text in the textbox. Default is ltr. This property is superceded by the mso-direction-alt property if that is specified. Allowed values are: <ul style="list-style-type: none"><li>ltr - Text is displayed left-to-right.</li><li>rtl - Text is displayed right-to-left.</li></ul>                                                                                   |
|            | layout-flow                                                                                                                                    | Determines the flow of the text layout in a textbox. Default is horizontal. Allowed values are: <ul style="list-style-type: none"><li>horizontal - Text is displayed horizontally.</li><li>vertical - Text is displayed vertically.</li><li>vertical-ideographic - Ideographic text is displayed vertically.</li><li>horizontal-ideographic - Ideographic text is displayed horizontally.</li></ul> |
|            | mso-direction-alt                                                                                                                              | Specifies an alternate direction for text in textboxes. Overrides the direction property. The only allowed value is context.                                                                                                                                                                                                                                                                        |
|            | mso-fit-shape-to-text                                                                                                                          | Specifies whether the shape stretches to fit the text in the textbox. Default is false.                                                                                                                                                                                                                                                                                                             |
|            | mso-fit-text-to-shape                                                                                                                          | Specifies whether the text stretches to fit the textbox. Default is false.                                                                                                                                                                                                                                                                                                                          |
|            | mso-layout-flow-alt                                                                                                                            | Specifies the alternate layout flow for text in textboxes. This property is used instead of layout-flow when the layout flow is from bottom to top for non-ideographic languages. Its only value is bottom-to-top.                                                                                                                                                                                  |
|            | mso-next-textbox                                                                                                                               | Specifies the ID of the next textbox in a series. Used to keep track of a set of linked textboxes. Default is no value.                                                                                                                                                                                                                                                                             |
| mso-rotate | Specifies a specific rotation value for text in a textbox. Default is 0. Allowed values are: <ul style="list-style-type: none"><li>0</li></ul> |                                                                                                                                                                                                                                                                                                                                                                                                     |

| Attributes                                                                   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |             |      |                                                                                                                                                                                                                                                     |             |                                                                                                                          |           |                                                                                                                                                          |            |                                                                                                                                                                                                                                                                                    |  |

This window is not named. | _media | Specifies that the linked document is loaded into the browser's multimedia pane. | _parent | Specifies that the linked document is loaded into the immediate parent of the document containing the link. | _search | Specifies that the linked document is loaded into the browser's search pane. | _self | Specifies that the linked document is loaded into the window in which the link was clicked (the active window). | _top | Specifies that the linked document is loaded into the topmost window. |
| Value                             | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |       |             |              |                                                                                  |        |                                                                                                 |        |                                                                                  |         |                                                                                                             |         |                                                                              |       |                                                                                                                 |      |                                                                       |
| <targetname>                      | String containing the name of the frame or window in which to load the document.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |       |             |              |                                                                                  |        |                                                                                                 |        |                                                                                  |         |                                                                                                             |         |                                                                              |       |                                                                                                                 |      |                                                                       |
| _blank                            | Specifies that the linked document is loaded into a new blank window. This window is not named.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |       |             |              |                                                                                  |        |                                                                                                 |        |                                                                                  |         |                                                                                                             |         |                                                                              |       |                                                                                                                 |      |                                                                       |
| _media                            | Specifies that the linked document is loaded into the browser's multimedia pane.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |       |             |              |                                                                                  |        |                                                                                                 |        |                                                                                  |         |                                                                                                             |         |                                                                              |       |                                                                                                                 |      |                                                                       |
| _parent                           | Specifies that the linked document is loaded into the immediate parent of the document containing the link.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |       |             |              |                                                                                  |        |                                                                                                 |        |                                                                                  |         |                                                                                                             |         |                                                                              |       |                                                                                                                 |      |                                                                       |
| _search                           | Specifies that the linked document is loaded into the browser's search pane.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |       |             |              |                                                                                  |        |                                                                                                 |        |                                                                                  |         |                                                                                                             |         |                                                                              |       |                                                                                                                 |      |                                                                       |
| _self                             | Specifies that the linked document is loaded into the window in which the link was clicked (the active window).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |       |             |              |                                                                                  |        |                                                                                                 |        |                                                                                  |         |                                                                                                             |         |                                                                              |       |                                                                                                                 |      |                                                                       |
| _top                              | Specifies that the linked document is loaded into the topmost window.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |       |             |              |                                                                                  |        |                                                                                                 |        |                                                                                  |         |                                                                                                             |         |                                                                              |       |                                                                                                                 |      |                                                                       |

| Attributes                                                                                              | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|---------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                                                                         | <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                                                                                                                                                                                                                                                                                                       |
| <p>title (Shape Title)</p>                                                                              | <p>Specifies the text displayed when the mouse pointer moves over the shape. Default is no value.</p> <p>[Example:</p> <pre>&lt;v:shape ... title="tooltip" ... &gt; &lt;/v:shape&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                                                                                       |
| <p>userdrawn (Exists In Master Slide)</p> <p>Namespace:<br/>urn:schemas-microsoft-com:office:office</p> | <p>Specifies whether the user has added the shape to a master slide. Default is false. Used by PresentationML.</p> <p>[Example:</p> <pre>&lt;v:shape ... o:userdrawn="true" ... &gt; &lt;/v:shape&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p>                                                                                                                                 |
| <p>userhidden (Hide Script Anchors)</p> <p>Namespace:<br/>urn:schemas-microsoft-com:office:office</p>   | <p>Specifies whether a script anchor is hidden. Default is false. If true, script anchors stay hidden even if the shape is otherwise visible. A script anchor is the visual representation of a script that when displayed in an application.</p> <p>[Example:</p> <pre>&lt;v:shape ... o:userhidden="true" ... &gt; &lt;/v:shape&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p> |
| <p>wrapcoords (Shape Bounding Polygon)</p>                                                              | <p>Specifies the bounding polygon that surrounds a shape. This is specified using a comma-delimited list of x and y coordinates: "x1,y1,x2,y2,x3,y3,..." This is used when text is tightly wrapped around a shape. Default is no value until the mso-wrap-mode style attribute is set to tight or through.</p>                                                                                                                                                         |

| Attributes | Description                                                                                                                                                                                                                         |
|------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|            | <p>[Example:</p> <pre>&lt;v:shape ...   wrapcoords="0,0 0,200, 200,200, 200,0" ... &gt; &lt;/v:shape&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p> |

[Note: The W3C XML Schema definition of this element's content model ([CT\\_RoundRect](#)) is located in §A.6.1.  
end note]

#### 19.1.2.18 shadow (Shadow Effect)

This element adds shadow effects to a shape. The on attribute shall be true for the shadow to be displayed.

[Example:

```
<v:shadow on="true" type="perspective"
  matrix="1.25,-2,,1.5,,.000001"
  offset="38pt,-6pt">
</v:shadow>
```

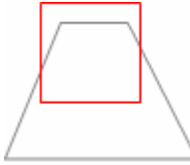

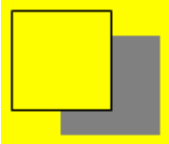

end example]

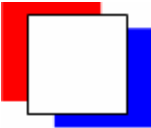

| Attributes                   | Description                                                                                                                                                                                                                                                                                                                   |
|------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| color (Shadow Primary Color) | <p>Specifies the color of the primary shadow. Default is gray (RGB 128,128,128).</p> <p>[Example:</p> <pre>&lt;v:shadow on="true" color="green"&gt; &lt;/v:shadow&gt;</pre> <p>Applied to a simple square the shadow looks like this:</p>  |

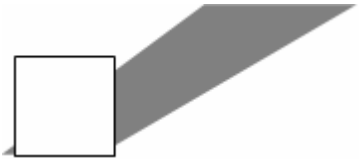

| Attributes                                | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|-------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                           | <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_ColorType simple type (§20.1.2.3).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
| <p>color2 (Shadow Secondary Color)</p>    | <p>Specifies the color of the second shadow, or highlight in an embossed or engraved shadow. Default is light gray (RGB 203,203,203).</p> <p>[Example:</p> <pre>&lt;v:shadow on="true" type="double"   color="green" color2="blue"&gt; &lt;/v:shadow&gt;</pre>  <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_ColorType simple type (§20.1.2.3).</p>                                                                                                                               |
| <p>id (Unique Identifier)</p>             | <p>Specifies a unique identifier that can be used to reference a VML object.</p> <p>Default is no value.</p> <p>[Example:</p> <pre>&lt;v:shape ... id="myShape" ... &gt; &lt;/v:shape&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                                                                                                                                                                                                                      |
| <p>matrix (Shadow Perspective Matrix)</p> | <p>Specifies a perspective transform for a shadow. Default is no value.</p> <p>The matrix is given in the form "s<sub>xx</sub>, s<sub>xy</sub>, s<sub>yx</sub>, s<sub>yy</sub>, p<sub>x</sub>, p<sub>y</sub>" where s = scale and p = perspective. If the offset attribute is in absolute units then p<sub>x</sub>, p<sub>y</sub> are in 1/EMU units; otherwise they are an inverse fraction of the shape size.</p> <p>[Example: The following snippets explain the matrix parameters. The shadow is applied to a simple square with no fill and a red stroke color (note there is a default shadow offset):</p> |

| Attributes | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |

| Attributes                     | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|--------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                | <p><i>end example]</i></p> <p>[Example:</p> <pre>&lt;v:shadow on="true" type="perspective"   matrix="1.25,-2,,1.5,,.000001"   offset="38pt,-6pt"&gt; &lt;/v:shadow&gt;</pre>  <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                                                                                                                                                                                                          |
| obscured (Shadow Transparency) | <p>Specifies whether a shadow is transparent. Default is false. If true, the shadow is transparent if there is no fill on the shape.</p> <p>[Example:</p> <pre>&lt;v:background fillcolor="yellow"/&gt; &lt;v:shape style="width:50;height:50"   filled="false" fillcolor="red"   path="m 0,0 l 0,1000 1000,1000 1000,0 x e"&gt;   &lt;v:shadow on="true" offset="50%,25%"     obscured="true"&gt;   &lt;/v:shadow&gt; &lt;/v:shape&gt;</pre>  <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p> |
| offset (Shadow Primary Offset) | <p>Specifies the primary shadow's x,y offset from the shape's location. Default is "2pt,2pt".</p> <p>Values are either an absolute measurement or a fractional value of the shape dimensions, from –50% to 50%.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

| Attributes                        | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|-----------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                   | <p>[Example:</p> <pre>&lt;v:shadow on="true" offset="50%,25%"&gt; &lt;/v:shadow&gt;</pre>  <p>end example]</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                                                                                                       |
| offset2 (Shadow Secondary Offset) | <p>Specifies the secondary shadow's x,y offset from the shape's location. Default is "-2pt,-2pt".</p> <p>[Example:</p> <pre>&lt;v:shadow type="double" on="true" color="blue" offset="10pt,5pt" color2="red" offset2="-10pt,-5pt"&gt; &lt;/v:shadow&gt;</pre>  <p>end example]</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p> |
| on (Shadow Toggle)                | <p>Specifies whether to show a shadow. Default is true.</p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p>                                                                                                                                                                                                                                                                                                     |
| opacity (Shadow Opacity)          | <p>Specifies the opacity of the shadow. Default is 1. This numeric value can also be specified in 1/65536-ths if a trailing "f" is supplied. [Example: For example, a value of "52429f" represents 52429/65536 or 0.8. end example]</p> <p>[Example:</p> <pre>&lt;v:shadow type="double" on="true" opacity=".5" color="blue" offset="10pt,5pt"</pre>                                                                                                                   |

|            | emboss                                                                                           | The shadow has an embossed look. |
|            | The possible values for this attribute are defined by the ST_ShadowType simple type (§19.1.3.6). |                                  |

[Note: The W3C XML Schema definition of this element's content model ([CT\\_Shadow](#)) is located in §A.6.1. *end note*]

### 19.1.2.19 shape (Shape Definition)

This element is used to describe a shape, the core object in VML. This element can appear by itself or within a group element (§19.1.2.7). If a shapetype element (§19.1.2.20) is referenced using the type attribute, any attributes specified in the shape override those found in the shapetype.

[Example:

```
<v:shape style="position:absolute;top:50;left:20;width:50;height:50"
  path="m 0,0 l 0,1000 1000,1000 1000,0 x e">
  <v:shadow on="true" type="perspective"
    matrix="1.25,-2,,1.5,,.000001" offset="38pt,-6pt"/>
</v:shape>
```

```
<v:shape style="position:absolute;top:50;left:20;width:50;height:50"
  fillcolor="yellow" path="m 0,0 l 0,1000 1000,1000 1000,0 x e">
  <v:extrusion on="true" lightposition="0,-2000,10000"/>
</v:shape>
```

*end example*]

| Attributes                  | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|-----------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| adj (Adjustment Parameters) | <p>Specifies a comma-delimited list of parameters, or adjustment values, used to define values for a parameterized formula. Values can be omitted. There can be up to 8 adjust values. Each value is referenced using # followed by a number corresponding to the zero-based index for that value in the list of adjustment values. [Example: For example, #2 references the second value in the adj list. <i>end example</i>]</p> <p>[Example: The following shape uses formulas to define a simple rectangle. The adj values</p> |

| <p>bwmode (Black-and-White Mode)</p> <p>Namespace:<br/>urn:schemas-microsoft-com:office:office</p>          | <p>Specifies how a shape renders for black-and-white output devices. When a shape is printed on a black-and-white printer or displayed in a black-and-white view in an application, several options are possible. Default is auto, which uses o:bwnormal for normal black-and-white rendering and o:bwpure for pure black-and-white rendering.</p> <p>bwnormal and bwpure are subordinate to bwmode. If bwmode is "auto" then the value for bwnormal or bwpure is used depending on what the output format is. An application can define for itself what, if any, difference there is between normal B&amp;W and pure B&amp;W. [Example: Normal B&amp;W might allow greyscale and pure B&amp;W might not. <i>end example]</i></p> <p>[Example: This shape renders in grayscale in a black-and-white environment:</p> <pre>&lt;v:shape ... o:bwmode="grayscale" ... &gt; &lt;/v:shape&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_BWMode simple type (§19.2.3.3).</p> |
| <p>bwnormal (Normal Black-and-White Mode)</p> <p>Namespace:<br/>urn:schemas-microsoft-com:office:office</p> | <p>Specifies the black-and-white mode for normal black-and-white output devices. Default is auto.</p> <p>[Example: This shape renders in a pale grayscale in a normal black-and-white environment:</p> <pre>&lt;v:shape ... o:bwmode="auto" o:bwnormal="lightgrayscale" ... &gt; &lt;/v:shape&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_BWMode simple type (§19.2.3.3).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
| <p>bwpure (Pure Black-and-White Mode)</p> <p>Namespace:<br/>urn:schemas-microsoft-com:office:office</p>     | <p>Specifies the black-and-white mode for pure black-and-white output devices. Default is auto.</p> <p>[Example: This shape renders in high contrast when in a pure black-and-white environment:</p> <pre>&lt;v:shape ... o:bwmode="auto" o:bwpure="highcontrast" ... &gt; &lt;/v:shape&gt;</pre>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |

| <p>cliptowrap (Clip to Wrapping Polygon)</p> <p>Namespace:<br/>urn:schemas-microsoft-com:office:office</p> | <p>Specifies that the clipping region for the shape aligns with the wrapping polygon that tightly surrounds the entire shape (essentially, that the shape shall not be drawn beyond its wrapping polygon's extents – if it does, the shape shall be clipped). Default is false.</p> <p>[Example:</p> <pre>&lt;v:shape ... o:cliptowrap="true"&gt; &lt;/v:shape&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| <p>connectortype (Shape Connector Type)</p> <p>Namespace:<br/>urn:schemas-microsoft-com:office:office</p>  | <p>Specifies the kind of connector used for joining shapes. Default is straight.</p> <p>[Example:</p> <pre>&lt;v:shape ... o:connectortype="elbow" ... &gt; &lt;/v:shape&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the ST_ConnectorType simple type (§19.2.3.7).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
| <p>coordorigin (Coordinate Space Origin)</p>                                                               | <p>Specifies the coordinate of the top left corner of the shape's coordinate space. This determines the position of the (0,0) coordinate space origin within the shape's bounding box. Default is "0,0", which places the (0,0) origin at the top left corner of the bounding box.</p> <p>This affects shape properties that specify coordinate positions, such as the path attribute. Thus a path can be defined against a generic (0,0) origin and the coordorigin value translates the entire path within the shape's bounding space.</p> <p>[Example: The horizontal and vertical coordinate space ranges from -100 to +100 because the coordinate space (coordsize) is 200 by 200 and the top left coordinate is (-100,-100). The (0,0) origin lies at the center of the shape's bounding box, as evidenced by the position of the shape's path within the coordinate space:</p> <pre>&lt;v:shape ... coordsize="200,200" coordorigin="-100,-100" path="m 0,0 l 0,50, 50,50, 50,0 x e"&gt; &lt;/v:shape&gt;</pre> |

| Attributes                                           | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                      |  <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>coordsize</b><br>(Coordinate Space Size)          | <p>Specifies the size of the shape's coordinate space in coordinate units. Default is "1000,1000".</p> <p>The physical size of a coordinate unit length is determined by both the size of the coordinate space (coordsize) and the size of the shape (style width and height). The coordsize attribute defines the number of horizontal and vertical subdivisions into which the shape's bounding box is divided. The combination of coordsize and style width/height effective scales the shape anisotropically.</p> <p>[Example: The path is 50 units wide and tall, which is 25% of the size of the coordinate space:</p> <pre>&lt;v:shape ... coordsize="200,200"   coordorigin="-100,-100"   path="m 0,0 l 0,50, 50,50, 50,0 x e"&gt; &lt;/v:shape&gt;</pre>  <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p> |
| <b>dgmlayout</b><br>(Diagram Node Layout Identifier) | <p>Specifies the kind of automatic layout to apply to the diagram node. This is only meaningful if the shape is a node in an organization chart, which is denoted by the orgchart value of the editas attribute of the group element.</p> <p>[Example:</p> <pre>&lt;v:shape ... dgmlayout="1"&gt; &lt;/v:shape&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_DiagramLayout simple type (§19.2.3.10).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| Attributes                                                                                                                    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| spt (Optional Number)<br><br>Namespace:<br>urn:schemas-microsoft-com:office:office  | <p>Specifies an optional number that an application can use to associate the particular shape with a defined shape type. Default is 0.</p> <p>The possible values for this attribute are defined by the W3C XML Schema float datatype.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
| strokecolor (Shape Stroke Color)                                                    | <p>Specifies the primary color of the brush to use to stroke the path of the shape. Default is black. The color attribute of the stroke element (§19.1.2.21) overrides this. Colors are typically specified as either a named color, such as red, or six hexadecimal digits representing the red, green and blue values of the color, such as #00FF30. Full details are specified in the simple type description.</p> <p>[Example:</p> <pre>&lt;v:shape ... strokecolor="red" ...&gt; &lt;/v:shape&gt;</pre>  <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_ColorType simple type (§20.1.2.3).</p> |
| stroked (Shape Stroke Toggle)                                                       | <p>Specifies whether the path defining the shape is stroked with a solid line. The stroke element (§19.1.2.21) defines other strokes. The on attribute of the stroke element overrides this attribute. Default is true.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| Attributes                                    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|-----------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                               | <p>[Example:</p> <pre>&lt;v:shape ... fillcolor="red"   stroked="false" strokecolor="blue"...&gt; &lt;/v:shape&gt;</pre>  <p>end example]</p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p>                                                                                                                                                                                                                                                                                                                                                                      |
| <p>strokeweight<br/>(Shape Stroke Weight)</p> | <p>Specifies the width of the brush to use to stroke the path. Default is 1 point. If a number is given without units, the emu is used. The weight attribute of the stroke element (§19.1.2.21) overrides this attribute.</p> <p>[Example:</p> <pre>&lt;v:shape ... strokeweight="3pt" ... &gt; &lt;/v:shape&gt;</pre>  <p>end example]</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                                                                                                            |
| <p>style (Shape Styling Properties)</p>       | <p>Specifies the CSS2 styling properties of the shape. The CSS2 (Cascading Style Sheets, Level 2) specification, a Recommendation of the World Wide Web Consortium, is available here: <a href="http://www.w3.org/TR/REC-CSS2">http://www.w3.org/TR/REC-CSS2</a>.</p> <p>This attribute uses a semi-colon delimited list of “name:value” pairs, the syntax defined by section 4.1.8 of the CSS2 specification for grouped declarations (without the surrounding braces). The following tables define the allowed properties and the VML treatment of each.</p> <p>[Example:</p> <pre>&lt;v:shape ... style='position:absolute;width:100pt;height:50pt' ... &gt; &lt;/v:shape&gt;</pre> <p>end example]</p> |

|            | Property      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|            | flip          | <p>Specifies that the orientation of a shape is flipped. Default is no value. Allowed values are:</p> <ul style="list-style-type: none"> <li>• x - Flip along the y-axis, reversing the x-coordinates.</li> <li>• y - Flip along the x-axis, reversing the y-coordinates.</li> <li>• xy - Flip along both the y- and x-axis.</li> <li>• yx - Flip along both the x- and y-axis.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                     |
|            | height        | <p>Specifies the height of the containing block of the shape. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt;- A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's height.</li> </ul>                                                                                                                                      |
|            | left          | <p>Specifies the position of the left of the containing block of the shape relative to the element left of it in the flow of the page. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. This property shall not be used for shapes anchored inline. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt; - A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's width.</li> </ul> |
|            | margin-bottom | <p>Specifies the position of the bottom of the containing block of the shape relative to the shape anchor. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt;- A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's height.</li> </ul>                                                                                         |

| Attributes | Description             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|------------|-------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|            | margin-left             | <p>Specifies the position of the left of the containing block of the shape relative to the shape anchor. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt;- A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's width.</li> </ul>   |
|            | margin-right            | <p>Specifies the position of the right of the containing block of the shape relative to the shape anchor. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt; - A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's width.</li> </ul> |
|            | margin-top              | <p>Specifies the position of the top of the containing block of the shape relative to the shape anchor. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt;- A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's height.</li> </ul>   |
|            | mso-position-horizontal | <p>Specifies the horizontal positioning data for objects in WordprocessingML documents. Default is absolute. Allowed values are:</p> <ul style="list-style-type: none"> <li>• absolute</li> <li>• left</li> <li>• center</li> <li>• right</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                  |

| Attributes | Description                      |                                                                                                                                                                                                                                                                                                   |
|------------|----------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|            |                                  | <ul style="list-style-type: none"> <li>• inside</li> <li>• outside</li> </ul>                                                                                                                                                                                                                     |
|            | mso-position-horizontal-relative | <p>Specifies relative horizontal position data for objects in WordprocessingML documents. This modifies the mso-position-horizontal property. Default is text. Allowed values are:</p> <ul style="list-style-type: none"> <li>• margin</li> <li>• page</li> <li>• text</li> <li>• char</li> </ul> |
|            | mso-position-vertical            | <p>Specifies the vertical positioning data for objects in WordprocessingML documents. Default is absolute. Allowed values are:</p> <ul style="list-style-type: none"> <li>• absolute</li> <li>• top</li> <li>• center</li> <li>• bottom</li> <li>• inside</li> <li>• outside</li> </ul>           |
|            | mso-position-vertical-relative   | <p>Specifies relative vertical position data for objects in WordprocessingML documents. This modifies the mso-position-vertical property. Default is text. Allowed values are:</p> <ul style="list-style-type: none"> <li>• margin</li> <li>• page</li> <li>• text</li> <li>• line</li> </ul>     |
|            | mso-wrap-distance-bottom         | <p>Specifies the distance from the bottom of the shape to the text that wraps around it. Default is 0 pt. This property is different from the CSS margin property, which changes the origin of the shape to include the margin areas. This property does not change the origin.</p>               |
|            | mso-wrap-distance-left           | <p>Specifies the distance from the left side of the shape to the text that wraps around it. Default is 0 pt. This property is different from the CSS margin property, which changes the origin of the shape to include the margin areas. This property does not change the origin.</p>            |
|            | mso-wrap-                        | <p>Specifies the distance from the right side of the shape to the text</p>                                                                                                                                                                                                                        |

| Attributes | Description           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|------------|-----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|            | distance-right        | that wraps around it. Default is 0 pt. This property is different from the CSS margin property, which changes the origin of the shape to include the margin areas. This property does not change the origin.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|            | mso-wrap-distance-top | Specifies the distance from the top of the shape to the text that wraps around it. Default is 0 pt. This property is different from the CSS margin property, which changes the origin of the shape to include the margin areas. This property does not change the origin.                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|            | mso-wrap-edited       | Specifies whether the wrap coordinates were customized by the user. If the wrap coordinates are generated by an editor, this property is true; otherwise they were customized by a user. Default is false.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|            | mso-wrap-style        | <p>Specifies the wrapping mode for text in shapes in WordprocessingML documents. Default is square. Allowed values are:</p> <ul style="list-style-type: none"> <li>• square - Wraps text inside the shape in a square.</li> <li>• none - Text does not wrap.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|            | position              | <p>Specifies the kind of positioning used to place an element. Default is static. When the element is contained inside a group, this property shall be absolute. Allowed values are:</p> <ul style="list-style-type: none"> <li>• static - The element is positioned according to the normal flow of the page. The top and left properties are ignored. If the object is anchored inline, this value is used.</li> <li>• absolute - The element is positioned relative to the parent, using the top and left properties.</li> <li>• relative - The element is positioned according to the normal flow of the page, but the top and left properties are used. The overlap of overlapping elements is governed by the z-index property.</li> </ul> |
|            | rotation              | Specifies the angle that a shape is rotated, in degrees. Default is 0. Positive angles are clockwise.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|            | top                   | <p>Specifies the position of the top of the containing block of the shape relative to the element above it in the flow of the page. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. This property shall not be used for shapes anchored inline. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> </ul>                                                                                                                                                                                                                                                                               |

| Attributes | Description                                                                                                                                                                                                                                                                                                                                                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |          |             |           |

| Property   | Description                                                                                                                                                                                                                                                                                                                                                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |          |             |           |
| direction  | Specifies the direction of the text in the textbox. Default is ltr. This property is superceded by the mso-direction-alt property if that is specified. Allowed values are:                                                                                                                                                                                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |          |             |           |

| Attributes | Description           |                                                                                                                                                                                                                                                                                                                                                                                                                         |
|------------|-----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|            |                       | <ul style="list-style-type: none"> <li>• ltr - Text is displayed left-to-right.</li> <li>• rtl - Text is displayed right-to-left.</li> </ul>                                                                                                                                                                                                                                                                            |
|            | layout-flow           | <p>Determines the flow of the text layout in a textbox. Default is horizontal. Allowed values are:</p> <ul style="list-style-type: none"> <li>• horizontal - Text is displayed horizontally.</li> <li>• vertical - Text is displayed vertically.</li> <li>• vertical-ideographic - Ideographic text is displayed vertically.</li> <li>• horizontal-ideographic - Ideographic text is displayed horizontally.</li> </ul> |
|            | mso-direction-alt     | Specifies an alternate direction for text in textboxes. Overrides the direction property. The only allowed value is context.                                                                                                                                                                                                                                                                                            |
|            | mso-fit-shape-to-text | Specifies whether the shape stretches to fit the text in the textbox. Default is false.                                                                                                                                                                                                                                                                                                                                 |
|            | mso-fit-text-to-shape | Specifies whether the text stretches to fit the textbox. Default is false.                                                                                                                                                                                                                                                                                                                                              |
|            | mso-layout-flow-alt   | Specifies the alternate layout flow for text in textboxes. This property is used instead of layout-flow when the layout flow is from bottom to top for non-ideographic languages. Its only value is bottom-to-top.                                                                                                                                                                                                      |
|            | mso-next-textbox      | Specifies the ID of the next textbox in a series. Used to keep track of a set of linked textboxes. Default is no value.                                                                                                                                                                                                                                                                                                 |
|            | mso-rotate            | <p>Specifies a specific rotation value for text in a textbox. Default is 0. Allowed values are:</p> <ul style="list-style-type: none"> <li>• 0</li> <li>• 90</li> <li>• 180</li> <li>• -90</li> </ul>                                                                                                                                                                                                                   |
|            | mso-text-scale        | Specifies the scaling factor for fitting text to shapes. Default is 0. This property is only used if mso-fit-text-to-shape is true.                                                                                                                                                                                                                                                                                     |
|            | v-text-anchor         | Specifies the vertical anchoring of text in a textbox. Default is top. The alignment of a text anchor only becomes evident if mso-fit-text-to-shape is false. This property is different from the vertical-align CSS property, which is used for ideographic languages. Allowed values are:                                                                                                                             |

| Attributes | Description                                                                  |                                                                                                                                                                                                                                                                              |
|------------|------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|            |                                                                              | <ul style="list-style-type: none"><li>• top</li><li>• middle</li><li>• bottom</li><li>• top-center</li><li>• middle-center</li><li>• bottom-center</li><li>• top-baseline</li><li>• bottom-baseline</li><li>• top-center-baseline</li><li>• bottom-center-baseline</li></ul> |
|            | The following properties are only used by the textpath element (§19.1.2.23): |                                                                                                                                                                                                                                                                              |
|            |                                                                              |                                                                                                                                                                                                                                                                              |
|            |                                                                              |                                                                                                                                                                                                                                                                              |
|            |                                                                              |                                                                                                                                                                                                                                                                              |
|            |                                                                              |                                                                                                                                                                                                                                                                              |
|            |                                                                              |                                                                                                                                                                                                                                                                              |
|            |                                                                              |                                                                                                                                                                                                                                                                              |

|            |                       | <p>bold</p> <p>bolder</p> <p>500</p> <p>600</p> <p>700</p> <p>800</p> <p>900</p> <p>Treated as bold.</p>                                                                                                                                                                                             |
|            | mso-text-shadow       | Specifies whether a shadow is applied to the text on a text path. Default is false.                                                                                                                                                                                                                  |
|            | text-decoration       | <p>Specifies the style of text decoration. Default is none. The values are the same as those of the CSS text-decoration property. Allowed values are:</p> <ul style="list-style-type: none"> <li>• none</li> <li>• underline</li> <li>• overline</li> <li>• line-through</li> <li>• blink</li> </ul> |
|            | v-rotate-letters      | Specifies whether the letters of the text are rotated counterclockwise by 90 degrees. Default is false.                                                                                                                                                                                              |
|            | v-same-letter-heights | Specifies whether all letters are the same height regardless of initial case. If true, the lowercase letters are stretched to the height of the uppercase letters. Default is false.                                                                                                                 |
|            | v-text-align          | <p>Specifies the alignment of text. Default is left. Allowed values are:</p> <ul style="list-style-type: none"> <li>• left</li> </ul>                                                                                                                                                                |

| Attributes                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  | Description         |                                                                                                                                                                                                                                                                                                                                                                                        |

|                                     | <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p>                                                                                                                                                                                                                                                                                                                                                                                                                         |
| wrapcoords (Shape Bounding Polygon) | <p>Specifies the bounding polygon that surrounds a shape. This is specified using a comma-delimited list of x and y coordinates: "x1,y1,x2,y2,x3,y3,..." This is used when text is tightly wrapped around a shape. Default is no value until the mso-wrap-mode style attribute is set to tight or through.</p> <p>[Example:</p> <pre>&lt;v:shape ...   wrapcoords="0,0 0,200, 200,200, 200,0" ... &gt; &lt;/v:shape&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p> |

[Note: The W3C XML Schema definition of this element's content model ([CT\\_Shape](#)) is located in §A.6.1. *end note]*

### 19.1.2.20 shapetype (Shape Template)

This element defines a shape template that can be used to create other shapes. Shapetype is identical to the shape element (§19.1.2.19) except it cannot reference another shapetype element. The type attribute shall not be used with shapetype. Attributes defined in the shape override any that appear in the shapetype. CSS positioning attributes (such as top, width, z-index, rotation, flip) are not passed to a shape from a shapetype. To use this element, create a shapetype with a specific id attribute. Then create a shape and reference the shapetype's id using the type attribute.

[Example:

```
<v:shapetype id="mytype" fillcolor="silver" strokecolor="blue">
  <v:path v="m 0,0 l 0,1000, 1000,1000, 1000,0 x e"/>
  <v:fill on="true" type="gradient" color2="navy" angle="-45"/>
</v:shapetype>
<v:shape type="#mytype"
  style="position:absolute;top:10;left:10;width:50;height:50"/>
<v:shape type="#mytype" fillcolor="teal"
  style="position:absolute;top:10;left:75;width:75;height:50"/>
<v:shape type="#mytype"
  style="position:absolute;top:10;left:165;width:50;height:50">
```

```
<v:fill type="solid"/>
</v:shape>
<v:shape type="#mytype" path="m 500,0 l 1000,1000 0,1000 x e"
style="position:absolute;top:10;left:230;width:50;height:50"/>
```

*end example]*

| Attributes                  | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|-----------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| adj (Adjustment Parameters) | <p>Specifies a comma-delimited list of parameters, or adjustment values, used to define values for a parameterized formula. Values can be omitted. There can be up to 8 adjust values. Each value is referenced using # followed by a number corresponding to the zero-based index for that value in the list of adjustment values. [Example: For example, #2 references the second value in the adj list. <i>end example]</i></p> <p>[Example: The following shape uses formulas to define a simple rectangle. The adj values are referenced by the eqn attribute of the f element (§19.1.2.4) and in turn referenced by the path element (§19.1.2.14).</p> <pre>&lt;v:shape   coordorigin="0 0" coordsize="200 200"   style="position:relative;top:30;left:30;width:20;height:20"   adj="1, 1, 1, 200, 200, 200, 200, 1"&gt;   &lt;v:path v="m @0,@1 l @2,@3, @4,@5, @6,@7 x e"/&gt;   &lt;v:formulas&gt;     &lt;v:f eqn="val #0"/&gt;     &lt;v:f eqn="val #1"/&gt;     &lt;v:f eqn="val #2"/&gt;     &lt;v:f eqn="val #3"/&gt;     &lt;v:f eqn="val #4"/&gt;     &lt;v:f eqn="val #5"/&gt;     &lt;v:f eqn="val #6"/&gt;     &lt;v:f eqn="val #7"/&gt;   &lt;/v:formulas&gt; &lt;/v:shape&gt;</pre> <p>This is the equivalent of:</p> <pre>&lt;v:shape   coordorigin="0 0" coordsize="200 200"   style="position:relative;top:30;left:30;width:20;height:20"   path="m 1,1 l 1,200, 200,200, 200,1 x e"&gt; &lt;/v:shape&gt;</pre> <p><i>end example]</i></p> |

| bwmode (Black-<br>and-White Mode)<br><br>Namespace:<br>urn:schemas-<br>microsoft-<br>com:office:office  | <p>Specifies how a shape renders for black-and-white output devices. When a shape is printed on a black-and-white printer or displayed in a black-and-white view in an application, several options are possible. Default is auto, which uses o:bwnormal for normal black-and-white rendering and o:bwpure for pure black-and-white rendering.</p> <p>bwnormal and bwpure are subordinate to bwmode. If bwmode is "auto" then the value for bwnormal or bwpure is used depending on what the output format is. An application can define for itself what, if any, difference there is between normal B&amp;W and pure B&amp;W. [Example: Normal B&amp;W might allow greyscale and pure B&amp;W might not. end example]</p> <p>[Example: This shape renders in grayscale in a black-and-white environment:</p> <pre>&lt;v:shape ... o:bwmode="grayscale" ... &gt; &lt;/v:shape&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the ST_BWMode simple type (§19.2.3.3).</p> |
| bwnormal (Normal<br>Black-and-White<br>Mode)<br><br>Namespace:                                          | <p>Specifies the black-and-white mode for normal black-and-white output devices. |--------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| (Coordinate Space Origin)            | <p>determines the position of the (0,0) coordinate space origin within the shape's bounding box. Default is "0,0", which places the (0,0) origin at the top left corner of the bounding box.</p> <p>This affects shape properties that specify coordinate positions, such as the path attribute. Thus a path can be defined against a generic (0,0) origin and the coordorigin value translates the entire path within the shape's bounding space.</p> <p>[<i>Example:</i> The horizontal and vertical coordinate space ranges from -100 to +100 because the coordinate space (coordsize) is 200 by 200 and the top left coordinate is (-100,-100). The (0,0) origin lies at the center of the shape's bounding box, as evidenced by the position of the shape's path within the coordinate space:</p> <pre>&lt;v:shape ... coordsize="200,200"   coordorigin="-100,-100"   path="m 0,0 l 0,50, 50,50, 50,0 x e"&gt; &lt;/v:shape&gt;</pre>  <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p> |
| coordsize<br>(Coordinate Space Size) | <p>Specifies the size of the shape's coordinate space in coordinate units. Default is "1000,1000".</p> <p>The physical size of a coordinate unit length is determined by both the size of the coordinate space (coordsize) and the size of the shape (style width and height). The coordsize attribute defines the number of horizontal and vertical subdivisions into which the shape's bounding box is divided. The combination of coordsize and style width/height effective scales the shape anisotropically.</p> <p>[<i>Example:</i> The path is 50 units wide and tall, which is 25% of the size of the coordinate space:</p> <pre>&lt;v:shape ... coordsize="200,200"   coordorigin="-100,-100"   path="m 0,0 l 0,50, 50,50, 50,0 x e"&gt; &lt;/v:shape&gt;</pre>                                                                                                                                                                                                                                                                                               |

| Property                                      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |          |             |      |                                                                                                                                                                                                                                                                                                                                                                                            |
| flip                                          | <p>Specifies that the orientation of a shape is flipped. Default is no value. Allowed values are:</p> <ul style="list-style-type: none"> <li>• x - Flip along the y-axis, reversing the x-coordinates.</li> <li>• y - Flip along the x-axis, reversing the y-coordinates.</li> <li>• xy - Flip along both the y- and x-axis.</li> <li>• yx - Flip along both the x- and y-axis.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |          |             |      |                                                                                                                                                                                                                                                                                                                                                                                            |

| Attributes | Description   |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|------------|---------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|            | height        | <p>Specifies the height of the containing block of the shape. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt;- A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's height.</li> </ul>                                                                                                                                      |
|            | left          | <p>Specifies the position of the left of the containing block of the shape relative to the element left of it in the flow of the page. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. This property shall not be used for shapes anchored inline. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt; - A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's width.</li> </ul> |
|            | margin-bottom | <p>Specifies the position of the bottom of the containing block of the shape relative to the shape anchor. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt;- A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's height.</li> </ul>                                                                                         |
|            | margin-left   | <p>Specifies the position of the left of the containing block of the shape relative to the shape anchor. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt;- A number with an absolute units designator (cm,</li> </ul>                                                                                                                                                                                                                                                                                                          |

| Attributes | Description                      |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

|------------|-----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|            |                 | origin.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|            | mso-wrap-edited | Specifies whether the wrap coordinates were customized by the user. If the wrap coordinates are generated by an editor, this property is true; otherwise they were customized by a user. Default is false.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|            | mso-wrap-style  | <p>Specifies the wrapping mode for text in shapes in WordprocessingML documents. Default is square. Allowed values are:</p> <ul style="list-style-type: none"> <li>• square - Wraps text inside the shape in a square.</li> <li>• none - Text does not wrap.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|            | position        | <p>Specifies the kind of positioning used to place an element. Default is static. When the element is contained inside a group, this property shall be absolute. Allowed values are:</p> <ul style="list-style-type: none"> <li>• static - The element is positioned according to the normal flow of the page. The top and left properties are ignored. If the object is anchored inline, this value is used.</li> <li>• absolute - The element is positioned relative to the parent, using the top and left properties.</li> <li>• relative - The element is positioned according to the normal flow of the page, but the top and left properties are used. The overlap of overlapping elements is governed by the z-index property.</li> </ul>            |
|            | rotation        | Specifies the angle that a shape is rotated, in degrees. Default is 0. Positive angles are clockwise.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|            | top             | <p>Specifies the position of the top of the containing block of the shape relative to the element above it in the flow of the page. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. This property shall not be used for shapes anchored inline. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt;- A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's height.</li> </ul> |
|            | visibility      | Specifies whether a shape is displayed. Only inherit and hidden are used; any other values are mapped to inherit. Default is inherit. Allowed values are:                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |

| Attributes                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        | Description                                                                                                                                                                                                                                                                                                              |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |          |             |           |                                                                                                                                                                                                                                                                                                                          |             |                                                                                                                                                                                                                                                      |

Allowed values are:</p> <ul style="list-style-type: none"><li>ltr - Text is displayed left-to-right.</li><li>rtl - Text is displayed right-to-left.</li></ul> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |          |             |           |                                                                                                                                                                                                                                                                                                                          |             |                                                                                                                                                                                                                                                      |
| layout-flow                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       | <p>Determines the flow of the text layout in a textbox. Default is horizontal. Allowed values are:</p> <ul style="list-style-type: none"><li>horizontal - Text is displayed horizontally.</li><li>vertical - Text is displayed vertically.</li></ul>                                                                     |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |          |             |           |                                                                                                                                                                                                                                                                                                                          |             |                                                                                                                                                                                                                                                      |

| Attributes | Description           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|------------|-----------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|            |                       | <ul style="list-style-type: none"> <li>vertical-ideographic - Ideographic text is displayed vertically.</li> <li>horizontal-ideographic - Ideographic text is displayed horizontally.</li> </ul>                                                                                                                                                                                                                                                                                 |
|            | mso-direction-alt     | Specifies an alternate direction for text in textboxes. Overrides the direction property. The only allowed value is context.                                                                                                                                                                                                                                                                                                                                                     |
|            | mso-fit-shape-to-text | Specifies whether the shape stretches to fit the text in the textbox. Default is false.                                                                                                                                                                                                                                                                                                                                                                                          |
|            | mso-fit-text-to-shape | Specifies whether the text stretches to fit the textbox. Default is false.                                                                                                                                                                                                                                                                                                                                                                                                       |
|            | mso-layout-flow-alt   | Specifies the alternate layout flow for text in textboxes. This property is used instead of layout-flow when the layout flow is from bottom to top for non-ideographic languages. Its only value is bottom-to-top.                                                                                                                                                                                                                                                               |
|            | mso-next-textbox      | Specifies the ID of the next textbox in a series. Used to keep track of a set of linked textboxes. Default is no value.                                                                                                                                                                                                                                                                                                                                                          |
|            | mso-rotate            | <p>Specifies a specific rotation value for text in a textbox. Default is 0. Allowed values are:</p> <ul style="list-style-type: none"> <li>0</li> <li>90</li> <li>180</li> <li>-90</li> </ul>                                                                                                                                                                                                                                                                                    |
|            | mso-text-scale        | Specifies the scaling factor for fitting text to shapes. Default is 0. This property is only used if mso-fit-text-to-shape is true.                                                                                                                                                                                                                                                                                                                                              |
|            | v-text-anchor         | <p>Specifies the vertical anchoring of text in a textbox. Default is top. The alignment of a text anchor only becomes evident if mso-fit-text-to-shape is false. This property is different from the vertical-align CSS property, which is used for ideographic languages. Allowed values are:</p> <ul style="list-style-type: none"> <li>top</li> <li>middle</li> <li>bottom</li> <li>top-center</li> <li>middle-center</li> <li>bottom-center</li> <li>top-baseline</li> </ul> |

| Attributes | Description                                                                  |                                                                                                                                                                                                                                                                                                                                                             |       |             |        |                      |         |     |     |

|            |                                                                              | <ul style="list-style-type: none"><li>bottom-baseline</li><li>top-center-baseline</li><li>bottom-center-baseline</li></ul>                                                                                                                                                                                                                                  |       |             |        |                      |         |     |     |
|            | The following properties are only used by the textpath element (§19.1.2.23): |                                                                                                                                                                                                                                                                                                                                                             |       |             |        |                      |         |     |     |
|            | Property                                                                     | Description                                                                                                                                                                                                                                                                                                                                                 |       |             |        |                      |         |     |     |
|            | font                                                                         | Specifies a compound value of font settings. Default is no value. The values are the same as those of the CSS font property. The order of definitions in the string is: font-style, font-variant, font-weight, font-size, line-height, font-family.                                                                                                         |       |             |        |                      |         |     |     |
|            | font-family                                                                  | Specifies the family of the font. Default is no value. The values are the same as those of the CSS font-family property.                                                                                                                                                                                                                                    |       |             |        |                      |         |     |     |
|            | font-size                                                                    | Specifies the size of the font. Default is no value. The font size is defined in points. The values are the same as those of the CSS font-size property.                                                                                                                                                                                                    |       |             |        |                      |         |     |     |
|            | font-style                                                                   | Specifies the amount of slant for a font. Default is normal. The values are the same as those of the CSS font-style property. Allowed values are: <ul style="list-style-type: none"><li>normal</li><li>italic</li><li>oblique - Treated the same as italic.</li></ul>                                                                                       |       |             |        |                      |         |     |     |
|            | font-variant                                                                 | Specifies the variant style of a font. Default is normal. The values are the same as those of the CSS font-variant property. Allowed values are: <ul style="list-style-type: none"><li>normal</li><li>small-caps</li></ul>                                                                                                                                  |       |             |        |                      |         |     |     |
|            | font-weight                                                                  | Specifies the thickness of the letters of the font. Default is normal. The values are the same as those of the CSS font-weight property. Allowed values are: <table><tr><th>Value</th><th>Description</th></tr><tr><td>normal</td><td rowspan="4">Treated as non-bold.</td></tr><tr><td>lighter</td></tr><tr><td>100</td></tr><tr><td>200</td></tr></table> | Value | Description | normal | Treated as non-bold. | lighter | 100 | 200 |
|            | Value                                                                        | Description                                                                                                                                                                                                                                                                                                                                                 |       |             |        |                      |         |     |     |
| normal     | Treated as non-bold.                                                         |                                                                                                                                                                                                                                                                                                                                                             |       |             |        |                      |         |     |     |

|            |                       | <div>bold</div> <div>bolder</div> <div>500</div> <div>600</div> <div>700</div> <div>800</div> <div>900</div> <div>Treated as bold.</div>                                                                                                                                                                                                          |
|            | mso-text-shadow       | Specifies whether a shadow is applied to the text on a text path. Default is false.                                                                                                                                                                                                                                                               |
|            | text-decoration       | <p>Specifies the style of text decoration. Default is none. The values are the same as those of the CSS text-decoration property. Allowed values are:</p> <ul style="list-style-type: none"> <li>• none</li> <li>• underline</li> <li>• overline</li> <li>• line-through</li> <li>• blink</li> </ul>                                              |
|            | v-rotate-letters      | Specifies whether the letters of the text are rotated counterclockwise by 90 degrees. Default is false.                                                                                                                                                                                                                                           |
|            | v-same-letter-heights | Specifies whether all letters are the same height regardless of initial case. If true, the lowercase letters are stretched to the height of the uppercase letters. Default is false.                                                                                                                                                              |
|            | v-text-align          | <p>Specifies the alignment of text. Default is left. Allowed values are:</p> <ul style="list-style-type: none"> <li>• left</li> <li>• right</li> <li>• center</li> <li>• justify</li> <li>• letter-justify - Distributes the extra space between the letters.</li> <li>• stretch-justify - Stretches the letters to fill in the space.</li> </ul> |

| Attributes                        | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |                                                                                                                                                                                                                                                                                                                                                                              |

| userhidden (Hide Script Anchors)<br><br>Namespace:<br>urn:schemas-microsoft-com:office:office | <p>Specifies whether a script anchor is hidden. Default is <code>false</code>. If <code>true</code>, script anchors stay hidden even if the shape is otherwise visible. A script anchor is the visual representation of a script that when displayed in an application.</p> <p>[Example:</p> <pre>&lt;v:shape ... o:userhidden="true" ... &gt; &lt;/v:shape&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p>                                                                                          |
| wrapcoords (Shape Bounding Polygon)                                                           | <p>Specifies the bounding polygon that surrounds a shape. This is specified using a comma-delimited list of x and y coordinates: "x1,y1,x2,y2,x3,y3,..." This is used when text is tightly wrapped around a shape. Default is no value until the <code>mso-wrap-mode</code> style attribute is set to <code>tight</code> or <code>through</code>.</p> <p>[Example:</p> <pre>&lt;v:shape ...   wrapcoords="0,0 0,200, 200,200, 200,0" ... &gt; &lt;/v:shape&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p> |

[Note: The W3C XML Schema definition of this element's content model ([CT\\_Shapetype](#)) is located in §A.6.1. *end note]*

#### 19.1.2.21 stroke (Line Stroke Settings)

This element describes how to draw the path if something beyond solid line with a solid color is desired. The attributes of the stroke element can be used to describe a powerful set of stroke properties. Extensions to the VML stroke definition are encoded as sub-elements of stroke.

[Example:

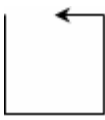

```
<v:polyline points="0pt,0pt,50pt,0pt,50pt,35pt,15pt,35pt,
15pt,15pt,75pt,15pt">
  <v:stroke startarrow="classic" endarrow="classic"
    startarrowwidth="wide" endarrowwidth="wide" dashstyle="dashdot"
    weight="2pt" color="teal" linestyle="thinThin"/>
</v:polyline>
```

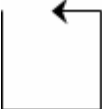

end example]

| Attributes                                                                                              | Description                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|---------------------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>althref</b> (Alternate Image Reference)<br><br>Namespace:<br>urn:schemas-microsoft-com:office:office | Specifies an alternate reference for an image in Macintosh PICT format.<br><br>[Example:<br><pre>&lt;v:stroke ... althref="myimage.pcz" ... &gt; &lt;/v:stroke&gt;</pre> <i>end example]</i><br><br>The possible values for this attribute are defined by the W3C XML Schema string datatype.                                                                                                                                                    |
| <b>color</b> (Stroke Color)                                                                             | Specifies the stroke color. Overrides the strokecolor attribute of a shape. Default is black. See the fillcolor attribute for a list of supported named colors.<br><br>[Example: The shape stroke is blue:<br><pre>&lt;v:shape ... strokecolor="red" ... &gt;   &lt;v:stroke color="blue"/&gt; &lt;/v:shape&gt;</pre> <i>end example]</i><br><br>The possible values for this attribute are defined by the ST_ColorType simple type (§20.1.2.3). |
| <b>color2</b> (Stroke Alternate Pattern Color)                                                          | Specifies a second color for strokes, used when filltype is pattern. Default is no value.<br><br>When a pattern fill is used for the stroke, the stroke color is used in colored parts of the source image. The color2 defines an alternate color to use in place of black in the source image.                                                                                                                                                  |

| Attributes                      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|---------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                 | <p>[<i>Example</i>: This unusual example is intended to demonstrate how the image and colors interact to create a patterned stroke. The yellow background shows transparency. The non-square shape and square image create an effective offset. The heavy stroke weight shows more of the image. The green shape fill shows how the stroke is overlaid on the shape.</p> <pre>&lt;v:background fillcolor="yellow"/&gt; &lt;v:shape style="width:60;height:50"   strokecolor="red" fillcolor="lime"   path="m 0,0 l 0,1000 1000,1000 1000,0 x e"&gt;   &lt;v:stroke filltype="pattern" weight="10pt"     src="myimage.gif" color2="blue"/&gt; &lt;/v:shape&gt;</pre>  <p>, where myimage.gif is:</p> <p><i>end example</i>]</p> <p>The possible values for this attribute are defined by the ST_ColorType simple type (§20.1.2.3).</p>                                                                                                    |
| dashstyle (Stroke Dash Pattern) | <p>Specifies the dot and dash pattern for a stroke. Default is solid. Pre-defined values are:</p> <ul style="list-style-type: none"> <li>• solid</li> <li>• shortdash</li> <li>• shortdot</li> <li>• shortdashdot</li> <li>• shortdashdotdot</li> <li>• dot</li> <li>• dash</li> <li>• longdash</li> <li>• dashdot</li> <li>• longdashdot</li> <li>• longdashdotdot</li> </ul> <p>A custom-defined dash pattern can also be specified using a series of numbers. These define the length of the dash (the drawn part of the stroke) and the length of the space between the dashes. The lengths are relative to the line width: a length of 1 is equal to the line width. The endcap style is applied to each dash but the arrow style is not. The string defines the length of the dash then the length of the space. This can be repeated to form complex dash styles. The string should always contain a pair of numbers; if it contains an odd number of numbers the last is disregarded. 0 implies a dot that is</p> |

| Attributes                    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          |
|-------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                               | <p>fourfold symmetrical (with round end caps, this is a circle).</p> <p>[Example:</p> <pre data-bbox="451 390 1062 489">&lt;v:stroke dashstyle="0 2" weight="3pt"   endcap="round"&gt; &lt;/v:stroke&gt;</pre>  <pre data-bbox="451 674 1029 772">&lt;v:stroke dashstyle="longdashdotdot"   weight="2pt"&gt; &lt;/v:stroke&gt;</pre>  <p>end example]</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                         |
| endarrow (Line End Arrowhead) | <p>Specifies an arrowhead for the end of a line. Default is none. The path shall not be closed with the x command for the arrowhead to show. Allowed values are:</p> <ul data-bbox="461 1213 613 1434" style="list-style-type: none"> <li>• none</li> <li>• block</li> <li>• classic</li> <li>• diamond</li> <li>• oval</li> <li>• open</li> </ul> <p>[Example:</p> <pre data-bbox="451 1570 932 1602">&lt;v:stroke endarrow="classic"/&gt;</pre>  <p>end example]</p> <p>The possible values for this attribute are defined by the ST_StrokeArrowType simple</p> |

| Attributes                                            | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|-------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <p>endarrowlength<br/>(Line End Arrowhead Length)</p> | <p>type (§19.1.3.8).</p> <p>Specifies the length of the arrowhead at the end of a line. Default is medium. Allowed values are:</p> <ul style="list-style-type: none"> <li>• short</li> <li>• medium</li> <li>• long</li> </ul> <p>[Example:</p> <pre>&lt;v:stroke ... endarrowlength="long" ... /&gt;</pre>  <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_StrokeArrowLength simple type (§19.1.3.7).</p> |
| <p>endarrowwidth<br/>(Line End Arrowhead Width)</p>   | <p>Specifies the width of the arrowhead at the end of a line. Default is medium. [Note: The W3C XML Schema definition of this element's content model ([CT\\_Stroke](#)) is located in §A.6.1. end note]

#### 19.1.2.22 [textbox \(Text Box\)](#)

This element is used to define text that appears inside the shape. This text can contain rich formatting and is rendered to fit inside the textboxrect defined by the path element (§19.1.2.14).

[Example:

```
<v:shape style="width=200;height=200" coordsize="400,400"
  fillcolor="yellow" strokecolor="maroon"
```

```
path="m 119,0 l 148,86 238,86 166,140 192,226 119,175 46,226
72,140 0,86 90,86 x e">
<v:textbox inset="32pt,35pt,, ">VML</v:textbox>
</v:shape>
```

*end example]*

| Attributes             | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| id (Unique Identifier) | <p>Specifies a unique identifier that can be used to reference a VML object.</p> <p>Default is no value.</p> <p>[Example:</p> <pre>&lt;v:shape ... id="myShape" ... &gt; &lt;/v:shape&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                                                                                                                                                                                                                                                                                                                       |
| inset (Text Box Inset) | <p>Specifies inner margin values for textbox text. Default is "0.1in, 0.05in, 0.1in, 0.05in". Missing values are set to the default. This is used if insetmode is custom.</p> <p>The internal text margin value is specified as a string containing four values, each separated by commas or spaces. The values measure inset from the left, top, right, and bottom edges of the box specified by the textboxrect attribute of the path element (§19.1.2.14).</p> <p>[Example: The text is set toward the lower right of a small square:</p> <pre>&lt;v:textbox inset="20pt,30pt,10pt,10pt"&gt;   VML&lt;/v:textbox&gt;</pre>  |

| Attributes                                                                                                                | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |          |             |      |                                                                                                                                                                                                                   |

|            | distance-top    | wraps around it. Default is 0 pt. This property is different from the CSS margin property, which changes the origin of the shape to include the margin areas. This property does not change the origin.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|            | mso-wrap-edited | Specifies whether the wrap coordinates were customized by the user. If the wrap coordinates are generated by an editor, this property is true; otherwise they were customized by a user. Default is false.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  |
|            | mso-wrap-style  | <p>Specifies the wrapping mode for text in shapes in WordprocessingML documents. Default is square. Allowed values are:</p> <ul style="list-style-type: none"> <li>• square - Wraps text inside the shape in a square.</li> <li>• none - Text does not wrap.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|            | position        | <p>Specifies the kind of positioning used to place an element. Default is static. When the element is contained inside a group, this property shall be absolute. Allowed values are:</p> <ul style="list-style-type: none"> <li>• static - The element is positioned according to the normal flow of the page. The top and left properties are ignored. If the object is anchored inline, this value is used.</li> <li>• absolute - The element is positioned relative to the parent, using the top and left properties.</li> <li>• relative - The element is positioned according to the normal flow of the page, but the top and left properties are used. The overlap of overlapping elements is governed by the z-index property.</li> </ul>            |
|            | rotation        | Specifies the angle that a shape is rotated, in degrees. Default is 0. Positive angles are clockwise.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|            | top             | <p>Specifies the position of the top of the containing block of the shape relative to the element above it in the flow of the page. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. This property shall not be used for shapes anchored inline. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt;- A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's height.</li> </ul> |

|            | <code>mso-direction-alt</code>     | Specifies an alternate direction for text in textboxes. Overrides the <code>direction</code> property. The only allowed value is <code>context</code> .                                                                                                                                                                                                                                                                                                                                                                      |
|            | <code>mso-fit-shape-to-text</code> | Specifies whether the shape stretches to fit the text in the textbox. Default is <code>false</code> .                                                                                                                                                                                                                                                                                                                                                                                                                        |
|            | <code>mso-fit-text-to-shape</code> | Specifies whether the text stretches to fit the textbox. Default is <code>false</code> .                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|            | <code>mso-layout-flow-alt</code>   | Specifies the alternate layout flow for text in textboxes. This property is used instead of <code>layout-flow</code> when the layout flow is from bottom to top for non-ideographic languages. Its only value is <code>bottom-to-top</code> .                                                                                                                                                                                                                                                                                |
|            | <code>mso-next-textbox</code>      | Specifies the ID of the next textbox in a series. Used to keep track of a set of linked textboxes. Default is no value.                                                                                                                                                                                                                                                                                                                                                                                                      |
|            | <code>mso-rotate</code>            | <p>Specifies a specific rotation value for text in a textbox. Default is 0. Allowed values are:</p> <ul style="list-style-type: none"> <li>• 0</li> <li>• 90</li> <li>• 180</li> <li>• -90</li> </ul>                                                                                                                                                                                                                                                                                                                        |
|            | <code>mso-text-scale</code>        | Specifies the scaling factor for fitting text to shapes. Default is 0. This property is only used if <code>mso-fit-text-to-shape</code> is <code>true</code> .                                                                                                                                                                                                                                                                                                                                                               |
|            | <code>v-text-anchor</code>         | <p>Specifies the vertical anchoring of text in a textbox. Default is <code>top</code>. The alignment of a text anchor only becomes evident if <code>mso-fit-text-to-shape</code> is <code>false</code>. This property is different from the <code>vertical-align</code> CSS property, which is used for ideographic languages. Allowed values are:</p> <ul style="list-style-type: none"> <li>• <code>top</code></li> <li>• <code>middle</code></li> <li>• <code>bottom</code></li> <li>• <code>top-center</code></li> </ul> |

| Attributes | Description                                                                  |                                                                                                                                                                                                                                                                                                                |       |             |        |                      |         |  |
|------------|------------------------------------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-------|-------------|--------|----------------------|---------|--|
|            |                                                                              | <ul style="list-style-type: none"><li>• middle-center</li><li>• bottom-center</li><li>• top-baseline</li><li>• bottom-baseline</li><li>• top-center-baseline</li><li>• bottom-center-baseline</li></ul>                                                                                                        |       |             |        |                      |         |  |
|            | The following properties are only used by the textpath element (§19.1.2.23): |                                                                                                                                                                                                                                                                                                                |       |             |        |                      |         |  |
|            | Property                                                                     | Description                                                                                                                                                                                                                                                                                                    |       |             |        |                      |         |  |
|            | font                                                                         | Specifies a compound value of font settings. Default is no value. The values are the same as those of the CSS font property. The order of definitions in the string is: font-style, font-variant, font-weight, font-size, line-height, font-family.                                                            |       |             |        |                      |         |  |
|            | font-family                                                                  | Specifies the family of the font. Default is no value. The values are the same as those of the CSS font-family property.                                                                                                                                                                                       |       |             |        |                      |         |  |
|            | font-size                                                                    | Specifies the size of the font. Default is no value. The font size is defined in points. The values are the same as those of the CSS font-size property.                                                                                                                                                       |       |             |        |                      |         |  |
|            | font-style                                                                   | Specifies the amount of slant for a font. Default is normal. The values are the same as those of the CSS font-style property. Allowed values are: <ul style="list-style-type: none"><li>• normal</li><li>• italic</li><li>• oblique - Treated the same as italic.</li></ul>                                    |       |             |        |                      |         |  |
|            | font-variant                                                                 | Specifies the variant style of a font. Default is normal. The values are the same as those of the CSS font-variant property. Allowed values are: <ul style="list-style-type: none"><li>• normal</li><li>• small-caps</li></ul>                                                                                 |       |             |        |                      |         |  |
|            | font-weight                                                                  | Specifies the thickness of the letters of the font. Default is normal. The values are the same as those of the CSS font-weight property. Allowed values are: <table><tr><th>Value</th><th>Description</th></tr><tr><td>normal</td><td>Treated as non-bold.</td></tr><tr><td>lighter</td><td></td></tr></table> | Value | Description | normal | Treated as non-bold. | lighter |  |
|            | Value                                                                        | Description                                                                                                                                                                                                                                                                                                    |       |             |        |                      |         |  |
| normal     | Treated as non-bold.                                                         |                                                                                                                                                                                                                                                                                                                |       |             |        |                      |         |  |
| lighter    |                                                                              |                                                                                                                                                                                                                                                                                                                |       |             |        |                      |         |  |

|            | mso-text-shadow       | Specifies whether a shadow is applied to the text on a text path. Default is false.                                                                                                                                                                                                           |
|            | text-decoration       | Specifies the style of text decoration. Default is none. The values are the same as those of the CSS text-decoration property. Allowed values are: <ul style="list-style-type: none"> <li>• none</li> <li>• underline</li> <li>• overline</li> <li>• line-through</li> <li>• blink</li> </ul> |
|            | v-rotate-letters      | Specifies whether the letters of the text are rotated counterclockwise by 90 degrees. Default is false.                                                                                                                                                                                       |
|            | v-same-letter-heights | Specifies whether all letters are the same height regardless of initial case. If true, the lowercase letters are stretched to the height of the uppercase letters. Default is false.                                                                                                          |
|            | v-text-align          | Specifies the alignment of text. Default is left. Allowed values are: <ul style="list-style-type: none"> <li>• left</li> <li>• right</li> <li>• center</li> <li>• justify</li> <li>• letter-justify - Distributes the extra space between</li> </ul>                                          |

Default is tightening. This property determines whether space is removed between each letter (tightening) or added between each letter (tracking). The amount of letter spacing change is defined by the v-text-spacing property. Allowed values are:</p> <ul style="list-style-type: none"> <li>tightening</li> <li>tracking</li> </ul> |
|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   | <p>v-text-spacing</p> <p>Specifies the amount of spacing for text in 100ths of single line spacing. Default is 100.</p>                                                                                                                                                                                                                                                                                       |
| <p>The line (§19.1.2.12), polyline (§19.1.2.15) and curve (§19.1.2.3) elements ignore the following properties:</p> <ul style="list-style-type: none"> <li>top</li> <li>left</li> <li>width</li> <li>height</li> </ul> <p>The following properties are not inherited by an element that references a shapetype element (§19.1.2.20) via the id attribute:</p> <ul style="list-style-type: none"> <li>flip</li> <li>height</li> <li>left</li> <li>margin-left</li> <li>margin-top</li> <li>position</li> <li>rotation</li> <li>top</li> <li>visibility</li> <li>width</li> <li>z-index</li> </ul> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p> |                                                                                                                                                                                                                                                                                                                                                                                                               |

[Note: The W3C XML Schema definition of this element’s content model ([CT Textbox](#)) is located in §A.6.1. *end note*]

19.1.2.23 **textpath (Text Layout Path)**

This element is used to define a vector path based on the text data, font and font styles supplied. The path which results is then mapped into the region defined by the *v* attribute of the shape's path (§19.1.2.14).

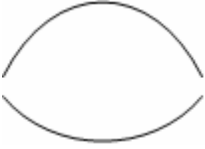

[Example:

```
<v:curve from="50,100" to="400,100"
  control1="200,200" control2="300,200">
  <v:stroke color="blue"/>
  <v:fill color="yellow" color2="green" type="gradient"/>
  <v:path textpathok="true"/>
  <v:textpath on="true" style="font:normal normal normal 36pt Arial"
    fitpath="true" string="Hello, VML!"/>
</v:curve>
```

*end example*]

|            |                                  | parent object's width.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|            | margin-right                     | <p>Specifies the position of the right of the containing block of the shape relative to the shape anchor. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt; - A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's width.</li> </ul> |
|            | margin-top                       | <p>Specifies the position of the top of the containing block of the shape relative to the shape anchor. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt;- A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's height.</li> </ul>   |
|            | mso-position-horizontal          | <p>Specifies the horizontal positioning data for objects in WordprocessingML documents. Default is absolute. Allowed values are:</p> <ul style="list-style-type: none"> <li>• absolute</li> <li>• left</li> <li>• center</li> <li>• right</li> <li>• inside</li> <li>• outside</li> </ul>                                                                                                                                                                                                                                                                                                                                                                             |
|            | mso-position-horizontal-relative | <p>Specifies relative horizontal position data for objects in WordprocessingML documents. This modifies the mso-position-horizontal property. Default is text. Allowed values are:</p> <ul style="list-style-type: none"> <li>• margin</li> <li>• page</li> <li>• text</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                     |

| Attributes | Description                    |                                                                                                                                                                                                                                                                                               |
|------------|--------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|            |                                | <ul style="list-style-type: none"> <li>• char</li> </ul>                                                                                                                                                                                                                                      |
|            | mso-position-vertical          | <p>Specifies the vertical positioning data for objects in WordprocessingML documents. Default is absolute. Allowed values are:</p> <ul style="list-style-type: none"> <li>• absolute</li> <li>• top</li> <li>• center</li> <li>• bottom</li> <li>• inside</li> <li>• outside</li> </ul>       |
|            | mso-position-vertical-relative | <p>Specifies relative vertical position data for objects in WordprocessingML documents. This modifies the mso-position-vertical property. Default is text. Allowed values are:</p> <ul style="list-style-type: none"> <li>• margin</li> <li>• page</li> <li>• text</li> <li>• line</li> </ul> |
|            | mso-wrap-distance-bottom       | <p>Specifies the distance from the bottom of the shape to the text that wraps around it. Default is 0 pt. This property is different from the CSS margin property, which changes the origin of the shape to include the margin areas. This property does not change the origin.</p>           |
|            | mso-wrap-distance-left         | <p>Specifies the distance from the left side of the shape to the text that wraps around it. Default is 0 pt. This property is different from the CSS margin property, which changes the origin of the shape to include the margin areas. This property does not change the origin.</p>        |
|            | mso-wrap-distance-right        | <p>Specifies the distance from the right side of the shape to the text that wraps around it. Default is 0 pt. This property is different from the CSS margin property, which changes the origin of the shape to include the margin areas. This property does not change the origin.</p>       |
|            | mso-wrap-distance-top          | <p>Specifies the distance from the top of the shape to the text that wraps around it. Default is 0 pt. This property is different from the CSS margin property, which changes the origin of the shape to include the margin areas. This property does not change the origin.</p>              |
|            | mso-wrap-                      | <p>Specifies whether the wrap coordinates were customized by the user. If the wrap coordinates are generated by an editor, this</p>                                                                                                                                                           |

| Attributes | Description    |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|------------|----------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|            | edited         | property is true; otherwise they were customized by a user. Default is false.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|            | mso-wrap-style | <p>Specifies the wrapping mode for text in shapes in WordprocessingML documents. Default is square. Allowed values are:</p> <ul style="list-style-type: none"> <li>• square - Wraps text inside the shape in a square.</li> <li>• none - Text does not wrap.</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|            | position       | <p>Specifies the kind of positioning used to place an element. Default is static. When the element is contained inside a group, this property shall be absolute. Allowed values are:</p> <ul style="list-style-type: none"> <li>• static - The element is positioned according to the normal flow of the page. The top and left properties are ignored. If the object is anchored inline, this value is used.</li> <li>• absolute - The element is positioned relative to the parent, using the top and left properties.</li> <li>• relative - The element is positioned according to the normal flow of the page, but the top and left properties are used. The overlap of overlapping elements is governed by the z-index property.</li> </ul>            |
|            | rotation       | Specifies the angle that a shape is rotated, in degrees. Default is 0. Positive angles are clockwise.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|            | top            | <p>Specifies the position of the top of the containing block of the shape relative to the element above it in the flow of the page. Default is 0. It is specified in CSS units or, for elements in a group, in the coordinate system of the parent element. This property shall not be used for shapes anchored inline. Allowed values are:</p> <ul style="list-style-type: none"> <li>• auto - Default position of an element in the flow of the page.</li> <li>• &lt;units&gt;- A number with an absolute units designator (cm, mm, in, pt, pc, or px) or a relative units designator (em or ex). If no units are given, pixels (px) is assumed.</li> <li>• &lt;percentage&gt;- Value expressed as a percentage of the parent object's height.</li> </ul> |
|            | visibility     | <p>Specifies whether a shape is displayed. Only inherit and hidden are used; any other values are mapped to inherit. Default is inherit. Allowed values are:</p> <ul style="list-style-type: none"> <li>• hidden - The shape is not visible, but is still part of the flow of the objects in the browser. Mouse events are not</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                   |

| Attributes                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |          |             |                        |                                                                                                                                                                                                                                                                                                                                                                                  |                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

Allowed values are:</p> <ul style="list-style-type: none"><li>• <code>horizontal</code> - Text is displayed horizontally.</li><li>• <code>vertical</code> - Text is displayed vertically.</li><li>• <code>vertical-ideographic</code> - Ideographic text is displayed vertically.</li><li>• <code>horizontal-ideographic</code> - Ideographic text is displayed</li></ul> |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |          |             |                        |                                                                                                                                                                                                                                                                                                                                                                                  |                          |                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| Attributes | Description           |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|------------|-----------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|            |                       | horizontally.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|            | mso-direction-alt     | Specifies an alternate direction for text in textboxes. Overrides the direction property. The only allowed value is context.                                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|            | mso-fit-shape-to-text | Specifies whether the shape stretches to fit the text in the textbox. Default is false.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|            | mso-fit-text-to-shape | Specifies whether the text stretches to fit the textbox. Default is false.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |
|            | mso-layout-flow-alt   | Specifies the alternate layout flow for text in textboxes. This property is used instead of layout-flow when the layout flow is from bottom to top for non-ideographic languages. Its only value is bottom-to-top.                                                                                                                                                                                                                                                                                                                                                                         |
|            | mso-next-textbox      | Specifies the ID of the next textbox in a series. Used to keep track of a set of linked textboxes. Default is no value.                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|            | mso-rotate            | <p>Specifies a specific rotation value for text in a textbox. Default is 0. Allowed values are:</p> <ul style="list-style-type: none"> <li>• 0</li> <li>• 90</li> <li>• 180</li> <li>• -90</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                      |
|            | mso-text-scale        | Specifies the scaling factor for fitting text to shapes. Default is 0. This property is only used if mso-fit-text-to-shape is true.                                                                                                                                                                                                                                                                                                                                                                                                                                                        |
|            | v-text-anchor         | <p>Specifies the vertical anchoring of text in a textbox. Default is top. The alignment of a text anchor only becomes evident if mso-fit-text-to-shape is false. This property is different from the vertical-align CSS property, which is used for ideographic languages. Allowed values are:</p> <ul style="list-style-type: none"> <li>• top</li> <li>• middle</li> <li>• bottom</li> <li>• top-center</li> <li>• middle-center</li> <li>• bottom-center</li> <li>• top-baseline</li> <li>• bottom-baseline</li> <li>• top-center-baseline</li> <li>• bottom-center-baseline</li> </ul> |

| Attributes                                    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |          |             |                                               |                                                                                                                                                                                                                                                     |             |                                                                                                                          |           |                                                                                                                                                          |            |                                                                                                                                                                                                                                                                                                                                                   |              |                                                                                                                                                                                                                                                                                                       |             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |       |             |                                               |                      |      |                  |

| Property                                      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |          |             |                                               |                                                                                                                                                                                                                                                     |             |                                                                                                                          |           |                                                                                                                                                          |            |                                                                                                                                                                                                                                                                                                                                                   |              |                                                                                                                                                                                                                                                                                                       |             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |       |             |                                               |                      |      |                  |
| font                                          | Specifies a compound value of font settings. Default is no value. The values are the same as those of the CSS font property. The order of definitions in the string is: font-style, font-variant, font-weight, font-size, line-height, font-family.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |          |             |                                               |                                                                                                                                                                                                                                                     |             |                                                                                                                          |           |                                                                                                                                                          |            |                                                                                                                                                                                                                                                                                                                                                   |              |                                                                                                                                                                                                                                                                                                       |             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |       |             |                                               |                      |      |                  |
| font-family                                   | Specifies the family of the font. Default is no value. The values are the same as those of the CSS font-family property.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |          |             |                                               |                                                                                                                                                                                                                                                     |             |                                                                                                                          |           |                                                                                                                                                          |            |                                                                                                                                                                                                                                                                                                                                                   |              |                                                                                                                                                                                                                                                                                                       |             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |       |             |                                               |                      |      |                  |
| font-size                                     | Specifies the size of the font. Default is no value. The font size is defined in points. The values are the same as those of the CSS font-size property.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |          |             |                                               |                                                                                                                                                                                                                                                     |             |                                                                                                                          |           |                                                                                                                                                          |            |                                                                                                                                                                                                                                                                                                                                                   |              |                                                                                                                                                                                                                                                                                                       |             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |       |             |                                               |                      |      |                  |

| bold                                          | Treated as bold.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |          |             |                                               |                                                                                                                                                                                                                                                     |             |                                                                                                                          |           |                                                                                                                                                          |            |                                                                                                                                                                                                                                                                                                                                                   |              |                                                                                                                                                                                                                                                                                                       |             |                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |       |             |                                               |                      |      |                  |

| Attributes | Description           |                                                                                                                                                                                                                                                                                                                         |  |
|------------|-----------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|--|
|            |                       | <div><div>bolder</div><div>500</div><div>600</div><div>700</div><div>800</div><div>900</div></div>                                                                                                                                                                                                                      |  |
|            | mso-text-shadow       | Specifies whether a shadow is applied to the text on a text path. Default is false.                                                                                                                                                                                                                                     |  |
|            | text-decoration       | Specifies the style of text decoration. Default is none. The values are the same as those of the CSS text-decoration property. Allowed values are: <ul style="list-style-type: none"><li>none</li><li>underline</li><li>overline</li><li>line-through</li><li>blink</li></ul>                                           |  |
|            | v-rotate-letters      | Specifies whether the letters of the text are rotated counterclockwise by 90 degrees. Default is false.                                                                                                                                                                                                                 |  |
|            | v-same-letter-heights | Specifies whether all letters are the same height regardless of initial case. If true, the lowercase letters are stretched to the height of the uppercase letters. Default is false.                                                                                                                                    |  |
|            | v-text-align          | Specifies the alignment of text. Default is left. Allowed values are: <ul style="list-style-type: none"><li>left</li><li>right</li><li>center</li><li>justify</li><li>letter-justify - Distributes the extra space between the letters.</li><li>stretch-justify - Stretches the letters to fill in the space.</li></ul> |  |
|            | v-text-kern           | Specifies whether kerning is turned on. Default is false.                                                                                                                                                                                                                                                               |  |
|            | v-text-reverse        | Specifies whether the layout order of rows is reversed. Default is false. This is used for vertical text layout.                                                                                                                                                                                                        |  |

| Attributes                   | Description                                                                                                                                                                                                                                                                                                                                                                         |                                                                                                                                                                                                                                                                                                                                                                              |
|------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                              | v-text-spacing-mode                                                                                                                                                                                                                                                                                                                                                                 | Specifies the mode for letter spacing. Default is tightening. This property determines whether space is removed between each letter (tightening) or added between each letter (tracking). The amount of letter spacing change is defined by the v-text-spacing property. Allowed values are: <ul style="list-style-type: none"><li>• tightening</li><li>• tracking</li></ul> |
|                              | v-text-spacing                                                                                                                                                                                                                                                                                                                                                                      | Specifies the amount of spacing for text in 100ths of single line spacing. Default is 100.                                                                                                                                                                                                                                                                                   |
|                              | <p>The line (§19.1.2.12), polyline (§19.1.2.15) and curve (§19.1.2.3) elements ignore the following properties:</p> <ul style="list-style-type: none"><li>• top</li><li>• left</li><li>• width</li><li>• height</li></ul>                                                                                                                                                           |                                                                                                                                                                                                                                                                                                                                                                              |
|                              | <p>The following properties are not inherited by an element that references a shapetype element (§19.1.2.20) via the id attribute:</p> <ul style="list-style-type: none"><li>• flip</li><li>• height</li><li>• left</li><li>• margin-left</li><li>• margin-top</li><li>• position</li><li>• rotation</li><li>• top</li><li>• visibility</li><li>• width</li><li>• z-index</li></ul> |                                                                                                                                                                                                                                                                                                                                                                              |
|                              | <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                                                                                                                                                                                                                    |                                                                                                                                                                                                                                                                                                                                                                              |
| trim (Text Path Trim Toggle) | <p>Specifies whether extra space is removed above and below the text. If true, space reserved for ascenders and descenders is removed. Default is false.</p> <p>[Example: The shape path is duplicated as a second shape and overlaid on the textpath for illustrative purposes:</p> <pre>&lt;v:shape style=" width:100;height:100"   path="m 0,500 c 250,0 750,0 1000,500 e</pre>  |                                                                                                                                                                                                                                                                                                                                                                              |

| Attributes              | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|-------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                         | <pre> m 0,600 c 250,900 750,900 1000,600 e" fillcolor="yellow" strokecolor="maroon"&gt; &lt;v:path textpathok="true"/&gt; &lt;v:textpath on="true" fitshape="true" string="vml" trim="true"/&gt; &lt;/v:shape&gt; </pre>  <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p> |
| xscale (Text X-Scaling) | <p>Specifies whether a straight text path is used instead of the shape path. If true, the text runs along a path from left to right along the x value of the lower boundary of the shape. Default is false.</p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p>                                                                                                                                                                                                                                                                                                                                                                                                 |

[Note: The W3C XML Schema definition of this element's content model ([CT\\_TextPath](#)) is located in §A.6.1. *end note*]

### 19.1.3 Simple Types

The following additional simple type information in the urn:schemas-microsoft-com:vml namespace is used for documents of a transitional conformance class.

#### 19.1.3.1 ST\_EditAs (Shape Grouping Types)

This simple type specifies the different meanings of a group of shapes.

This simple type's contents are a restriction of the W3C XML Schema string datatype.

| Enumeration Value           | Description                                              |
|-----------------------------|----------------------------------------------------------|
| bullseye (Bullseye Diagram) | Specifies that the group represents a bulls-eye diagram. |

| Enumeration Value                     | Description                                                                   |
|---------------------------------------|-------------------------------------------------------------------------------|
| canvas (Shape Canvas)                 | Specifies that the group is a regular group and does not represent a diagram. |
| cycle (Cycle Diagram)                 | Specifies that the group represents a cycle diagram.                          |
| orgchart (Organization Chart Diagram) | Specifies that the group represents an organization chart.                    |
| radial (Radial Diagram)               | Specifies that the group represents a radial diagram.                         |
| stacked (Pyramid Diagram)             | Specifies that the group represents a pyramid diagram.                        |
| venn (Venn Diagram)                   | Specifies that the group represents a Venn diagram.                           |

[Note: The W3C XML Schema definition of this simple type's content model ([ST\\_EditAs](#)) is located in §A.6.1. *end note*]

### 19.1.3.2 ST\_Ext (VML Extension Handling Behaviors)

This simple type specifies VML extension handling behaviors.

This simple type's contents are a restriction of the W3C XML Schema string datatype.

| Enumeration Value               | Description                                                                                                                                                                                                     |
|---------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| backwardCompatible (Renderable) | Specifies that the VML entity may be rendered by ignoring the extension information. If edited, the extension information must be discarded.                                                                    |
| edit (Editable)                 | Specifies that the VML entity may be safely rendered and edited without invalidating the extension information.                                                                                                 |
| view (Not renderable)           | Specifies that the VML entity is not be renderable without understanding the extension information. If the extension information cannot be understood, the downlevel image should be used to render the object. |

[Note: The W3C XML Schema definition of this simple type's content model ([ST\\_Ext](#)) is located in §A.6.1. *end note*]

### 19.1.3.3 ST\_FillMethod (Gradient Fill Computation Type)

This simple type specifies ways in which a gradient fill is computed.

This simple type's contents are a restriction of the W3C XML Schema string datatype.

| Enumeration Value              | Description   |
|--------------------------------|---------------|
| any (Application Default Fill) | Default blend |

| Enumeration Value                | Description                                                                                             |
|----------------------------------|---------------------------------------------------------------------------------------------------------|
|                                  |                        |
| linear (Linear Fill)             | Linear blend<br>       |
| linear sigma (Linear Sigma Fill) | Linear sigma blend<br> |
| none (No Gradient Fill)          | No blend<br>           |
| sigma (Sigma Fill)               | Sigma blend<br>        |

[Note: The W3C XML Schema definition of this simple type's content model ([ST\\_FillMethod](#)) is located in §A.6.1. end note]

#### 19.1.3.4 ST\_FillType (Shape Fill Type)

This simple type specifies the types for fills applied to a shape.

This simple type's contents are a restriction of the W3C XML Schema string datatype.

| Enumeration Value                | Description                                                                                                                                                    |
|----------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------|
| frame (Stretch Image to Fit)     | The image is stretched to fill the shape.<br>                               |
| gradient (Linear Gradient)       | The fill colors blend together in a linear gradient from bottom to top.<br> |
| gradientRadial (Radial Gradient) | The fill colors blend together in a radial gradient.<br>                    |
| pattern (Image Pattern)          | The image is used to create a pattern using the fill                                                                                                           |

| Enumeration Value  | Description                                                                                                             |
|--------------------|-------------------------------------------------------------------------------------------------------------------------|
|                    | colors.<br>                            |
| solid (Solid Fill) | The fill pattern is a solid color.<br> |
| tile (Tiled Image) | The fill image is tiled.<br>           |

[Note: The W3C XML Schema definition of this simple type's content model ([ST\\_FillType](#)) is located in §A.6.1. end note]

#### 19.1.3.5 ST\_ImageAspect (Image Scaling Behavior)

This simple type specifies the scaling behaviors for an image applied to a stroke.

This simple type's contents are a restriction of the W3C XML Schema string datatype.

| Enumeration Value            | Description                                                                                                                   |
|------------------------------|-------------------------------------------------------------------------------------------------------------------------------|
| atLeast (At Least)           | Image is at least as big as imagesize.<br> |
| atMost (At Most)             | Image is no bigger than imagesize.<br>     |
| ignore (Ignore Aspect Ratio) | Ignore aspect issues.<br>                  |

[Note: The W3C XML Schema definition of this simple type's content model ([ST\\_ImageAspect](#)) is located in §A.6.1. end note]

#### 19.1.3.6 ST\_ShadowType (Shadow Type)

This simple type specifies the types of shadows applied to a shape.

This simple type's contents are a restriction of the W3C XML Schema string datatype.

| Enumeration Value                | Description                                                                          |
|----------------------------------|--------------------------------------------------------------------------------------|
| double (Double Shadow)           | Double shadow. color2 and offset2 are used for the second shadow's color and offset. |
| emboss (Embossed Shadow)         | The shadow has an embossed look. Similar to double.                                  |
| perspective (Perspective Shadow) | Perspective shadow.                                                                  |
| single (Single Shadow)           | Single shadow.                                                                       |

[Note: The W3C XML Schema definition of this simple type's content model ([ST\\_ShadowType](#)) is located in §A.6.1. *end note*]

### 19.1.3.7 [ST\\_StrokeArrowLength](#) (Stroke Arrowhead Length)

This simple type specifies the lengths of a stroke arrowhead.

This simple type's contents are a restriction of the W3C XML Schema string datatype.

| Enumeration Value         | Description                                                                                          |
|---------------------------|------------------------------------------------------------------------------------------------------|
| long (Long Arrowhead)     | Long length<br>   |
| medium (Medium Arrowhead) | Medium length<br> |
| short (Short Arrowhead)   | Short length<br>  |

[Note: The W3C XML Schema definition of this simple type's content model ([ST\\_StrokeArrowLength](#)) is located in §A.6.1. *end note*]

### 19.1.3.8 [ST\\_StrokeArrowType](#) (Stroke Arrowhead Type)

This simple type specifies the types of arrowhead for a stroke.

This simple type's contents are a restriction of the W3C XML Schema string datatype.

| Enumeration Value           | Description                                                                                                     |
|-----------------------------|-----------------------------------------------------------------------------------------------------------------|
| block (Block Arrowhead)     | Block arrowhead<br>          |
| classic (Classic Arrowhead) | Classic curved arrowhead<br> |
| diamond (Diamond Arrowhead) | Diamond arrowhead<br>        |

| Enumeration Value     | Description                                                                                          |
|-----------------------|------------------------------------------------------------------------------------------------------|
| none (No Arrowhead)   | No arrowhead<br>    |
| open (Open Arrowhead) | Open arrowhead<br>  |
| oval (Oval Arrowhead) | Round arrowhead<br> |

[Note: The W3C XML Schema definition of this simple type's content model ([ST\\_StrokeArrowType](#)) is located in §A.6.1. *end note*]

#### 19.1.3.9 ST\_StrokeArrowWidth (Stroke Arrowhead Width)

This simple type specifies the widths of a stroke arrowhead.

This simple type's contents are a restriction of the W3C XML Schema string datatype.

| Enumeration Value         | Description                                                                                         |
|---------------------------|-----------------------------------------------------------------------------------------------------|
| medium (Medium Arrowhead) | Medium width<br>   |
| narrow (Narrow Arrowhead) | Narrow width<br> |
| wide (Wide Arrowhead)     | Wide width<br>   |

[Note: The W3C XML Schema definition of this simple type's content model ([ST\\_StrokeArrowWidth](#)) is located in §A.6.1. *end note*]

#### 19.1.3.10 ST\_StrokeEndCap (Stroke End Cap Type)

This simple type specifies the styles for the end of a stroke.

This simple type's contents are a restriction of the W3C XML Schema string datatype.

| Enumeration Value | Description                                                                                     |
|-------------------|-------------------------------------------------------------------------------------------------|
| flat (Flat End)   | Flat end<br> |
| round (Round End) | Round end                                                                                       |

| Enumeration Value   | Description                                                                                     |
|---------------------|-------------------------------------------------------------------------------------------------|
|                     |                |
| square (Square End) | Square end<br> |

[Note: The W3C XML Schema definition of this simple type's content model ([ST\\_StrokeEndCap](#)) is located in §A.6.1. *end note*]

#### 19.1.3.11 ST\_StrokeJoinStyle (Line Join Type)

This simple type specifies the join styles for a polyline (§19.1.2.15).

This simple type's contents are a restriction of the W3C XML Schema string datatype.

| Enumeration Value   | Description                                                                                         |
|---------------------|-----------------------------------------------------------------------------------------------------|
| bevel (Bevel Joint) | Bevel joint<br> |
| miter (Miter Joint) | Miter joint<br> |
| round (Round Joint) | Round joint<br> |

[Note: The W3C XML Schema definition of this simple type's content model ([ST\\_StrokeJoinStyle](#)) is located in §A.6.1. *end note*]

#### 19.1.3.12 ST\_StrokeLineStyle (Stroke Line Style)

This simple type specifies the line styles for a stroke.

This simple type's contents are a restriction of the W3C XML Schema string datatype.

| Enumeration Value                                | Description                                                                                                        |
|--------------------------------------------------|--------------------------------------------------------------------------------------------------------------------|
| single (Single Line)                             | Single line<br>                   |
| thickBetweenThin (Thick Line Between Thin Lines) | Thick line between thin lines<br> |
| thickThin (Thick Line Outside Thin Line)         | Thick line outside thin line<br>  |
| thinThick (Thin Line Outside Thick Line)         | Thin line outside thick line<br>  |
| thinThin (Two Thin Lines)                        | Two thin lines<br>                |

[Note: The W3C XML Schema definition of this simple type's content model ([ST StrokeLineStyle](#)) is located in §A.6.1. *end note*]

## 19.2 VML - Office Drawing

It is possible to include graphical VML objects in Office Open XML documents. The elements describing the core graphical objects are defined in the VML namespace. Additional elements that describe certain advanced shape effects, metadata and relationships are defined in this namespace.

[Note: The VML format is a legacy format originally introduced with Office 2000 and is included and fully defined in ISO/IEC 29500 for backwards compatibility reasons. The DrawingML format is a newer and richer format created with the goal of eventually replacing any uses of VML in the Office Open XML formats. VML should be considered a transitional format included in Office Open XML for legacy reasons only and new applications that need a file format for drawings are strongly encouraged to use preferentially DrawingML. *end note*]

[Example: Assume the following shape exists in a document:

The basic speech bubble shape is defined using VML. The 3-D effect is defined using the extrusion element in this namespace. The specular attribute defines the subtle sharp reflection on the edge of the shape. The color attribute sets the extrusion to a different color than the face of the shape. The rotationangle attribute sets the shape's rotation about the X- and Y-axes. The lightposition and lightposition2 attributes set the positions of the light sources that illuminate the shape.

```
<o:extrusion v:ext="view" specularity="80000f" color="#c4bc96 [2414]" on="t"
rotationangle="-5,15" lightposition="0,-50000" lightposition2="0,50000"
type="perspective"/>
```

This element is a child of the primary shape definition:

```
<v:shape id="_x0000_s1030" type="#_x0000_t62"
style="position:absolute;left:0;text-align:left;margin-left:35.25pt;
margin-top:60pt;width:69pt;height:57pt;z-index:251658240" adj="1675,27171"
fillcolor="#ddd8c2 [2894]">
<o:extrusion ... />
</v:shape>
```

*end example]*

Throughout VML, numeric values that are allowed to take units can be specified in: cm (centimeters), mm (millimeters), in (inches), pt (points), pc (picas), px (pixels).

## 19.2.1 Table of Contents

**This subclause is informative.**

|               |                                                          |            |

| 19.2.3.23     | ST_ScreenSize (Screen Sizes Type) .....                             | 810        |

**End of informative text.**

## **19.2.2 Elements**

The following elements comprise the contents of the urn:schemas-microsoft-com:office:office namespace:

[*Note:* As the VML format is a format provided for backward compatibility, those VML elements defined in the same urn:schemas-microsoft-com:office:office namespace remain in that namespace as it is already used by millions of documents already using VML. *end note*]

### 19.2.2.1 bottom (Text Box Bottom Stroke)

This element specifies the stroke properties for the bottom border of a text box. It entirely supercedes its parent stroke element if its on attribute is true. Thus the default value of an unspecified attribute overrides a value specified in the parent. If the on attribute is false or not specified, the border is not shown.

[*Example:* The text box borders are set independently. Note that the bottom border does not inherit the weight from the parent stroke element.

```
<v:stroke weight="2.25pt">
  <o:left v:ext="view" dashstyle="1 1" color="blue" weight="5pt" on="t"/>
  <o:top v:ext="view" color="black" weight="2.25pt" on="t"/>
  <o:right v:ext="view" dashstyle="1 1" color="blue" weight="5pt" on="t"/>
  <o:bottom v:ext="view" color="black" on="t"/>
  <o:column v:ext="view" color="#f60" on="t"/>
</v:stroke>
```

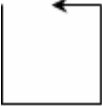

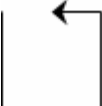

*end example]*

| Attributes                          | Description                                                                                                                                                                                                                                                                                                     |
|-------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| althref (Alternate Image Reference) | <p>Specifies an alternate reference for an image in Macintosh PICT format.</p> <p>[<i>Example:</i></p> <pre>&lt;v:stroke ... althref="myimage.pcz" ... &gt; &lt;/v:stroke&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p> |
| color (Stroke Color)                | <p>Specifies the stroke color. Overrides the strokecolor attribute of a shape. Default is black. See the fillcolor attribute for a list of supported named colors.</p> <p>[<i>Example:</i> The shape stroke is blue:</p>                                                                                        |

|                                                | <pre>&lt;v:shape ... strokecolor="red" ... &gt;   &lt;v:stroke color="blue"/&gt; &lt;/v:shape&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_ColorType simple type (§20.1.2.3).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <p>color2 (Stroke Alternate Pattern Color)</p> | <p>Specifies a second color for strokes, used when filltype is pattern. Default is no value.</p> <p>When a pattern fill is used for the stroke, the stroke color is used in colored parts of the source image. The color2 defines an alternate color to use in place of black in the source image.</p> <p>[<i>Example:</i> This unusual example is intended to demonstrate how the image and colors interact to create a patterned stroke. The yellow background shows transparency. The non-square shape and square image create an effective offset. The heavy stroke weight shows more of the image. The green shape fill shows how the stroke is overlaid on the shape.</p> <pre>&lt;v:background fillcolor="yellow"/&gt; &lt;v:shape style="width:60;height:50"   strokecolor="red" fillcolor="lime"   path="m 0,0 l 0,1000 1000,1000 1000,0 x e"&gt;   &lt;v:stroke filltype="pattern" weight="10pt"     src="myimage.gif" color2="blue"/&gt; &lt;/v:shape&gt;</pre> <div data-bbox="414 1241 594 1402" data-label="Image"> </div> <p>, where myimage.gif is: </p> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_ColorType simple type (§20.1.2.3).</p> |
| <p>dashstyle (Stroke Dash Pattern)</p>         | <p>Specifies the dot and dash pattern for a stroke. Default is solid. Pre-defined values are:</p> <ul style="list-style-type: none"> <li>• solid</li> <li>• shortdash</li> <li>• shortdot</li> <li>• shortdashdot</li> <li>• shortdashdotdot</li> <li>• dot</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        |

| Attributes                    | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|-------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                               | <ul style="list-style-type: none"> <li>• dash</li> <li>• longdash</li> <li>• dashdot</li> <li>• longdashdot</li> <li>• longdashdotdot</li> </ul> <p>A custom-defined dash pattern can also be specified using a series of numbers. These define the length of the dash (the drawn part of the stroke) and the length of the space between the dashes. The lengths are relative to the line width: a length of 1 is equal to the line width. The endcap style is applied to each dash but the arrow style is not. The string defines the length of the dash then the length of the space. This can be repeated to form complex dash styles. The string should always contain a pair of numbers; if it contains an odd number of numbers the last is disregarded. 0 implies a dot that is fourfold symmetrical (with round end caps, this is a circle).</p> <p>[Example:</p> <pre>&lt;v:stroke dashstyle="0 2" weight="3pt"   endcap="round"&gt; &lt;/v:stroke&gt;</pre>  <pre>&lt;v:stroke dashstyle="longdashdotdot"   weight="2pt"&gt; &lt;/v:stroke&gt;</pre>  <p>end example]</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p> |
| endarrow (Line End Arrowhead) | <p>Specifies an arrowhead for the end of a line. Default is none. The path shall not be closed with the x command for the arrowhead to show. Allowed values are:</p> <ul style="list-style-type: none"> <li>• none</li> <li>• block</li> <li>• classic</li> <li>• diamond</li> <li>• oval</li> <li>• open</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| miterlimit (Miter Joint Limit) | <p>Specifies the smoothness of the miter joint, or the maximum distance between the inner point and outer point of a joint. This number is a multiple of the thickness of the line. Default is 8.</p>                                                                                                                                                                                                                                                                                                                                                   |

| Attributes               | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|--------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                          | <p>[Example:</p> <pre>&lt;v:stroke joinstyle="miter" weight="10pt"   miterlimit="2"&gt; &lt;/v:stroke&gt;</pre>  <p>end example]</p> <p>The possible values for this attribute are defined by the W3C XML Schema decimal datatype.</p>                                                                                                                                                                                                        |
| on (Stroke Toggle)       | <p>Specifies whether the stroke is displayed. Default is true. This attribute overrides the shape's stroke attribute.</p> <p>[Example:</p> <pre>&lt;v:rect style="width:50;height:50" stroked="true"   fillcolor="lime" strokecolor="red"&gt;   &lt;v:stroke on="false" weight="5pt"/&gt; &lt;/v:rect&gt;</pre>  <p>end example]</p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p> |
| opacity (Stroke Opacity) | <p>Specifies the amount of transparency of a stroke. Default is 1.0.</p> <p>[Example:</p> <pre>&lt;v:rect style="width:50;height:50"   fillcolor="lime" strokecolor="red"&gt;   &lt;v:stroke weight="5pt" opacity="50%"/&gt; &lt;/v:rect&gt;</pre>                                                                                                                                                                                          |

| Attributes                                            | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
|-------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                       | <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <p>src (Stroke Image Location)</p>                    | <p>Specifies the source image to load for a stroke fill. Default is no value.</p> <p>[Example:</p> <pre>&lt;v:stroke ... src="myimage.gif" ... &gt; &lt;/v:stroke&gt;</pre> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                                                                                                                                                                                                                                               |
| <p>startarrow (Line Start Arrowhead)</p>              | <p>Specifies an arrowhead for the start of a line. Default is none. The path shall not be closed with the x command for the arrowhead to show. Allowed values are:</p> <ul style="list-style-type: none"> <li>• none</li> <li>• block</li> <li>• classic</li> <li>• diamond</li> <li>• oval</li> <li>• open</li> </ul> <p>[Example:</p> <pre>&lt;v:stroke startarrow="classic"/&gt;</pre>  <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_StrokeArrowType simple type (§19.1.3.8).</p> |
| <p>startarrowlength (Line Start Arrowhead Length)</p> | <p>Specifies the length of the arrowhead at the start of a line. Default is medium. Allowed values are:</p> <ul style="list-style-type: none"> <li>• short</li> <li>• medium</li> <li>• long</li> </ul> <p>[Example:</p>                                                                                                                                                                                                                                                                                                                                                                                              |

| Attributes                                      | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                |
|-------------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                 | <p><code>&lt;v:stroke ... startarrowlength="long" ... /&gt;</code></p>  <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_StrokeArrowLength simple type (§19.1.3.7).</p>                                                                                                                                                                                                                         |
| startarrowwidth<br>(Line Start Arrowhead Width) | <p>Specifies the width of the arrowhead at the start of a line. Default is medium. Allowed values are:</p> <ul style="list-style-type: none"> <li>• narrow</li> <li>• medium</li> <li>• wide</li> </ul> <p>[Example:</p> <p><code>&lt;v:stroke ... startarrowwidth="wide" ... /&gt;</code></p>  <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_StrokeArrowWidth simple type (§19.1.3.9).</p> |
| title (Stroke Title)                            | <p>Specifies the title of an embedded stroke image. This is typically set to the comment property of the image, which is often blank.</p> <p>[Example:</p> <p><code>&lt;v:fill ... o:title="alt text" ... &gt;</code><br/> <code>&lt;/v:fill&gt;</code></p> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                                                                    |
| weight (Stroke Weight)                          | <p>Specifies the thickness of a stroke. Default is 1. This attribute overrides the shape's strokeweight attribute.</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                                                                                                                                                                                                                                    |

[Note: The W3C XML Schema definition of this element's content model ([CT\\_StrokeChild](#)) is located in §A.6.2.  
end note]

### 19.2.2.2 callout (Callout)

This element specifies the automatic behavior and layout parameters of callout shapes. Callout shapes are standard VML shapes that behave as callouts, providing an additional callout object which can be used to point at another location:

[Example: Consider the following VML shape:

If this shape is made a callout shape by adding the callout element to its shape definition, then the shape has a callout object, for example:

end example]

| Attributes                            | Description                                                                                                                                                                                                                                                                                                                                                                |
|---------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| accentbar (Callout accent bar toggle) | Specifies whether an accent bar is used with the callout. Default is <code>false</code> .<br><br>The possible values for this attribute are defined by the <code>ST_TrueFalse</code> simple type (§20.1.2.5).                                                                                                                                                              |
| angle (Callout angle)                 | Specifies the angle that the callout makes with respect to the bounding box of the shape. Default is no value.<br><br>The possible values for this attribute are defined by the <code>ST_Angle</code> simple type (§19.2.3.2).                                                                                                                                             |
| distance (Callout drop distance)      | Specifies the drop distance of a callout. The drop distance of a callout is measured from the edge of the shape where the pointer line starts and continues the absolute length of the distance value. If specified with no units, EMUs are assumed. Default is no value.<br><br>The possible values for this attribute are defined by the W3C XML Schema string datatype. |
| drop (Callout drop position)          | Specifies where the drop of a callout is placed.<br><br>The possible values for this attribute are defined by the <code>ST_CalloutDrop</code> simple type (§19.2.3.4).                                                                                                                                                                                                     |

| Attributes                                                                               | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |

| Attributes          | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              |
|---------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| v (Path Definition) | <p>Specifies a string containing the commands that define the shape's path. This value consists of commands followed by zero or more parameters. Default is no value.</p> <p>The following rules apply to path strings:</p> <ul style="list-style-type: none"> <li>Commas or spaces delimit parameters for each command. Both "m 0,0" and "m0 0" are acceptable.</li> <li>A parameter that is omitted using commas is treated as having a value of zero. Thus, "c 10,10,0,0,25,13" and "c 10,10,,,25,13" are equivalent.</li> <li>Parameterized paths are also allowed. In this case, the shape shall also have a formulas element (§19.1.2.6) with a list of formulas that are substituted into the path using the @ symbol followed by the number of the formula. The adj property of the shape contains the input parameters for these formulas. For example, "moveto @1@4". The evaluations of the formulas are substituted into the appropriate positions. @ also serves as a delimiter.</li> </ul> |

|            | The allowed commands are given below. An asterisk (*) indicates that the command is allowed to be repeated. For the qb command, the controlpoint parameter is also allowed to be repeated. |          |            |                                                                                                                                                                                      |
|            | Command                                                                                                                                                                                    | Name     | Parameters | Description                                                                                                                                                                          |
|            | m                                                                                                                                                                                          | moveto   | 2          | Start a new sub-path at the given (x,y) coordinate.                                                                                                                                  |
|            | l                                                                                                                                                                                          | lineto   | 2*         | Draw a line from the current point to the given (x,y) coordinate which becomes the new current point. Specifying a number of coordinate pairs forms a polyline.                      |
|            | c                                                                                                                                                                                          | curveto  | 6*         | Draw a cubic bézier curve from the current point to the coordinate given by the final two parameters. The control points are given by the first four parameters.                     |
|            | x                                                                                                                                                                                          | close    | 0          | Close the current sub-path by drawing a straight line from the current point to the original moveto point.                                                                           |
|            | e                                                                                                                                                                                          | end      | 0          | End the current set of sub-paths. A given set of sub-paths (as delimited by end) is filled. Subsequent sets of sub-paths are filled independently and superimposed on existing ones. |
|            | t                                                                                                                                                                                          | rmoveto  | 2*         | Start a new sub-path at a coordinate relative to the current point, cp (cpx+x, cpy+y).                                                                                               |
|            | r                                                                                                                                                                                          | rlineto  | 2*         | Draw a line from the current point to the given relative coordinate (cpx+x, cpy+y).                                                                                                  |
|            | v                                                                                                                                                                                          | rcurveto | 6*         | Cubic bézier curve using the given coordinate relative to the current point.                                                                                                         |

|            | ns                                                                                                                                                                                         | nostroke | 0          | The current set of sub-paths (delimited by e) is not stroked.                                                                                                                        |

| Attributes | Description |                     |    |                                                                                                                                                                                                                                                                                                                                                                                                                                                             |
|------------|-------------|---------------------|----|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|            | ae          | angleellipseto      | 6* | Draws a segment of an ellipse as described using these parameters. A straight line is drawn from the current point to the start point of the segment. The parameters are: center (x,y), size(w,h), start angle, end angle.                                                                                                                                                                                                                                  |
|            | al          | angleellipse        | 6* | Same as angleellipseto except that there is an implied moveto the starting point of the segment.                                                                                                                                                                                                                                                                                                                                                            |
|            | at          | arcto               | 8* | A segment of the ellipse is drawn which starts at the angle defined by the start radius vector and ends at the angle defined by the end vector. A straight line is drawn from the current point to the start of the arc. The arc is always drawn in a counterclockwise direction. The parameters are: left, top, right, bottom, start(x,y), end(x,y). The first four values define the bounding box of an ellipse. The last four define two radial vectors. |
|            | ar          | arc                 | 8* | Same as arcto except there is an implied moveto the start point of the arc.                                                                                                                                                                                                                                                                                                                                                                                 |
|            | wa          | clockwisearco       | 8* | Same as arcto but the arc is drawn in a clockwise direction.                                                                                                                                                                                                                                                                                                                                                                                                |
|            | wr          | clockwisearc        | 8* | Same as arc but the arc is drawn in a clockwise direction                                                                                                                                                                                                                                                                                                                                                                                                   |
|            | qx          | ellipticalquadrantx | 2* | A quarter ellipse is drawn from the current point to the given end point. The elliptical segment is initially tangential to a line parallel to the x-axis. (i.e. the segment starts out horizontal). The parameters are: end(x,y).                                                                                                                                                                                                                          |
|            | qy          | ellipticalquadranty | 2* | Same as ellipticalquadrantx except that the elliptical segment is initially tangential to a line parallel to the y-axis (i.e. the segment starts out vertical).                                                                                                                                                                                                                                                                                             |

| Attributes | Description                                                                               |                 |      |                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|------------|-------------------------------------------------------------------------------------------|-----------------|------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|            | qb                                                                                        | quadraticbezier | 2+2* | Defines one or more quadratic bézier curves by means of control points and an end point. Intermediate (on-curve) points are obtained by interpolation between successive control points as in the OpenType font specification. The sub-path need not be started in which case the sub-path is closed. In this case the last point of the sub-path defines the start point of the quadratic bézier. The parameters are: controlpoint(x,y)*, end(x,y). |
|            | The possible values for this attribute are defined by the W3C XML Schema string datatype. |                 |      |                                                                                                                                                                                                                                                                                                                                                                                                                                                      |

[Note: The W3C XML Schema definition of this element's content model ([CT\\_ClipPath](#)) is located in §A.6.2. *end note*]

#### 19.2.2.4 colormenu (UI Default Colors)

This element determines the default colors for different types of colors that can be applied to VML shapes.

[*Rationale*: An application can choose to retain default colors or the last color choices a user made and present those in parts of its user interface. *end rationale*]

[*Example*:

```
<o:shapedefaults ... >
  <o:colormenu v:ext="edit" fillcolor="none" extrusioncolor="#36f"/>
</o:shapedefaults>
```

*end example*]

| Attributes                                                                               | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

Default is "#000000".                                                                                                                                                                                                                                                                                                                                                                                                    |

| Attributes                         | Description                                                                                                                                                                           |
|------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| (Default extrusion color)          | The possible values for this attribute are defined by the ST_ColorType simple type (§20.1.2.3).                                                                                       |
| fillcolor (Default fill color)     | The default color associated with the fill of a VML shape. Default is "#0000FF".<br>The possible values for this attribute are defined by the ST_ColorType simple type (§20.1.2.3).   |
| shadowcolor (Default shadow color) | The default color associated with the shadow of a VML shape. Default is "#80800C".<br>The possible values for this attribute are defined by the ST_ColorType simple type (§20.1.2.3). |
| strokecolor (Default stroke color) | The default color associated with the stroke of a VML shape. Default is "#FFFF00".<br>The possible values for this attribute are defined by the ST_ColorType simple type (§20.1.2.3). |

[Note: The W3C XML Schema definition of this element's content model ([CT\\_ColorMenu](#)) is located in §A.6.2.  
*end note*]

#### 19.2.2.5 colormru (Most Recently Used Colors)

This element defines a list of up to eight colors which represent the colors most recently used by the user.

[*Rationale*: An application can choose to retain the last color choices a user made, regardless of where on VML shapes they are used, and present those in parts of its user interface. *end rationale*]

[*Example*:

```
<o:shapedefaults ... >
  <o:colormru v:ext="edit" colors="#a01aae,#456b69,#06f,#a1ae24,#d57811"/>
</o:shapedefaults>
```

*end example*]

| Attributes             | Description                                                                                                                                                                                                                                                                                                                                                        |
|------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| colors (Recent colors) | A comma-separated list of up to eight most recently used colors. Default is no value. Colors should be defined using hexadecimal notation - see the ST_ColorType simple type (§20.1.2.3) for a full description.<br><br>[ <i>Example</i> :<br><br><pre>&lt;o:colormru v:ext="edit"   colors="#a01aae,#456b69,#06f,#a1ae24,#d57811"/&gt;</pre> <i>end example</i> ] |

| Attributes                                                                               | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 |

[*Note*: The W3C XML Schema definition of this element's content model ([CT\\_ColorMru](#)) is located in §A.6.2. *end note*]

#### 19.2.2.6 column (Text Box Interior Stroke)

This element specifies the stroke properties for the interior border of a text box. It entirely supercedes its parent stroke element if its on attribute is true. Thus the default value of an unspecified attribute overrides a value specified in the parent. If the on attribute is false or not specified, the border is not shown. [*Note*: This element is ignored if an implementation does not support multi-column text boxes. *end note*]

[*Example*: The text box borders are set independently. Note that the bottom border does not inherit the weight from the parent stroke element.

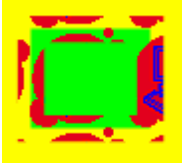

```
<v:stroke weight="2.25pt">
  <o:left v:ext="view" dashstyle="1 1" color="blue" weight="5pt" on="t"/>
  <o:top v:ext="view" color="black" weight="2.25pt" on="t"/>
  <o:right v:ext="view" dashstyle="1 1" color="blue" weight="5pt" on="t"/>
  <o:bottom v:ext="view" color="black" on="t"/>
  <o:column v:ext="view" color="#f60" on="t"/>
</v:stroke>
```

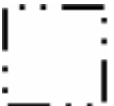

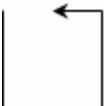

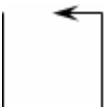

*end example*]

|                                 |   <p>, where myimage.gif is:</p> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_ColorType simple type (§20.1.2.3).</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
| dashstyle (Stroke Dash Pattern) | <p>Specifies the dot and dash pattern for a stroke. Default is solid. Pre-defined values are:</p> <ul style="list-style-type: none"> <li>• solid</li> <li>• shortdash</li> <li>• shortdot</li> <li>• shortdashdot</li> <li>• shortdashdotdot</li> <li>• dot</li> <li>• dash</li> <li>• longdash</li> <li>• dashdot</li> <li>• longdashdot</li> <li>• longdashdotdot</li> </ul> <p>A custom-defined dash pattern can also be specified using a series of numbers. These define the length of the dash (the drawn part of the stroke) and the length of the space between the dashes. The lengths are relative to the line width: a length of 1 is equal to the line width. The endcap style is applied to each dash but the arrow style is not. The string defines the length of the dash then the length of the space. This can be repeated to form complex dash styles. The string should always contain a pair of numbers; if it contains an odd number of numbers the last is disregarded. 0 implies a dot that is fourfold symmetrical (with round end caps, this is a circle).</p> <p><i>[Example:</i></p> <pre>&lt;v:stroke dashstyle="0 2" weight="3pt"   endcap="round"&gt; &lt;/v:stroke&gt;</pre>  <pre>&lt;v:stroke dashstyle="longdashdotdot"   weight="2pt"&gt; &lt;/v:stroke&gt;</pre> |

| Attributes                                 | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |

| <p>joinstyle (Line End Join Style))</p> | <p>Specifies the join style for line ends. Default is round.</p> <ul style="list-style-type: none"> <li>• round</li> <li>• bevel</li> <li>• miter</li> </ul> <p>[Example:</p> <pre>&lt;v:polyline strokeweight="10pt" strokecolor="navy"   points="10pt,10pt,50pt,50pt,90pt,10pt"&gt;   &lt;v:stroke joinstyle="bevel"/&gt; &lt;/v:polyline&gt;</pre> <div style="display: flex; align-items: center; margin-top: 10px;">  <div style="margin-left: 20px;"> <p>joinstyle="round"</p> <p>joinstyle="bevel"</p> <p>joinstyle="miter"</p> </div> </div> <p>end example]</p> <p>The possible values for this attribute are defined by the ST_StrokeJoinStyle simple type (§19.1.3.11).</p> |
| <p>linestyle (Stroke Line Style)</p>    | <p>Specifies the line style of the stroke. Default is single.</p> <ul style="list-style-type: none"> <li>• single</li> <li>• thinThin</li> <li>• thinThick</li> <li>• thickThin</li> <li>• thickBetweenThin</li> </ul>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    |

| Attributes                            | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      |
|---------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                       | <p>[Example:</p> <pre>&lt;v:stroke linestyle="thickThin" weight="5pt"&gt; &lt;/v:stroke&gt;</pre>  <p>end example]</p> <p>The possible values for this attribute are defined by the ST_StrokeLineStyle simple type (§19.1.3.12).</p>                                                                                                                                                                                                            |
| <p>miterlimit (Miter Joint Limit)</p> | <p>Specifies the smoothness of the miter joint, or the maximum distance between the inner point and outer point of a joint. This number is a multiple of the thickness of the line. Default is 8.</p> <p>[Example:</p> <pre>&lt;v:stroke jointstyle="miter" weight="10pt"   miterlimit="2"&gt; &lt;/v:stroke&gt;</pre>  <p>end example]</p> <p>The possible values for this attribute are defined by the W3C XML Schema decimal datatype.</p> |
| <p>on (Stroke Toggle)</p>             | <p>Specifies whether the stroke is displayed. Default is true. This attribute overrides the shape's stroke attribute.</p> <p>[Example:</p> <pre>&lt;v:rect style="width:50;height:50" stroked="true"   fillcolor="lime" strokecolor="red"&gt;   &lt;v:stroke on="false" weight="5pt"/&gt; &lt;/v:rect&gt;</pre>  <p>end example]</p>                                                                                                          |

| Attributes                               | Description                                                                                                                                                                                                                                                                                                                                                                                                                                               |
|------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                          | <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p>                                                                                                                                                                                                                                                                                                                                                    |
| <p>opacity (Stroke Opacity)</p>          | <p>Specifies the amount of transparency of a stroke. Default is 1.0.</p> <p>[Example:</p> <pre>&lt;v:rect style="width:50;height:50"   fillcolor="lime" strokecolor="red"&gt;   &lt;v:stroke weight="5pt" opacity="50%"/&gt; &lt;/v:rect&gt;</pre>  <p>end example]</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p> |
| <p>src (Stroke Image Location)</p>       | <p>Specifies the source image to load for a stroke fill. Default is no value.</p> <p>[Example:</p> <pre>&lt;v:stroke ... src="myimage.gif" ... &gt; &lt;/v:stroke&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                                                                                          |
| <p>startarrow (Line Start Arrowhead)</p> | <p>Specifies an arrowhead for the start of a line. Default is none. The path shall not be closed with the x command for the arrowhead to show. Allowed values are:</p> <ul style="list-style-type: none"> <li>• none</li> <li>• block</li> <li>• classic</li> <li>• diamond</li> <li>• oval</li> <li>• open</li> </ul> <p>[Example:</p> <pre>&lt;v:stroke startarrow="classic"/&gt;</pre>                                                                 |

| Attributes                                                  | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         |
|-------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                                             |  <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_StrokeArrowType simple type (§19.1.3.8).</p>                                                                                                                                                                                                                                                                                           |
| <b>startarrowlength</b><br>(Line Start<br>Arrowhead Length) | <p>Specifies the length of the arrowhead at the start of a line. Default is medium. Allowed values are:</p> <ul style="list-style-type: none"> <li>• short</li> <li>• medium</li> <li>• long</li> </ul> <p>[Example:</p> <pre>&lt;v:stroke ... startarrowlength="long" ... /&gt;</pre>  <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_StrokeArrowLength simple type (§19.1.3.7).</p> |
| <b>startarrowwidth</b><br>(Line Start<br>Arrowhead Width)   | <p>Specifies the width of the arrowhead at the start of a line. Default is medium. Allowed values are:</p> <ul style="list-style-type: none"> <li>• narrow</li> <li>• medium</li> <li>• wide</li> </ul> <p>[Example:</p> <pre>&lt;v:stroke ... startarrowwidth="wide" ... /&gt;</pre>  <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_StrokeArrowWidth simple type (§19.1.3.9).</p>  |

| Attributes             | Description                                                                                                                                                                                                                                                                                                                                           |
|------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| title (Stroke Title)   | <p>Specifies the title of an embedded stroke image. This is typically set to the comment property of the image, which is often blank.</p> <p>[Example:</p> <pre>&lt;v:fill ... o:title="alt text" ... &gt; &lt;/v:fill&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p> |
| weight (Stroke Weight) | <p>Specifies the thickness of a stroke. Default is 1. This attribute overrides the shape's strokeweight attribute.</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                                                               |

[Note: The W3C XML Schema definition of this element's content model ([CT\\_StrokeChild](#)) is located in §A.6.2. end note]

#### 19.2.2.7 complex (Complex)

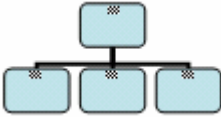

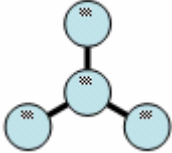

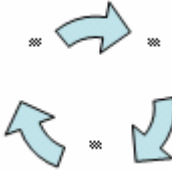

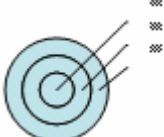

This element specifies that a shapetype contains fragments.

| Attributes                                  | Description                                                                                                                                                                                                                                                                                      |
|---------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| ext (VML Extension Handling Behavior)       | <p>Specifies an optional value that indicates how applications that implement VML should interpret extensions not defined as part of the original specification of core VML.</p>                                                                                                                 |
| Namespace:<br>urn:schemas-microsoft-com:vml | <p>[Rationale: This part of the original VML specification is included to assist applications that leverage existing VML support in implementing the Office Open XML Format. end rationale]</p> <p>The possible values for this attribute are defined by the ST_Ext simple type (§19.1.3.2).</p> |

[Note: The W3C XML Schema definition of this element's content model ([CT\\_Complex](#)) is located in §A.6.2. end note]

#### 19.2.2.8 diagram (VML Diagram)

This element specifies semantic information for a limited set of structured diagrams that have VML representations. Diagrams should be defined using DrawingML; this representation is included for compatibility with applications that rely on VML. The following diagram types have VML representations:

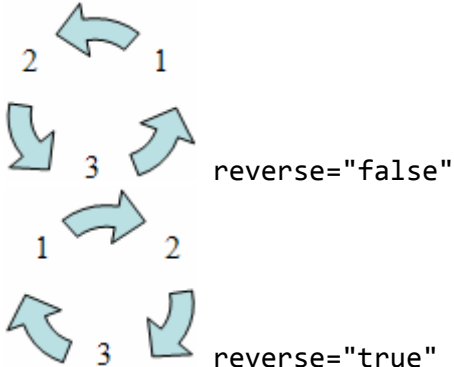

| Diagram Type       | Example (non-normative)                                                             |
|--------------------|-------------------------------------------------------------------------------------|
| Organization chart |    |
| Radial             |    |
| Cycle              |    |
| Pyramid            |    |
| Venn               |   |
| Bulls-eye          |  |

Each of these types of diagrams contains shapes that are positioned relative to one another. Each shape also has optional associated text.

| Attributes                               | Description                                                                                                                                                                                                                                                                                                                                           |
|------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| autoformat<br>(Diagram Automatic Format) | <p>Specifies whether the diagram is formatted automatically by the application and user overrides are locked. Default is false.</p> <p>[Example:</p> <pre>&lt;o:diagram ... autoformat="true"&gt; &lt;/o:diagram&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p> |

| Attributes                                   | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                            |
|----------------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| autolayout<br>(Diagram Automatic Layout)     | <p>Specifies whether the diagram elements are laid out automatically by the application and user overrides are locked. Default is true.</p> <p>[Example:</p> <pre>&lt;o:diagram ... autolayout="false"&gt; &lt;/o:diagram&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p>                                                                                                                         |
| constrainbounds<br>(Diagram Layout Extents)  | <p>Specifies an optional, application-specific parameter related to the diagram's extents intended to be used by the application to assist laying out the diagram.</p> <p>[Example:</p> <pre>&lt;o:diagram ... constrainbounds="2910,2696,9773,9558"&gt; &lt;/o:diagram&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                 |
| dgmbasetextscale<br>(Diagram Base Font Size) | <p>Specifies the diagram's original font size. This is used in subsequent font size recalculations. If the most recent diagram font size is used to calculate the font size after a rescale, the font size would be wrong after non-isometric diagram rescalings.</p> <p>[Example:</p> <pre>&lt;o:diagram ... dgmbasetextscale="12"&gt; &lt;/o:diagram&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the W3C XML Schema integer datatype.</p> |
| dgmfontsize<br>(Diagram Font Size)           | <p>Specifies the font size for attached text when a new diagram node is added.</p> <p>[Example:</p> <pre>&lt;o:diagram ... dgmfontsize="12"&gt; &lt;/o:diagram&gt;</pre> <p>end example]</p>                                                                                                                                                                                                                                                                                           |

| Attributes                                                                      | Description                                                                                                                                                                                                                                                                                                                                                                                                 |

| <p>dgmscalex<br/>(Diagram Layout X Scale)</p>                                   | <p>Specifies an optional, application-specific parameter related to the horizontal scaling of the diagram that is intended to be used by the application to assist laying out the diagram.</p> <p>[Example:</p> <pre>&lt;o:diagram ... dgmscalex="50000"&gt; &lt;/o:diagram&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the W3C XML Schema integer datatype.</p> |
| <p>dgmscaley<br/>(Diagram Layout Y Scale)</p>                                   | <p>Specifies an optional, application-specific parameter related to the vertical scaling of the diagram that is intended to be used by the application to assist laying out the diagram.</p> <p>[Example:</p> <pre>&lt;o:diagram ... dgmscaley="75000"&gt; &lt;/o:diagram&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the W3C XML Schema integer datatype.</p>   |
| <p>dgmstyle (Diagram Style Options)</p>                                         | <p>Specifies an optional, application-specific parameter related to the styling of the diagram that is intended to be used by the application to assist in formatting the diagram.</p> <p>[Example:</p> <pre>&lt;o:diagram ... dgmstyle="1"&gt; &lt;/o:diagram&gt;</pre> <p>end example]</p> <p>The possible values for this attribute are defined by the W3C XML Schema integer datatype.</p>              |
| <p>ext (VML Extension Handling Behavior)</p> <p>Namespace:<br/>urn:schemas-</p> | <p>Specifies an optional value that indicates how applications that implement VML should interpret extensions not defined as part of the original specification of core VML.</p> <p>[Rationale: This part of the original VML specification is included to assist applications that leverage existing VML support in implementing the Office Open XML Format. end</p>                                       |

| Attributes                          | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                    |
|-------------------------------------|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| microsoft-com:uml                   | <p><i>rationale</i>]</p> <p>The possible values for this attribute are defined by the ST_Ext simple type (§19.1.3.2).</p>                                                                                                                                                                                                                                                                                                                                      |
| reverse (Diagram Reverse Direction) | <p>Specifies whether the order of the diagram nodes is reversed. This is only relevant to diagrams that have linear ordering.</p> <p>[Example:</p> <pre data-bbox="451 548 902 611">&lt;o:diagram ... reverse="true"&gt; &lt;/o:diagram&gt;</pre>  <p>end example</p> <p>The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).</p> |

[Note: The W3C XML Schema definition of this element's content model ([CT\\_Diagram](#)) is located in §A.6.2. end note]

#### 19.2.2.9 entry (Regroup Entry)

This element specifies a single entry in a regrouptable (§19.2.2.23). Each entry is a pair mapping a current regroupid value to an old one. This is used to restore regrouping information on the regrouped object. A value of zero indicates no previous group.

[Example: The zero value of the old attribute indicates that if the shapes with regroupid 1 are regrouped, the restored group was not previously grouped with any other shapes:

```
<o:regrouptable v:ext="edit">
  <o:entry new="1" old="0"/>
</o:regrouptable>
```

end example]

| Attributes         | Description                                                                                                                                |
|--------------------|--------------------------------------------------------------------------------------------------------------------------------------------|
| new (New Group ID) | Specifies the ID of the new group. Default is 0.<br>The possible values for this attribute are defined by the W3C XML Schema int datatype. |
| old (Old Group ID) | Specifies the ID of the old group. Default is 0.<br>The possible values for this attribute are defined by the W3C XML Schema int datatype. |

[*Note:* The W3C XML Schema definition of this element's content model (CT\_Entry) is located in §A.6.2. *end note*]

#### 19.2.2.10 `equationxml` (Storage for Alternate Math Content)

This element specifies XML markup for mathematical text which can be used in place of the shape data. [*Note:* Applications are encouraged to use an open format, such as the Math format defined in ISO/IEC 29500-1, or the MathML format, a Recommendation from the World Wide Web Consortium, available at <http://www.w3.org/TR/MathML/>. *end note*]

[*Example:* Consider a VML object which specifies alternate math content using MathML. This object might contain the following XML markup:

```
<v:shape>
...
<o:equationXml contentType="mathml">
  <mrow>
    <mrow>
      <msup>
        <mi>x</mi>
        <mn>2</mn>
      </msup>
      <mo>+</mo>
      <mrow>
        <mn>4</mn>
        <mo>*</mo>
        <mi>x</mi>
      </mrow>
      <mo>+</mo>
      <mn>4</mn>
    </mrow>
    <mo>=</mo>
    <mn>0</mn>
  </mrow>
</o:equationXml>
</v:shape>
```

The embedded MathML markup is stored within the `equationxml` element. *end example*

If a producer that wants interoperability supports equations, it should use one of the following standard formats:

- Office Open XML Math (Part 1, §22.1)
- W3C MathML 2.0

| Attributes                                              | Description                                                                                                                                                                                                                                                 |
|---------------------------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| contentType<br>(Content Type of Alternate Math Content) | Specifies the syntax of the markup used for the alternate math content stored in the <code>equationxml</code> attribute.<br><br>The possible values for this attribute are defined by the <code>ST_AlternateMathContentType</code> simple type (§19.2.3.1). |

[Note: The W3C XML Schema definition of this element's content model ([CT\\_EquationXml](#)) is located in §A.6.2. *end note*]

#### 19.2.2.11 extrusion (3D Extrusion)

This element specifies a parallel or perspective extrusion of a 2-D shape, creating the appearance of a 3-D shape. Lighting is controlled via two independent point light sources. Extrusions are defined as either perspective or parallel.

[Example:

```
<v:polyline points="0pt,75pt 20pt,45pt 10pt,50pt 30pt,10pt
  50pt,50pt 40pt,45pt 60pt,75pt 0pt,75pt" fillcolor="#00a000">
  <o:extrusion on="t" backdepth="20pt"
    lightposition="30000,10000,10000"/>
</v:polyline>
```

*end example*

| Attributes                                        | Description                                                                                                                                                                                                                                                                                                |
|---------------------------------------------------|------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| autorotationcenter<br>(Center of Rotation Toggle) | Specifies whether the center of rotation is the geometric center of the extrusion. Default is <code>false</code> . If <code>true</code> , the geometric center of an extruded shape is (0,0,0). If <code>false</code> , the center of rotation is determined by the <code>rotationcenter</code> attribute. |

| Attributes                              | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       |
|-----------------------------------------|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                         | The possible values for this attribute are defined by the ST_TrueFalse simple type (§20.1.2.5).                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   |
| backdepth<br>(Backward Extrusion Depth) | <p>Specifies the amount of backward extrusion. Default is 36 pt, default units are points.</p> <p>[Example:</p> <pre data-bbox="451 472 1096 541">&lt;o:extrusion on="true" backdepth="15pt"&gt; &lt;/o:extrusion&gt;</pre>  <p>end example]</p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                                                                                                                                                                                                                                                                |
| brightness<br>(Brightness)              | <p>Specifies the overall brightness of a scene. Default is 0.3. This numeric value can also be specified in 1/65536-ths if a trailing "f" is supplied (as "f" indicates the value is a fraction). For example, a value of "52429f" represents 52429/65536 or 0.8.</p> <p>This quantity is not specified using units. The numeric values are in the range 0 to 1 (0f to 65536f), where 0 implies darkness and 1 implies light saturation.</p> <p>[Example:</p> <pre data-bbox="451 1207 1096 1276">&lt;o:extrusion on="true" brightness="0.4"&gt; &lt;/o:extrusion&gt;</pre>  <p>brightness="0"</p> <p>brightness="25000f"</p> <p>brightness="0.4"</p> <p>brightness="0.75"</p> |

| Attributes                              | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-----------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                                         | <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p>                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
| <p>color (Extrusion Color)</p>          | <p>Specifies the color of the extrusion faces. This attribute is only used when colormode is custom. Colors are typically specified as either a named color, such as red, or six hexadecimal digits representing the red, green and blue values of the color, such as #00FF30. Full details are specified in the simple type description.</p> <p>[Example:</p> <pre data-bbox="451 688 1015 787">&lt;o:extrusion on="true" color="lime"   colormode="custom"&gt; &lt;/o:extrusion&gt;</pre>  <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_ColorType simple type (§20.1.2.3).</p> |
| <p>colormode (Extrusion Color Mode)</p> | <p>Specifies whether the extrusion color is defined by the color attribute or is the same as the shape's fill color. Default is auto.</p> <p>[Example:</p> <pre data-bbox="451 1331 1015 1430">&lt;o:extrusion on="true" color="lime"   colormode="auto"&gt; &lt;/o:extrusion&gt;</pre>  <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the ST_ColorMode simple type (§19.2.3.6).</p>                                                                                                                                                                                                   |
| <p>diffusivity (Diffuse Reflection)</p> | <p>Specifies the amount of diffusion of reflected light from an extruded shape, defined as the ratio of incident light to diffused reflected light. Default is 1. Normal values are in the range 0 to 1. This numeric value can also be specified in 1/65536-ths if a trailing "f" is</p>                                                                                                                                                                                                                                                                                                                                                                                                                       |

| Attributes             | Description                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
|                        | <p>supplied (as "f" indicates the value is a fraction). <i>[Example: A value of "52429f" represents 52429/65536 or 0.8. end example]</i></p> <p>This quantity is not specified using units. The numeric values are in the range 0 to 1 (0f to 65536f), where 0 implies all reflected light is diffuse and 1 implies no reflected light is diffuse.</p> <p>Specularity and diffusity should be considered together as it is possible, though physically incorrect, to define more reflected light than incident light. This is the case if the amount of specularly reflected light and diffusely reflected light add up to more than the amount of incident light.</p> <p><i>[Example:</i></p> <pre data-bbox="456 747 1081 810">&lt;o:extrusion on="true" diffusity=".75"&gt; &lt;/o:extrusion&gt;</pre> <div data-bbox="456 848 862 1430">  <p>diffusity="0"</p> <p>diffusity="0.5"</p> <p>diffusity="0.75"</p> <p>diffusity="1"</p> </div> <p><i>end example]</i></p> <p>The possible values for this attribute are defined by the W3C XML Schema string datatype.</p> |
| edge (Simulated Bevel) | <p>Specifies the apparent bevel of the extrusion edges.
